

# First-rank FCP\_FGT\_AD-7.6 Practice Materials Stand for Perfect Exam Dumps - BraindumpsVCE

- C. Combine multiple incentives into a single deposit.
- D. Classify transaction data by product group.

Answer: A,C

## NEW QUESTION # 65

What does the system do when Payment Threshold is enabled?

- A. The system will NOT track negative payments as balances once the period is finalized.
- B. The system will NOT generate payments for held deposits until they are released.
- C. The system will NOT generate payments less than or equal to the payment threshold.
- D. The system will NOT generate payments greater than or equal to the payment threshold.

Answer: C

What's more, part of that BraindumpsVCE FCP\_FGT\_AD-7.6 dumps now are free: [https://drive.google.com/open?id=1O14h3Rw-D\\_W2PQbtwvJujEPnDtnoIDMa](https://drive.google.com/open?id=1O14h3Rw-D_W2PQbtwvJujEPnDtnoIDMa)

The FCP\_FGT\_AD-7.6 exam prep from our company will offer the help for you to develop your good study habits. If you buy and use our FCP\_FGT\_AD-7.6 study materials, you will cultivate a good habit in study. More importantly, the good habits will help you find the scientific prop learning methods and promote you study efficiency, and then it will be conducive to helping you pass the FCP\_FGT\_AD-7.6 Exam in a short time. So hurry to buy the FCP\_FGT\_AD-7.6 test guide from our company, you will benefit a lot from it.

## Fortinet FCP\_FGT\_AD-7.6 Exam Syllabus Topics:

Topic	Details
Topic 1	<ul style="list-style-type: none"> <li>• Deployment and system configuration: This section of the exam measures the skills of network security engineers and covers essential tasks for setting up a FortiGate device in a production environment. Candidates are expected to perform the initial configuration, establish basic connectivity, and integrate the device within the Fortinet Security Fabric. They must also be able to configure a FortiGate Cluster Protocol (FGCP) high availability setup and troubleshoot resource and connectivity issues to ensure system readiness and network uptime.</li> </ul>

Topic 2	<ul style="list-style-type: none"> <li>• VPN: This section of the exam measures the skills of network security engineers and covers the configuration and deployment of Virtual Private Network (VPN) solutions. Candidates are required to implement SSL VPNs to grant secure remote access to internal resources and configure IPsec VPNs in either meshed or partially redundant topologies to ensure encrypted communication between distributed network locations.</li> </ul>
Topic 3	<ul style="list-style-type: none"> <li>• Content inspection: This section of the exam measures the skills of network security engineers and covers the setup and management of content inspection features on FortiGate. Candidates must demonstrate an understanding of encrypted traffic inspection using digital certificates, identify and apply FortiGate inspection modes, and configure web filtering policies. The ability to implement application control for monitoring and regulating network application usage, configure antivirus profiles to detect and block malware, and set up Intrusion Prevention Systems (IPS) to shield the network from threats and vulnerabilities is also assessed.</li> </ul>
Topic 4	<ul style="list-style-type: none"> <li>• Firewall policies and authentication: This section of the exam measures the skills of firewall administrators and covers the implementation and management of security policies. It involves configuring basic and advanced firewall rules, applying Source NAT (SNAT) and Destination NAT (DNAT) options, and enforcing various firewall authentication methods. The section also includes deploying and configuring Fortinet Single Sign-On (FSSO) to streamline user access across the network.</li> </ul>
Topic 5	<ul style="list-style-type: none"> <li>• Routing: This section of the exam measures the skills of firewall administrators and covers the configuration of routing features on FortiGate devices. It includes defining and applying static routes for directing traffic within and outside the network, as well as setting up Software-Defined WAN (SD-WAN) to distribute and balance traffic loads across multiple WAN connections efficiently.</li> </ul>

## Get 1 year Of Updated Fortinet FCP\_FGT\_AD-7.6 Exam Question Dumps

As you can find on the website, there are three versions of FCP\_FGT\_AD-7.6 study materials that are also very useful for reading: the PDF, Software and APP online. For example, you can use the APP version of FCP\_FGT\_AD-7.6 real exam in a web-free environment. Of course, the premise is that you have used it once before in a networked environment. This will save you a lot of traffic. This advantage of FCP\_FGT\_AD-7.6 Study Materials allows you to effectively use all your fragmentation time.

### Fortinet FCP - FortiGate 7.6 Administrator Sample Questions (Q19-Q24):

#### NEW QUESTION # 19

Refer to the exhibit. Based on the routing table shown in the exhibit, which two statements are true? (Choose two.)

Destination	Gateway IP	Interface	Status
0.0.0.0/0	100.65.0.254	port2	Enabled
10.10.10.0/24	100.66.0.254	port3	Enabled
10.0.13.0/24	10.0.13.125	port6	Enabled

- A. A packet with the source IP address 10.0.13.10 arriving on port2 is allowed if strict RPF is disabled.
- B. A packet with the source IP address 10.100.110.10 arriving on port2 is allowed if strict RPF is enabled.
- C. A packet with the source IP address 10.10.10.10 arriving on port2 is allowed if strict RPF is enabled.
- D. A packet with the source IP address 10.100.110.10 arriving on port3 is allowed if strict RPF is disabled.

**Answer: A,D**

Explanation:

With strict RPF disabled, asymmetric routing is allowed. So, a packet sourced from 10.100.110.10 (not present in the routing table) and arriving on port3 will be accepted as long as a return route exists (default route via port2).

With strict RPF disabled, a packet from 10.0.13.10 arriving on port2 is also allowed, even though the routing table expects it to come via port6, since the system does not enforce the interface check without strict RPF.

#### NEW QUESTION # 20

A network administrator wants to set up redundant IPsec VPN tunnels on FortiGate by using two IPsec VPN tunnels and static routes.

All traffic must be routed through the primary tunnel when both tunnels are up. The secondary tunnel must be used only if the primary tunnel goes down. In addition, FortiGate should be able to detect a dead tunnel to speed up tunnel failover.

Which two key configuration changes must the administrator make on FortiGate to meet the requirements? (Choose two.)

- A. Configure a lower distance on the static route for the primary tunnel, and a higher distance on the static route for the secondary tunnel.
- B. Enable Dead Peer Detection.
- C. In the phase1-interface, enable npu-offload to detect a dead tunnel.
- D. Use the VPN wizard to create an IPsec template for a redundant IPsec VPN tunnel.

**Answer: A,B**

Explanation:

Configure a lower distance on the static route for the primary tunnel, and a higher distance on the static route for the secondary tunnel → This ensures that the primary tunnel is always preferred, and the secondary is only used when the primary route is unavailable.

Enable Dead Peer Detection → DPD allows FortiGate to quickly detect when the primary tunnel is down, enabling faster failover to the backup tunnel.

#### NEW QUESTION # 21

Refer to the exhibit. A network administrator is troubleshooting an IPsec tunnel between two FortiGate devices. The administrator has determined that phase 1 status is up, but phase 2 fails to come up.

Phase 2 selectors

Name	Local Address	Remote Address	Comments
ToBR1	10.0.11.0/255.255.255.0	172.20.1.0/255.255.255.0	

Edit Phase 2 Selector

Name: ToBR1

Comments: 0/255

Encapsulation: Tunnel Mode (selected), Transport Mode

IP version: IPv4 (selected), IPv6

Named address:  Local address

Local address: IP Address Subnet Address IP Range  
10.0.11.0 255.255.255.0

Remote address: IP Address Subnet Address IP Range  
172.20.1.0 255.255.255.0

Advanced

Encryption - authentication: AES128 - SHA1

Replay detection:  Enable  Disable

Perfect forward secrecy (PFS):  Enable  Disable

Diffie-Hellman groups:  1  2  5  14  15  16  17  18  19  20  21  27  28  29  30  31  32

Local port:  All  Specify

Remote port:  All  Specify

Protocol:  All  Specify

Auto-negotiate:  Enable  Disable

Autokey keep alive:  Enable  Disable

Key lifetime: Seconds Kilobytes Both  
43200 second(s)

Phase 2 selectors

Name	Local Address	Remote Address	Comments
ToHQ	172.20.1.0/255.255.255.0	10.11.0.0/255.255.255.0	

Edit Phase 2 Selector

Name: ToHQ

Comments: 0/255

Encapsulation: Tunnel Mode (selected), Transport Mode

IP version: IPv4 (selected), IPv6

Named address:  Local address

Local address: IP Address Subnet Address IP Range  
172.20.1.0 255.255.255.0

Remote address: IP Address Subnet Address IP Range  
10.11.0.0 255.255.255.0

Advanced

Encryption - authentication: AES256 - SHA1

Replay detection:  Enable  Disable

Perfect forward secrecy (PFS):  Enable  Disable

Diffie-Hellman groups:  1  2  5  14  15  16  17  18  19  20  21  27  28  29  30  31  32

Local port:  All  Specify

Remote port:  All  Specify

Protocol:  All  Specify

Auto-negotiate:  Enable  Disable

Autokey keep alive:  Enable  Disable

Key lifetime: Seconds Kilobytes Both  
14400 second(s)

Based on the phase 2 configuration shown in the exhibit, which two configuration changes will bring phase 2 up? (Choose two.)

