CheckPoint Check Point Certified Security Expert R81 Sample Questions (Q247-Q252):

NEW QUESTION # 247

Full synchronization between cluster members is handled by Firewall Kernel. Which port is used for this?

- A. TCP port 265
- B. UDP port 256
- C. TCP port 256
- D. UDP port 265

Answer: C

Explanation:

Explanation

Synchronization works in two modes:

Full Sync transfers all Security Gateway kernel table information from one cluster member to another. It is handled by the fwd daemon using an encrypted TCP connection on port 256.

Delta Sync transfers changes in the kernel tables between cluster members. Delta sync is handled by the Security Gateway kernel using UDP connections on port 8116.

NEW QUESTION # 248

Due to high CPU workload on the Security Gateway, the security administrator decided to purchase a new multicore CPU to replace the existing single core CPU. After installation, is the administrator required to perform any additional tasks?

- A. Hyperthreading must be enabled in the bios to use CoreXL
- B. After upgrading the hardware, increase the number of kernel instances using cpconfig
- C. Administrator does not need to perform any task. Check Point will make use of the newly installed CPU and Cores
- D. Run cprestart from clish

Answer: B

Explanation:

After installing a new multicore CPU to replace the existing single core CPU, the administrator is required to perform one additional task, which is to increase the number of kernel instances using cpconfig. This is because by default, only one kernel instance is enabled on a Security Gateway. To take advantage of multiple cores, the administrator needs to configure more kernel instances according to the number of cores available on the CPU. References: Configuring CoreXL

NEW QUESTION # 249

Which is NOT a SmartEvent component?

- A. Correlation Unit
- B. Log Server
- C. SmartEvent Server
- D. Log Consolidator

Answer: D

Explanation:

Log Consolidator is NOT a SmartEvent component. SmartEvent is a unified security event management solution that provides visibility, analysis, and reporting of security events across multiple Check Point products. SmartEvent consists of three main components: SmartEvent Server, Correlation Unit, and Log Server. SmartEvent Server is responsible for storing and displaying

security events in SmartConsole and SmartEventWeb. Correlation Unit is responsible for collecting and correlating logs from various sources and generating security events based on predefined or custom scenarios. Log Server is responsible for receiving and indexing logs from Security Gateways and other Check Point modules. Log Consolidator is not a valid component or blade of SmartEvent.

NEW QUESTION # 250

Which statement is false in respect of the SmartConsole after upgrading the management server to R81.20?

- A. Yes, using CPUSE you can make the installer available in the Web Portal of the Management Server
- B. Yes, the SmartConsole Upgrade package can be installed using CPUSE
- C. Yes. You can download the SmartConsole directly from the Download Center
- D. As far as you use version R80.40, no upgrade is needed due to compatibility mode

Answer: D

Explanation:

The statement that is false in respect of the SmartConsole after upgrading the management server to R81.20 is that as far as you use version R80.40, no upgrade is needed due to compatibility mode. This is false because SmartConsole R80.40 is not compatible with R81.20 management server and you need to upgrade your SmartConsole to R81.20 as well. The other statements are true and valid ways to obtain the SmartConsole upgrade package. References: [Check Point Security Expert R81 Installation and Upgrade Guide], page 18.

NEW QUESTION # 251

What are the Threat Prevention software components available on the Check Point Security Gateway?

- A. IPS, Threat Emulation and Threat Extraction
- B. IPS, Anti-Bot, Anti-Virus, Threat Emulation and Threat Extraction
- C. IDS, Forensics, Anti-Virus, Sandboxing
- D. IPS, Anti-Bot, Anti-Virus, SandBlast and Macro Extraction

Answer: B

Explanation:

The Threat Prevention software components available on the Check Point Security Gateway are IPS, Anti- Bot, Anti-Virus, Threat Emulation and Threat Extraction. These components provide comprehensive protection against various types of cyber threats, such as network attacks, malware, ransomware, phishing, zero-day exploits, data leakage, and more. IPS is a network security component that detects and prevents malicious traffic based on signatures, behavioral patterns, and anomaly detection. Anti-Bot is a network security component that detects and blocks botnet communications and command-and-control servers. Anti- Virus is a network security component that scans files for known viruses, worms, and trojans. Threat Emulation is a network security component that emulates files in a sandbox environment to detect unknown malware and prevent zero-day attacks. Threat Extraction is a network security component that removes malicious content from files and delivers clean files to users.
