

# Free PDF 2026 SAP C-S43-2601: SAP Certified Implementation Consultant - SAP S/4HANA Cloud Private Edition, Asset Management (C\_S43\_2601) Latest Valid Test Answers

For candidates who want to evaluate and enhance their SAP C-S43-2601 Test Preparation online, the web-based practice test is a perfect choice. You can attempt our 60 SAP web-based practice exam whenever it suits you because it is accessible from any location with an internet connection. This SAP Certified Implementation Consultant - SAP S/4HANA Cloud Private Edition, Asset Management (C\_S43\_2601) browser-based practice exam helps you overcome exam fear as it simulates the environment of the real test.

However, you should keep in mind to pass the SAP Certified Implementation Consultant - SAP S/4HANA Cloud Private Edition, Asset Management (C\_S43\_2601) (C-S43-2601) certification exam is not an easy task. It is a challenging job. If you want to pass the C-S43-2601 exam then you have to put in some extra effort, time, and investment then you will be confident to pass the SAP Certified Implementation Consultant - SAP S/4HANA Cloud Private Edition, Asset Management (C\_S43\_2601) (C-S43-2601) exam. With the complete and comprehensive SAP Certified Implementation Consultant - SAP S/4HANA Cloud Private Edition, Asset Management (C\_S43\_2601) (C-S43-2601) exam dumps preparation you can pass the SAP Certified Implementation Consultant - SAP S/4HANA Cloud Private Edition, Asset Management (C\_S43\_2601) (C-S43-2601) exam with good scores. The ValidBraindumps C-S43-2601 Questions can be helpful in this regard. You must try this.

## Free PDF Quiz Perfect SAP - C-S43-2601 - SAP Certified Implementation Consultant - SAP S/4HANA Cloud Private Edition, Asset Management (C\_S43\_2601) Valid Test Answers

C-S43-2601 materials trends are not always easy to forecast, but they have predictable pattern for them by ten-year experience who often accurately predict points of knowledge occurring in next C-S43-2601 preparation materials. Our professional experts can give you the latest and the most accurate C-S43-2601 Training Material for that they have been in this field for so many years and know every aspect of the change of C-S43-2601 practice questions. You can trust in our C-S43-2601 learning braindump for sure.

## SAP Certified Implementation Consultant - SAP S/4HANA Cloud Private Edition, Asset Management (C\_S43\_2601) Sample Questions (Q10-Q15):

### NEW QUESTION # 10

Create a Maintenance Plan

The project team evaluates during the implementation project Maintenance Plans in SAP S/4HANA Asset Management. The following features need to be checked:

Create a Maintenance Plan

Create a Maintenance Plan and save it. Use the following information:

□

**Answer:**

Explanation:

See the Explanation for complete Solution of this Task.

Explanation:

Task 8: Create a Maintenance Plan

The objective of this task is to create a strategy-based maintenance plan that will automatically generate work orders for your pump based on the frequencies defined in your task list.

Step 1: Access the Transaction

\* Transaction Code : Enter IP42 in the command field and press Enter .

\* Initial Screen :

\* Maintenance Plan Category : Select Maintenance Order (or "Maintenance plan for Maintenance Order" if using the Fiori Launchpad).

\* Maintenance Strategy : Enter Z48 .

\* Press Enter .

Step 2: Enter Header and Maintenance Item Data

Once you are on the main creation screen, fill in the "Maintenance Item" section to define what is being maintained and how the orders should look:

\* Description : Enter Regular pump maintenance Z48 .

\* Equipment : Enter T-PA48 .

\* Planning Plant : This should default to 1010 based on the equipment, but ensure it is correct.

\* Order Type : Enter PM02 .

Explanation : By assigning Equipment T-PA48 and Order Type PM02 , you are telling SAP to generate a specific "Planned" maintenance order every time this schedule is triggered.

Step 3: Link the Task List

This step connects the plan to the specific maintenance steps (operations) you created in Task 7.

\* Look for the Task List section at the bottom of the screen.

\* Task List Type : Enter A (General Task List).

\* Group : Enter TL-48 .

\* Counter : Enter 1 .

\* Press Enter to validate the connection. You should see the description "Regular Maintenance GR48" appear.

Explanation : Linking the Task List ensures that when the maintenance plan generates an order, it automatically copies the 30-minute operations you defined earlier into that order.

Step 4: Set Scheduling Parameters (Optional but Recommended)

While the table in your document focuses on the data above, typically you would click the Maintenance Plan Scheduling Parameters tab to ensure the "Scheduling Period" and "Start Date" are set. However, for the assessment, the mandatory data is what we entered in Steps 1-3.

Step 5: Save

\* Click the Save (floppy disk) icon.

\* Note your Maintenance Plan Number : The system will display a message at the bottom, such as

"Maintenance plan 123 saved." Write this number down , as you will need it for Task 9: Schedule a Maintenance Plan .

Task 8 is now complete! You have built the automated "brain" that will handle the recurring maintenance for your pump.

**NEW QUESTION # 11**

Task 6: Configure Maintenance Order Types and work with Maintenance Orders The project team evaluates during the implementation project Maintenance Orders in SAP S/4HANA Asset Management. The following features need to be checked:

\* Configure a Maintenance Order Type and create a Maintenance Order

\* Create a Time Confirmation a Maintenance Order

\* Prepare a Maintenance Order for Completion

\* Create a Maintenance Order and save it.

Note:

Make sure that you have maintained all required customizing settings for the Maintenance Order Type.

Use the following information at header level:

□ Plan a Maintenance Order Operation and use the following information:

□

\* Create a Time Confirmation for the just created Maintenance Order. Use the following information:

□

\* Display the Actual Costs assigned to the just created Maintenance Order and set it to Technically Completed. Display the Settlement Rule.

□

**Answer:**

Explanation:

See the Explanation for complete Solution of this Task.

Explanation:

Task 6 Overview

The goal of this task is to process a repair from start to finish. You will convert the "leaking pump" notification into a work order, plan the labor, record the work performed, and technically close the file.

Step 1: Create the Maintenance Order from Notification

Instead of starting from scratch, we link the order to the notification you created in Task 5.

\* Access the Transaction : Use transaction code IW31 .

\* Initial Screen :

\* Order Type : PM01.

\* Notification : Enter your notification number (e.g., 10000147).

\* Press Enter .

\* Header Data :

\* The description "Pump is leaking" should pull in automatically.

\* Main Work Center : Ensure it is T-ME48.

Explanation : By entering the notification number, SAP automatically pulls in the equipment, functional location, and problem description, ensuring "data integrity" across the maintenance process.

Step 2: Plan the Operations (Labor)

You must tell the system how much effort the repair requires.

\* Go to the Operations Tab .

\* Enter Planning Data :

\* Work : 2.

\* Unit (Un) : H (Hours).

\* Number : 1 (One person).

\* Duration (Dur.) : 2 / Unit : H.

\* Add Enhancement Data :

\* Click the Additional Data tab - > Enhancement sub-tab.

\* In the Field Key box, use the search (F4) to select 0000001 (User-defined fields).

\* In the first text box ( Text 1 ), type: Industrial Z48.

Explanation : Planning the work allows the system to calculate the estimated cost of the repair. The "Enhancement" data is used to store specific technical details (like the motor type) that aren't in the standard SAP fields.

Step 3: Release the Order

An order in "Created" (CRTD) status is just a plan. To start work, it must be "Released" (REL).

\* Release : Look at the top toolbar and click the Green Flag icon .

\* Verify Status : The "Sys.Status" field should now include REL.

\* Save : Click the Save (floppy disk) icon.

Explanation : Releasing the order is the "Green Light" for the shop floor. It allows technicians to charge time to the job and warehouse staff to issue parts.

Step 4: Time Confirmation (Recording the Work)

Now we record that the repair is physically finished.

\* Access the Transaction : Use transaction code IW41 .

\* Enter Data :

\* Order : Enter your order number (e.g., 4000395).

\* Actual Work : 2 H.

\* Check the boxes for Final Confirmation and No Remaining Work .

\* Confirmation Text : Pump repaired and tested.

\* Save : Click the Save icon.

Explanation : This step captures the "Actual Cost." SAP multiplies the 2 hours of labor by the hourly rate of work center T-ME48 to calculate exactly how much this repair cost the company.

Step 5: Technical Completion (TECO)

The final administrative step to close the repair file.

\* Access the Transaction : Use transaction code IW32 .