- A. On HQ-NGFW, set Encryption to AES256.
- B. On BR1-FGT, set Remote Address to 10.0.11.0/255.255.255.0.
- C. On HQ-NGFW, enable Diffie-Hellman Group 2.
- D. On BR1-FGT, set Seconds to 43200.

Answer: B,D

Explanation:

The key lifetime (Seconds) must match on both sides; BR1-FGT is set to 14400, so setting it to 43200 matches HQ-NGFW.

The remote address on BR1-FGT should match the HQ-NGFW's local subnet (10.0.11.0/24), but it is currently set incorrectly as 172.20.1.0/24. Changing it to 10.0.11.0/255.255.255.0 will align the Phase 2 selectors.

### NEW QUESTION # 22

A network administrator has configured an SSL/SSH inspection profile defined for full SSL inspection and set with a private CA certificate. The firewall policy that allows the traffic uses this profile for SSL inspection and performs web filtering. When visiting any HTTPS websites, the browser reports certificate warning errors.

What is the reason for the certificate warning errors?

- A. With full SSL inspection it is not possible to avoid certificate warning errors at the browser level.
- B. The certificate used by FortiGate for SSL inspection does not contain the required certificate extensions.
- **C. The browser does not recognize the certificate in use as signed by a trusted CA.**
- D. The SSL cipher compliance option is not enabled on the SSL inspection profile. This setting is required when the SSL inspection profile is defined with a private CA certificate.

