## CTFL-AcT Relevant Answers, CTFL-AcT Valid Exam Cram

With our customer-oriented CTFL-AcT actual question, you can be one of the former exam candidates with passing rate up to 98 to 100 percent. You will pay just a small amount of money on our CTFL-AcT exam guide but harvest colossal success with potential bright future. And we have confidence that your future aims will come along with this successful exam as the beginning. So choosing CTFL-AcT actual question is choosing success.

## ISQI ISTQB Foundation Level - Acceptance Testing Sample Questions (Q12-Q17):

### NEW QUESTION # 12

You are leading a brand new project team whose members are coming from all over the organization and have no former experience in working together. You need to build a common vision and team spirit. What workshop would fit BEST:

- A. You draw a staircase with 11 steps, each of them representing a major milestone of the project. The bottom of the stairs corresponds to the first day of the project and the upper step means that the project is released. You locate the present situation in the top of the stairs. The team is asked to identify and discuss the major steps downwards.
- B. You ask every member in turn to write down three things he/she likes and dislikes in the organization and to post them on a

wall. A volunteer is then chosen to read randomly some posts that are then discussed with the group.

- C. You invite every member in turn to describe his/her past experience and his/her major achievements in the organization or in their former job.
- D. You invite the team members and ask them to design their own (team-wise) emblem representing their values, beliefs, goals, tasks together than a common motto.

**Answer: D**

### NEW QUESTION # 13

Which one of the following statements regarding performance testing is MOST correct?

- A. Depending on the model used to simulate the workload, performance tests are called load, stress or endurance / stability tests.
- B. Performance testing aims to determine a system's robustness against malicious attacks.
- C. The performance test results serve to determine hardware and software performance requirements.
- D. The performance of the system is measured in a context that reflects, as far as possible, representative operating conditions.

**Answer: A**

Explanation:

Performance testing assesses how a system behaves under specific conditions, typically focusing on responsiveness, stability, and resource usage. The type of performance test depends on the workload model:

Load testing evaluates performance under expected peak usage.

Stress testing pushes the system beyond its capacity to assess limits.

Endurance/stability testing checks for performance degradation over extended periods.

Option A correctly describes that performance test types are determined by the workload simulation strategy.

Other options:

B confuses performance with security testing - malicious attack robustness is a security focus, not performance.

C is partly correct but less comprehensive than A. While testing should simulate realistic conditions, categorization into stress/load/endurance is better aligned with workload modeling.

D is misleading - performance tests validate systems against performance requirements; they are not primarily used to define them.

A). Depending on the model used to simulate the workload, performance tests are called load, stress or endurance / stability tests.

### NEW QUESTION # 14

Which one of the following statements describes the collaboration between business analysts and testers BEST?

- A. Once the requirements and acceptance criteria have been defined, business analysts are no longer involved in testing activities.
- B. Business analysts usually cannot review acceptance tests, because they do not understand the technical details.
- C. Business analysts collaborate on test planning and risk analysis to ensure that further on, appropriate test cases are developed and prioritized.
- D. Testers participate in identifying business needs of stakeholders to better understand the business needs and related requirements.

**Answer: C**

Explanation:

The ISTQB CTFL Acceptance Testing Syllabus emphasizes the importance of collaboration between business analysts and testers throughout the testing lifecycle, especially during test planning and risk identification.

Business analysts contribute domain knowledge and business context, which is crucial in identifying business- critical areas, defining priorities, and ensuring that acceptance tests align with business goals.

Option A correctly identifies this collaboration. During test planning, business analysts help define acceptance criteria, identify risks from a business perspective, and support test prioritization to focus on high-value features. Their early involvement ensures that acceptance tests are meaningful and support stakeholder expectations.

Option B is incorrect as business analysts actively review acceptance tests to confirm alignment with business rules, regardless of technical complexity.

Option C is inaccurate because although testers seek to understand business needs, the responsibility for identifying those needs lies with business analysts.

Option D is incorrect; business analysts remain engaged throughout the project lifecycle, including test support and defect triage.

Exact Reference - ISTQB CTFL Acceptance Testing Syllabus (Section 1.4):

"Testers and business analysts collaborate during test planning and analysis activities to ensure the tests meet business needs and risk areas are adequately covered." Therefore, A provides the most accurate and comprehensive description.

### NEW QUESTION # 15

Which of the following sentences explains BEST how acceptance test cases can be derived from the acceptance criteria

- A. Test techniques such as business process-based testing or use case testing can be used to create acceptance tests from the acceptance criteria
- B. Risk-based testing is not a good practice for designing and prioritizing tests because the objective is to cover only the acceptance criteria
- C. Test design should start with non-functional acceptance criteria and only then with functional aspects
- D. Acceptance criteria are not useful for creating acceptance test cases because experience-based techniques should be preferred

**Answer: A**

Explanation:

Acceptance criteria describe the conditions under which a requirement or user story is considered fulfilled.

These criteria serve as the basis for deriving acceptance test cases. To transform them into concrete tests, testers apply test design techniques such as:

Business process-based testing (deriving tests from modeled workflows)

Use case testing (based on user interactions with the system)

Option B is incorrect because it clearly describes how structured techniques are applied to translate acceptance criteria into actionable test cases, ensuring traceability and relevance.

Other options:

A is incorrect - experience-based techniques may supplement, but structured methods are foundational in deriving test cases from defined criteria.

C is misleading - risk-based testing is a well-established and effective practice for prioritizing test efforts, including acceptance testing.

D is incorrect - both functional and non-functional criteria are important; there's no fixed rule to prioritize one over the other.

B). Test techniques such as business process-based testing or use case testing can be used to create acceptance tests from the acceptance criteria

### NEW QUESTION # 16

Which one of the following statements describes correctly how acceptance testing may be augmented with other test techniques or approaches?

- A. In a black-box testing approach, acceptance test scenarios follow the implemented sequence of function calls in the code.
- B. In a priority-based testing approach, prioritization of acceptance tests depends on identified product risks.
- C. In a risk-based testing approach, acceptance criteria are derived from the tester's experience and intuition.
- D. In a model-based testing approach, acceptance tests are generated from graphical or textual models.

**Answer: D**

### NEW QUESTION # 17

.....

It can be difficult to prepare for the ISTQB Foundation Level - Acceptance Testing (CTFL-AcT) certification test when you're already busy with daily tasks. But, you can successfully prepare for the examination despite your busy schedule if you choose updated and real ISQI CTFL-AcT exam questions. We believe that success in the test depends on studying with ISTQB Foundation Level - Acceptance Testing (CTFL-AcT) Dumps questions. We have hired a team of professionals who has years of experience in helping test applicants acquire essential knowledge by providing them with ISQI CTFL-AcT actual exam questions.