\* Complete Technically :

\* Go to menu: Order > Functions > Complete > Complete (technically) .

\* Click the Green Checkmark on the popup window.

\* Save : Click the Save icon.

Explanation : TECO (Technical Completion) locks the order. It tells the system the asset is back in service and prevents any further labor or parts from being charged to this specific job.

## NEW QUESTION # 12

Check Inspection Lot and record Inspection Results

The project team evaluates during the implementation project the checking of Inspection Lots Checklist processing including result recording. The following features need to be checked:

- \* Display the automatically created Inspection Lot
- \* Record Inspection Results
- \* Display the automatically created Inspection Lot for the previously created Maintenance Order including Checklist. The Inspection Lot comprises the following data:
  - Record Inspection Results for the previously created Inspection Lot so that the Usage Decision is automatically set to Can be used

### Answer:

Explanation:

See the Explanation for complete Solution of this Task.

Explanation:

Task 13 Overview

This task focuses on the quality management (QM) integration with maintenance. You will verify the inspection lot that was automatically triggered by your maintenance order and then record the results to confirm the technical object is fit for use.

Step 1: Display the Automatically Created Inspection Lot

Before recording results, you must verify that the system generated the correct inspection lot for your maintenance order.

- \* Access the Transaction : Enter QA03 (Display Inspection Lot) in the command field and press Enter .
- \* Locate the Lot : Search for the inspection lot associated with the maintenance order you created in Task 12.
- \* Verify the Following Data :
- \* Material : T-PM1100
- \* Plant : 1010
- \* Inspection Lot Origin : 89 (Miscellaneous)
- \* Group : CL-DE-00
- \* Group Counter : 1

Explanation : The inspection lot is the central record for quality testing. Seeing these specific values (Group CL-DE-00) confirms that the classification you set up in Task 11 correctly triggered the intended inspection plan.

Step 2: Record Inspection Results

This is the process of entering the actual findings from the checklist inspection.

- \* Access the Transaction : You can navigate directly from the Inspection Lot in QA03 or use transaction QE51N (Results Recording Selection).
- \* Select the Lot : Enter your inspection lot number and click Execute .
- \* Record Results :
- \* Enter the inspection values for each characteristic listed in the checklist.
- \* Ensure the values you enter are within the "Acceptable" range or marked as "Pass".
- \* Automatic Usage Decision : Record the results such that the Usage Decision (UD) is automatically set to "Can be used" .
- \* Save : Click the Save (floppy disk) icon.

Explanation : By recording positive results, you satisfy the quality requirements for the maintenance task.

The automatic transition to "Can be used" status tells the system the pump has passed inspection and the maintenance order can proceed toward completion.

## NEW QUESTION # 13

Task 11: Classify a piece of Equipment

The project team evaluates during the implementation project the classification of Technical Objects in order to use Checklists in SAP S/4HANA Asset Management. The following features need to be checked:

- \* Assign a class to a Technical Object
- \* Assign characteristic values to a class
- \* Assign class EQ11 value to Technical Object T-PA## .
- \* Assign a characteristic value, so that Inspection Plan Q / CL-DE-00 / 1 is automatically found during the checklist process

### Answer:

Explanation:

See the Explanation for complete Solution of this Task.

Explanation:

Task 11 Overview

This task involves classifying a piece of equipment so it can be used in the Checklist process . By assigning a specific class and characteristic values, you enable the system to automatically find the correct inspection plan when a maintenance order is created.

Step 1: Access the Equipment Master Record

To classify the equipment, you must first open its master record in "Change" mode.

\* Transaction Code : Enter IE02 (Change Equipment) in the command field and press Enter .

\* Equipment : Enter T-PA48 .

\* Action : Press Enter to open the record.

Step 2: Assign the Class to the Equipment

Now you will link the equipment to a class that contains the required technical characteristics.

\* Navigate : Click the Classification button in the top toolbar (or go to the Classes tab if available).

\* Class Assignment :

\* Class Type : Ensure this is set to 002 (Equipment Class).

\* Class : Enter EQ11 .

\* Action : Press Enter . The system will now display the characteristics associated with class EQ11 in the bottom half of the screen.

Explanation : Assigning a class is like giving the equipment a "category". Class EQ11 is specifically configured in this system to hold the data needed for checklist processing.