**Answer: C**

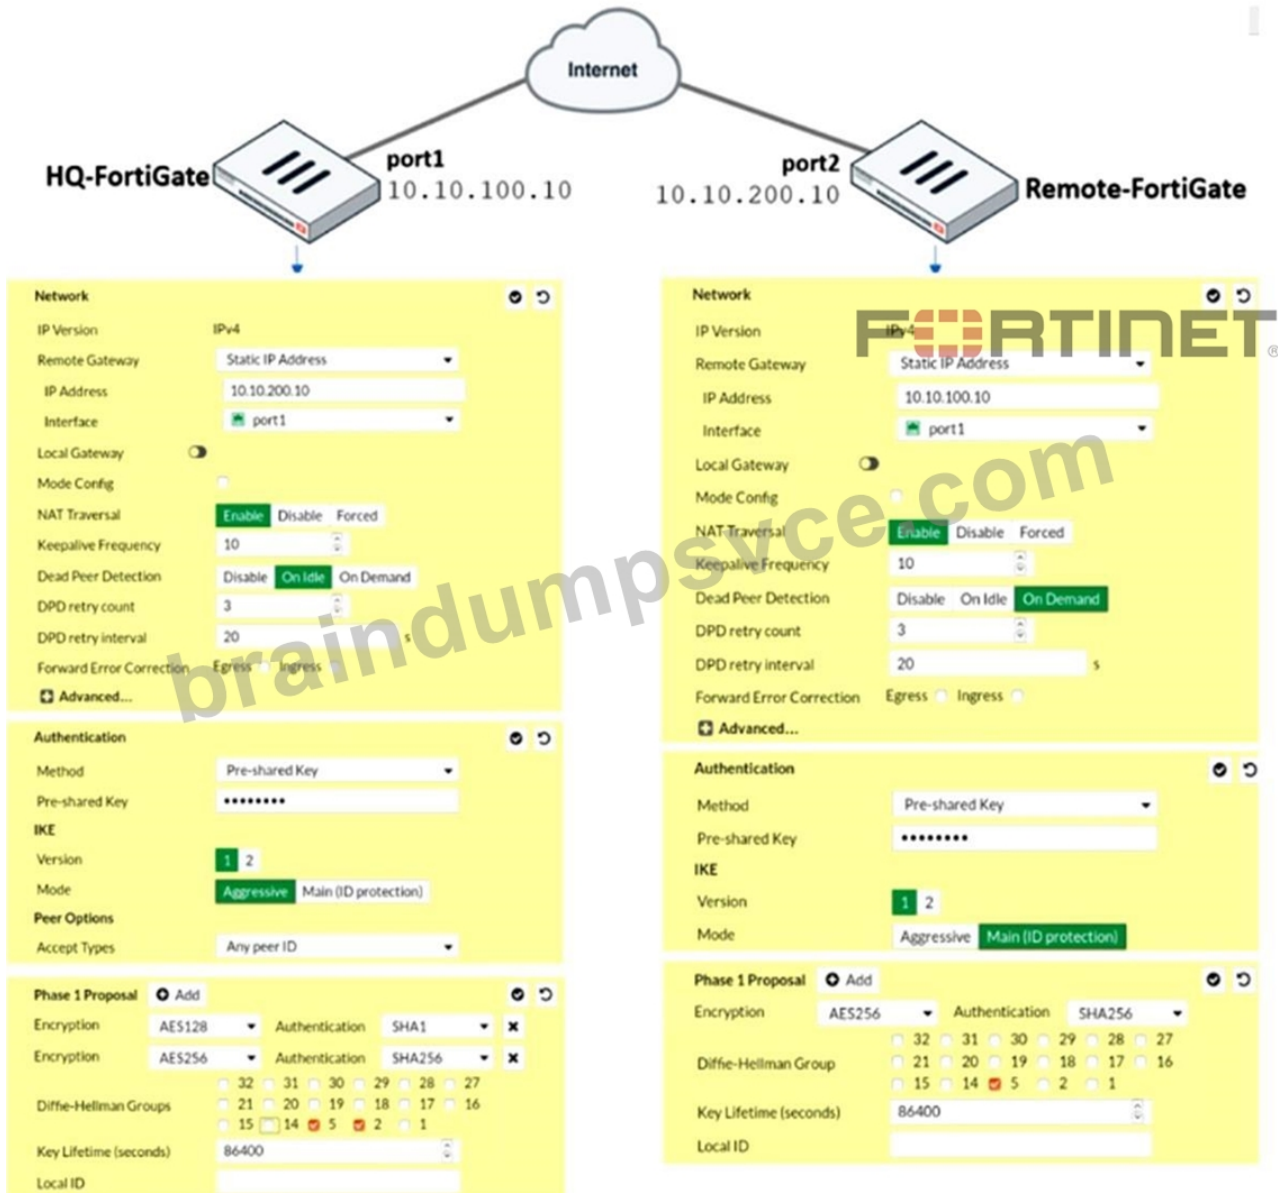

Explanation:

The certificate warning errors occur because the SSL inspection profile is configured to use a private CA certificate that is not recognized by the browser as being signed by a trusted CA. For the browser to trust the FortiGate's re-signed certificates, the CA certificate used by FortiGate for SSL inspection must be installed in the browser's trusted certificate store. Until the browser recognizes the certificate authority (CA) as trusted, it will continue to display warning errors when accessing HTTPS websites.

### NEW QUESTION # 23

Refer to the exhibit.

**IPsec tunnel configuration**

A network administrator is troubleshooting an IPsec tunnel between two FortiGate devices. The administrator has determined that phase 1 failed to come up. The administrator has also re- entered the pre-shared key on both FortiGate devices to make sure they match.

Based on the phase 1 configuration and the diagram shown in the exhibit, which two configuration changes can the administrator make to bring phase 1 up? (Choose two.)

- A. On HQ-FortiGate, disable Diffie-Helman group 2.
- B. On both FortiGate devices, set Dead Peer Detection to On Demand.
- C. On HQ-FortiGate, set IKE mode to Main (ID protection).
- D. On Remote-FortiGate, set port2 as Interface.

**Answer: C,D**

**Explanation:**

On the HQ-FortiGate the IKE phase 1 mode is set to Aggressive, while on the Remote-FortiGate it is set to Main (ID protection). Both sides must use the same IKE mode for phase 1 to come up, so changing HQ-FortiGate to Main mode resolves this mismatch. On the Remote-FortiGate, the phase 1 Interface is configured as port1, but according to the diagram the WAN-facing interface with IP 10.10.200.10 is port2. The local interface in the IPsec configuration must match the physical WAN interface, so changing it to port2 is required for the tunnel to establish.

**NEW QUESTION # 24**

.....

Exams like the Fortinet FCP\_FGT\_AD-7.6 exam provided by Fortinet are crucial for the advancement of your career. Candidates want to succeed on their FCP - FortiGate 7.6 Administrator exam. For candidates to study for and successfully pass their chosen certification exam the first time, BraindumpsVCE provides FCP - FortiGate 7.6 Administrator FCP\_FGT\_AD-7.6 Exam Questions. You may use the top FCP\_FGT\_AD-7.6 study resources from BraindumpsVCE to prepare for the FCP - FortiGate 7.6 Administrator exam. Fortinet FCP\_FGT\_AD-7.6 exam questions are a dependable and trustworthy source of training.
