

# 100% Pass Process-Automation - Accurate Salesforce Process Automation Accredited Professional Vce Format

## Salesforce Process Automation Exam: Prep Steps

- 1 Leverage Official Salesforce Resources**  
Utilize Salesforce-provided study guides, documentation, and online training 
- 2 Hands-On Experience is Paramount**  
Create automation processes in a sandbox environment 
- 3 Deep Dive into Automation Tools**  
Familiarize with Flow, Workflow Rules, and Process Builder 
- 4 Understand Automation Best Practices**  
Study best practices for design, optimization, and scalability 
- 5 Practice with Sample Questions and Mock Exams**  
Use sample questions to gauge exam readiness 
- 6 Focus on Testing, Distribution, and Monitoring**  
Learn about testing, deploying, and oversees Salesforce automation 

DOWNLOAD the newest ActualTestsIT Process-Automation PDF dumps from Cloud Storage for free:

Three versions for Process-Automation exam materials are available, and you can choose the most suitable one according to your own needs. Process-Automation PDF version is printable, and if you like the hard one, you can print them into paper. Process-Automation Soft test engine supports MS operating system, and it can install in more than 200 computers, and it can also stimulate the real exam environment, so that you know the procedures for the exam. Process-Automation Online soft test engine is convenient and easy to learn, and it has testing history and performance review, and you can have a review what you have learnt.

Salesforce Process-Automation Accredited Professional certification exam is ideal for professionals who work with Salesforce on a daily basis. Process-Automation exam is designed to test the candidate's knowledge of Salesforce process automation tools and best practices. Process-Automation exam is also designed to assess the candidate's ability to design and implement automation solutions that meet business requirements. Salesforce Process Automation Accredited Professional certification exam is recognized by many companies as a valuable credential for professionals who work in the Salesforce ecosystem.

Salesforce Process Automation Accredited Professional Exam is an excellent certification for professionals looking to enhance their automation skills on the Salesforce platform. Process-Automation Exam covers a wide range of topics related to process automation, and candidates who pass it can demonstrate their ability to automate complex business processes and deliver more

value to their organizations. If you are a Salesforce professional looking to advance your career in process automation, this certification is definitely worth considering.

## Pass Process-Automation Test - Braindumps Process-Automation Pdf

ActualTestsIT has made these formats so the students don't face issues while preparing for Salesforce Process Automation Accredited Professional (Process-Automation) certification exam dumps and get success in a single try. The web-based format is normally accessed through browsers like Microsoft Edge, Google Chrome, Firefox, and Safari. This format doesn't require any extra plugins so users can also use this format to pass Salesforce Process-Automation test with pretty good marks.

Salesforce Process-Automation (Salesforce Process Automation Accredited Professional) Certification Exam is a globally recognized certification that demonstrates the ability to design and build process automation solutions using the Salesforce platform. Salesforce Process Automation Accredited Professional certification exam covers various topics, including process automation, process builder, visual workflow, and approval processes. It is an excellent opportunity for individuals to showcase their skills and knowledge of process automation and get recognized as an expert in the field.

## Salesforce Process Automation Accredited Professional Sample Questions (Q36-Q41):

### NEW QUESTION # 36

An Administrator at Universal Containers (UC) has received a requirement to enable field history tracking for multi-select picklist (Country) on the Lead object and to capture the country's old and new values. What is the best way the Administrator can meet this requirement?

- A. Apex Trigger
- **B. After-save Record Triggered Flow**
- C. No action required since this is a standard feature.
- D. Since the requirement involves multi-select picklist, raise a case with Salesforce to activate field history tracking

**Answer: B**

Explanation:

Salesforce's standard field history tracking does not support multi-select picklists. To track changes (old vs. new values) on such fields, a custom solution is needed. The best declarative approach is to use an after-save Record-Triggered Flow, which compares the previous and current values and stores the result in a custom object or field for auditing.

A). Correct - Use a Record-Triggered Flow to capture the prior value using the \$Record\_\_Prior global variable and compare it with the current value.

Incorrect Options:

B). Field history tracking does not support multi-select picklists natively.

C). Raising a case will not enable unsupported standard functionality.

D). Apex Trigger is possible but not required since Flow can handle this declaratively.

Reference Extracts from Salesforce Process Automation Study Guide:

"Multi-select picklists are not supported by standard field history tracking. Use Flow to track changes to these fields."

"Record-Triggered Flows can access \$Record\_\_Prior to detect field changes."

### NEW QUESTION # 37

What is a valid distribution method for an Autolaunched Flow with a schedule trigger?

- A. Metadata and Tooling API
- **B. Scheduled time and frequency**
- C. Custom Apex Classes
- D. REST API

**Answer: B**

Explanation:

An Autolaunched Flow with a Schedule Trigger is configured to run at a specified start time and frequency (daily, weekly, etc.).

These flows do not rely on user actions or APIs to execute - instead, they are set to run at defined intervals using the flow's internal scheduling configuration.

Correct Option:

C). Scheduled time and frequency: # Salesforce allows admins to configure start dates and times as well as frequency when setting up an Autolaunched Flow with a Schedule Trigger.

Incorrect Options:

A). Metadata and Tooling API: Used for deployment, not for flow execution.

B). REST API: Can invoke autolaunched flows, but this is unrelated to the schedule trigger.

D). Custom Apex Classes: Not needed for scheduling standard flows; only required for complex logic beyond Flow's capabilities.

Reference Extracts from Salesforce Help Documentation on Scheduled Flows:

"Autolaunched Flows with a Schedule Trigger run in the background at scheduled times without user interaction."

"Specify start time and frequency during configuration."

Reference: Salesforce Help Documentation on Scheduled Flows.

### NEW QUESTION # 38

In which three ways can a flow designer distribute flows that involve user interaction?

- A. Custom Lightning web components
- B. Flow actions
- C. Microservice Frame
- D. Lightning pages
- E. Field Portal Mobile App

**Answer: A,B,D**

Explanation:

Flows involving user interaction can be distributed in several ways, including through Flow actions (quick actions that launch a flow), embedding in Custom Lightning Web Components (LWCs) for more complex UIs or specific functionality, and adding to Lightning Pages via the Lightning App Builder for visibility on record, app, home, and other page types. Reference: Salesforce Help - Distribute Flows

### NEW QUESTION # 39

What does debug option in Flow Builder allow an Administrator to do?

- A. Roll back to previously executed actions, callouts, and changes committed to the database.
- B. Enter custom values for input variables and view step-wise details.
- C. Run the most recent saved version of the flow with auto-save mode turned OFF.
- D. Version a Flow that can be saved as current version after the Flow has run.

**Answer: B**

Explanation:

The Debug button in Flow Builder is designed to help administrators test their flows in real-time. When using Debug, admins can:

Enter custom values for input variables.

Observe the flow's path of execution.

Monitor how decisions and assignments behave.

See outputs, errors, and element-by-element outcomes.

This helps identify logic issues before activating the flow.

A). Correct - The Debug tool is intended for entering input values and viewing detailed flow execution results.

Incorrect Options:

B). Auto-save settings are unrelated to the Debug tool.

C). Flow versioning is handled manually and not linked to debugging.

D). Flows do not support rollbacks of committed database changes during debugging.

Reference Extracts from Salesforce Process Automation Study Guide:

"Use Debug to test a flow's logic step-by-step, passing values into input variables and monitoring outcomes."

"Debugging helps trace decision paths, assignments, and screen navigation."

### NEW QUESTION # 40

Cloud Kicks (CK) evaluates outbound message actions to send pricing updates to external systems. Which two things should CK keep in mind?

- A. An Administrator can configure up to five outbound message types for guaranteed delivery.
- B. An audit trail is not available for outbound messages.
- C. Outbound messages could potentially be delivered out of order.
- D. If the endpoint is unavailable, outbound messages are lost after three unsuccessful retries.

**Answer: B,C**

Explanation:

Outbound Messages are part of declarative integrations in Salesforce and are triggered from Workflow Rules or Approval Processes. However, they come with limitations.

A). Correct - Outbound Messages do not provide a native audit trail. Admins must monitor via outbound messaging logs or Setup > Outbound Messages.

C). Correct - Because delivery is asynchronous and Salesforce retries messages independently, the order of delivery cannot be guaranteed.

Incorrect Options:

B). There is no documented limit of " five outbound message types for guaranteed delivery. "D). Salesforce retries failed outbound messages for up to 24 hours, not just three attempts, and messages are not " lost " until that retry window is exceeded.

Reference Extracts from Salesforce Process Automation Study Guide:

"Salesforce doesn't guarantee delivery order of outbound messages."

"Outbound messages are retried for up to 24 hours if the endpoint is unavailable."

"Admins can monitor outbound messages via Setup, but audit trails are not automatic."
