## Huawei HCIP-AI-EI Developer V2.5 Sample Questions (Q43-Q48):

### NEW QUESTION # 43

The mAP evaluation metric in object detection combines accuracy and recall.

- A. TRUE
- B. FALSE

**Answer: B**

Explanation:

The mAP (mean Average Precision) metric in object detection combines precision and recall, not accuracy and recall. mAP is calculated by averaging the Average Precision (AP) across all classes in a dataset. Precision measures how many predicted positives are correct, while recall measures how many actual positives are identified. Accuracy, on the other hand, is a general metric for classification tasks and is less suitable for object detection where class imbalance and localization are important.

Exact Extract from HCIP-AI EI Developer V2.5:

"mAP evaluates object detection performance by considering both precision and recall across all classes, providing a balanced measure of detection accuracy and completeness." Reference: HCIP-AI EI Developer V2.5 Official Study Guide - Chapter: Object Detection Metrics

### NEW QUESTION # 44

----- is a text representation method based on the bag of words (BoW) model. It decomposes words into subwords and then adds the vector representations of the subwords to obtain word vectors, fully utilizing character N-gram information. (Fill in the blank.)

**Answer:**

Explanation:

FastText

Explanation:

FastText is an extension of Word2Vec developed by Facebook AI Research. Unlike Word2Vec, which learns embeddings for whole words, FastText represents each word as a sum of its character n-gram embeddings.

This helps in handling rare words and morphologically rich languages by generating embeddings for unseen words from their subword components.

Exact Extract from HCIP-AI EI Developer V2.5:

"FastText decomposes words into character n-grams and represents words as the sum of their n-gram vectors, improving representation for rare and out-of-vocabulary words." Reference: HCIP-AI EI Developer V2.5 Official Study Guide - Chapter: Subword Embedding Models

### NEW QUESTION # 45

Which of the following applications are supported by ModelArts ExeML?

- A. Dress code conformance monitoring in campuses
- B. Automatic offering classification
- C. Predictive maintenance of manufacturing equipment
- D. Anomalous sound detection in production or security scenarios

**Answer: A,B,C,D**

Explanation:

ModelArts ExeML (Expert Experience Machine Learning) enables users without programming expertise to build AI models through a visual interface. It supports multiple application scenarios, including:

- \* Predictive maintenance in manufacturing to detect potential equipment failures.
- \* Monitoring compliance with dress codes in school or workplace settings.
- \* Detecting unusual sounds in manufacturing or security contexts.
- \* Classifying offerings automatically in e-commerce or retail systems.

Exact Extract from HCIP-AI EI Developer V2.5:

"ModelArts ExeML supports intelligent applications in industrial maintenance, campus security, sound anomaly detection, and automated product classification." Reference: HCIP-AI EI Developer V2.5 Official Study Guide - Chapter: ModelArts ExeML

#### NEW QUESTION # 46

The development of large models should comply with ethical principles to ensure the legal, fair, and transparent use of data.

- A. TRUE
- B. FALSE

**Answer: A**

Explanation:

Ethical AI development requires ensuring that large models are trained and deployed in a way that respects laws, fairness, and transparency. This includes preventing bias, ensuring user privacy, protecting intellectual property, and being transparent about data usage and decision-making processes.

Exact Extract from HCIP-AI EI Developer V2.5:

"The development and deployment of large models must follow ethical principles to ensure legal, fair, and transparent use of data, avoiding bias and misuse." Reference:HCIP-AI EI Developer V2.5 Official Study Guide - Chapter: Ethical AI Practices

#### NEW QUESTION # 47

In an HSV color space, H is for hue, S is for saturation, and V is for value. Which of the following statements about the HSV color space are true?

- A. Value is a measure of brightness. The image brightness can be enhanced by processing the V component of the HSV color space.
- B. Hue indicates the basic color attributes, such as red, green, and blue.
- C. The HSV color space perceives colors differently from human eyes, so it is not suitable for image segmentation or color analysis.
- D. Saturation describes how vivid the color is. The lower the saturation, the closer the color is to gray. The higher the saturation, the more vivid the color.

**Answer: A,B,D**

Explanation:

The HSV model separates chromatic content (Hue, Saturation) from brightness (Value):

\* H (Hue):Defines the type of color (e.g., red, blue).

\* S (Saturation):Measures vividness - low S means muted colors, high S means vivid colors.

\* V (Value):Controls brightness - increasing V brightens the image. Contrary to option D, HSV aligns more closely with human perception than RGB, making it suitable for segmentation and color-based analysis.

Exact Extract from HCIP-AI EI Developer V2.5:

"HSV separates hue, saturation, and brightness, making it closer to human vision perception and suitable for color-based image analysis." Reference:HCIP-AI EI Developer V2.5 Official Study Guide - Chapter: Color Spaces