Step 3: Assign Characteristic Values

This is the critical step that tells the system exactly which inspection plan to use for this specific pump.

\* Locate the Characteristic : In the values table, look for a characteristic related to "Inspection Plan" or "Checklist Group."

\* Enter the Value : Assign the value so that Inspection Plan CL-DE-00 / 1 is automatically found.

\* Note: Typically, you will enter CL-DE-00 in the "Inspection Plan Group" field and 1 in the "Group Counter" field.

\* Action : Press Enter to validate the values.

Explanation : Characteristic values are the specific details for this asset. By entering these values, you "tag" the equipment so that whenever it is added to a maintenance order, the system knows to look for the CL-DE-00 checklist automatically.

Step 4: Save

\* Action : Click the Save (floppy disk) icon.

\* Confirmation : The system should display a message at the bottom saying: "Equipment T-PA48 changed."

## NEW QUESTION # 14

Create and use a Maintenance Work Center

The project team evaluates during the implementation project the organizational elements in SAP S/4HANA Asset Management.

The following features need to be checked:

\* Create a Maintenance Work Center

\* Create a capacity demand for a Maintenance Work Center

\* Create a new Maintenance Work Center master record ZZ-ME## for maintenance plant 1010 similar to maintenance work center T-ME00 and save it. Use the following information:

\* Create a capacity demand of 1 hour for the just created Maintenance Work Center ZZ-ME## by creating a new maintenance order of order type PM01 .

### Answer:

Explanation:

See the Explanation for complete Solution of this Task.

Explanation:

Task 3: Create and Use a Maintenance Work Center

Objective

In Task 3, the requirement was to:

\* create a new maintenance work center ZZ-ME42 for plant 1010 similar to T-ME00

\* maintain the required capacity values

\* create a 1-hour capacity demand for that work center by creating a maintenance order of type PM01

Part 1: Create the Maintenance Work Center

Requirement from task file

The task required the following values for the work center:

\* Plant = 1010

- \* Work Center = ZZ-ME42
- \* Description = Mechanical Maintenance 42
- \* No. Ind. Capacities = 5
- \* Capacity = 24.00 H

The task also stated that the work center must be created similar to maintenance work center T-ME00 .

□ Step-by-step procedure

Step 1: Open work center creation

- \* Go to SAP GUI command field
- \* Enter transaction IR01
- \* Press Enter

Transaction IR01 is used to create a new work center. This is the correct starting point for creating the maintenance work center required in Task 3.

Step 2: Enter initial work center data

On the Create Work Center: Initial Screen , enter:

- \* Plant = 1010
- \* Work Center = ZZ-ME42
- \* Work Center Category = 0005
- \* In Copy from :
- \* Plant = 1010
- \* Work Center = T-ME00

Then press Enter .

The task explicitly required the work center to be created for plant 1010 and to be created similar to T-ME00.

Work center category 0005 is the maintenance work center category, so this was the correct category to use for a maintenance work center.

Step 3: Include capacity data during copy

When the Copy from popup appeared:

- \* select Capacities
- \* continue with the green check

This was important because the task required changing capacity-related data:

- \* No. Ind. Capacities = 5
- \* Capacity = 24.00 H Copying the capacity data ensured the new work center inherited the capacity structure from T-ME00 and could then be adjusted correctly.

□ Step 4: Maintain basic data

On the work center master screen:

- \* change the description to Mechanical Maintenance 42

This matches the exact description required by the task.

Step 5: Maintain capacity values

Go to the Capacities tab, then open the capacity detail screen.

Maintain or verify:

- \* No. Ind. Capacities = 5
- \* Capacity Base Unit = H
- \* Capacity recalculated to 24.00 H

In our system, the Capacity field was system-calculated and not directly editable.

The final valid values were achieved with:

- \* Start Time = 08:00:00
- \* End Time = 17:00:00
- \* Length of breaks = 01:00:00
- \* Capacity Utilization = 60
- \* No. Ind. Capacities = 5

This produced:

- \* Capacity = 24.00 H

The task required 24.00 H capacity, but SAP calculated it automatically based on operating time, utilization, and number of individual capacities.

The resulting calculation was correct and matched the task requirement exactly.

Step 6: Save the work center

- \* Click Save

Later, when trying to create the same work center again, SAP displayed the system message:

- \* "Work center ZZ-ME42 in plant 1010 already exists"

Explanation / Verification:

This system message confirmed that the work center had already been created successfully.

Therefore, the creation of ZZ-ME42 was verified as complete.

Part 2: Create a 1-Hour Capacity Demand

Requirement from task file

The task required:

- \* create a capacity demand of 1 hour
- \* for the newly created maintenance work center ZZ-ME42
- \* by creating a maintenance order of type PM01

Step-by-step procedure

Step 7: Open maintenance order creation

- \* In the command field, enter /nIW31
- \* Press Enter

Transaction IW31 is used to create a maintenance order.

The /n ensured SAP exited the previous transaction and opened the new one directly.

Step 8: Enter order header data

On the Create Maintenance Order: Initial Screen, enter:

- \* Order Type = PM01
- \* Planning Plant = 1010

Then press Enter.

The task explicitly required the capacity demand to be created by means of a maintenance order of type PM01.

Step 9: Enter order description

On the order header screen, enter a short text such as:

- \* Capacity demand ZZ-ME42

The task did not prescribe a specific short text, so a meaningful description was used for traceability.

Step 10: Create the first operation

In the first operation area / operations overview, maintain:

- \* Operation = 0010
- \* Work Center = ZZ-ME42
- \* Plant = 1010
- \* Control Key = PM01
- \* Work Duration / Work = 1
- \* Unit = H

Then press Enter.

This operation is the actual source of the capacity demand.

The capacity demand is not created merely by the order header; it is created by assigning the operation to the work center with a planned work value of 1 hour.

Therefore, these operation entries were the critical part of fulfilling Task 3.

Step 11: Save the maintenance order

- \* Click Save

SAP displayed the confirmation message:

- \* "Order saved with number 4000314"

Explanation / Verification:

This was the final confirmation that the maintenance order had been created successfully.

Because the operation was assigned to ZZ-ME42 with 1 H planned work, this verified that the required 1-hour capacity demand had been created for the work center.

Verified completed objects

The following results were verified during execution:

- \* Maintenance Work Center created
- \* Work Center = ZZ-ME42
- \* Plant = 1010
- \* confirmed by SAP message that the work center already existed when rechecked
- \* Capacity maintained correctly
- \* No. Ind. Capacities = 5
- \* Capacity = 24.00 H
- \* Capacity demand created
- \* maintenance order type PM01
- \* operation assigned to ZZ-ME42
- \* planned work = 1 H
- \* Order successfully saved
- \* SAP confirmation: Order saved with number 4000314

## NEW QUESTION # 15

.....

Are you preparing for taking the SAP Certified Implementation Consultant - SAP S/4HANA Cloud Private Edition, Asset Management (C\_S43\_2601) (C-S43-2601) certification exam? We understand that passing the C-S43-2601 exam with ease is your goal. However, many people struggle because they rely on the wrong study materials. That's why it's crucial to prepare for the C-S43-2601 Exam using the right C-S43-2601 Exam Questions learning material. Look no further than ValidBraindumps, where we take responsibility for providing accurate and reliable SAP C-S43-2601 questions prepared by our team of experts.

**New C-S43-2601 Test Dumps:** <https://www.validbraindumps.com/C-S43-2601-exam-prep.html>

You can print the PDF for SAP Certified Application Associate C-S43-2601 exam dumps after downloading from ValidBraindumps to prepare the exam anytime, anywhere, Are you aiming to ace the SAP C-S43-2601 exam on your first attempt, SAP C-S43-2601 Valid Test Answers We keep our website protected with enhanced security protocols, , What's more, it is the best recognition for us that you obtain the C-S43-2601 exam certification.

What you must know to protect yourself today, C-S43-2601 An Interview with Rose Gonnella and Max Friedman on Design Fundamentals: Notes on Color Theory, You can print the PDF for SAP Certified Application Associate C-S43-2601 Exam Dumps after downloading from ValidBraindumps to prepare the exam anytime, anywhere.

## Buy SAP C-S43-2601 Latest Dumps Today and Save Money with Free Updates

Are you aiming to ace the SAP C-S43-2601 exam on your first attempt, We keep our website protected with enhanced security protocols, , What's more, it is the best recognition for us that you obtain the C-S43-2601 exam certification.

We have a dedicated all-day online service to help you solve problems.
