Linux Essentials Certificate Exam - version 1.6 certification is ideal for students, professionals, and enthusiasts who want to start their journey into the world of Linux.

Lpi Linux Essentials Certificate Exam - version 1.6 Sample Questions (Q20-Q25):

NEW QUESTION # 20

What is the preferred source for the installation of new applications in a Linux based operating system?

- A. The distribution's package repository
- B. The vendor's version management system
- C. A retail store
- D. The vendor's website
- E. A CD-ROM disk

Answer: A

Explanation:

Explanation

The distribution's package repository is the preferred source for the installation of new applications in a Linux based operating system. A package repository is a collection of software packages that are maintained by the distribution and can be easily installed, updated, or removed using a package manager. Package repositories offer several advantages, such as:

- * They ensure compatibility and stability with the system and other packages.
- * They provide security updates and bug fixes for the packages.
- * They reduce the risk of malware or corrupted files.
- * They simplify the dependency management and configuration of the packages.

The other sources are not preferred because they may not offer these benefits and may cause problems with the system. The vendor's version management system, the vendor's website, or a CD-ROM disk may contain packages that are not compatible with the distribution or may conflict with other packages. A retail store may not have the latest or the most suitable packages for the system. References:

NEW QUESTION # 21

Which of the following keys can be pressed to exit less?

- A. x
- B. !
- C. e
- D. 0
- E. q

Answer: E

NEW QUESTION # 22

The current directory contains the following file:

```
-rw-r-r- 1 root exec 24551 Apr 2 12:36 test.sh
```

The file contains a valid shell script, but executing this file using `./test.sh` leads to this error:

```
bash: ./test.sh: Permission denied
```

What should be done in order to successfully execute the script?

- A. The user executing the script should be added to the `execgroup`.
- B. The SetUID bit should be set in the file's permissions
- C. The file's extension should be changed from `.sh` to `.bin`.
- D. The script should be run using `#!/test.sh` instead of `./test.sh`.
- E. The execute bit should be set in the file's permissions.

Answer: E

NEW QUESTION # 23

What command displays manual pages? (Specify ONLY the command without any path or parameters.)

Answer:

Explanation:

```
man
```

Explanation:

The command that displays manual pages for Linux commands is the `man` command. The `man` command is used to display the manual pages for a given command or topic. For example, to view the manual page for the `ls` command, you can type:

```
man ls
```

This will open the manual page for the `ls` command in a pager, which allows you to scroll and search through the text. You can also specify the section number of the manual page if there are multiple pages with the same name. For example, to view the manual page for the `passwd` command in section 1, you can type:

```
man 1 passwd
```

The `man` command is one of the most useful and important commands for learning and using Linux. It provides detailed information about the syntax, options, arguments, examples, and other aspects of a command or topic. You can also use the `--help` option to get a brief summary of the usage and options of a command. For example, to get a quick help for the `man` command, you can type:

```
man --help
```

To learn more about the `man` command and how to use it effectively, you can refer to the following resources:
