

Exam PDII Objectives Pdf, Reliable PDII Study Guide

2026 Latest TorrentVCE PDII PDF Dumps and PDII Exam Engine Free Share: https://drive.google.com/open?id=1MDkP0X96NR3gOgyWaqw6zO_d6mGXkXS7

Your personal experience convinces all. You can easily download the free demo of PDII brain dumps on our TorrentVCE. Our professional IT team will provide the most reliable PDII study materials to you. If you have any questions about purchasing PDII Exam software, you can contact with our online support who will give you 24h online service.

Salesforce Certified Platform Developer II (PDII) exam is designed for experienced developers who want to demonstrate their advanced knowledge and skills in developing custom applications on the Salesforce platform. PDII exam measures a candidate's ability to design and implement complex business logic and advanced programming concepts, as well as their understanding of Apex, Visualforce, and other Salesforce technologies.

To prepare for the Salesforce PDII Certification Exam, candidates can attend Salesforce training classes, review the official Salesforce documentation, and take practice exams. It is also recommended that candidates gain hands-on experience in developing custom applications on the Salesforce platform to build their skills and knowledge.

allows you free download, you can see the validity of the questions and format of the PDII Actual Test. In addition, the price of our PDII examination material is reasonable and affordable for all of you. Just come and buy our PDII training questions!

Salesforce Platform Developer II Sample Questions (Q111-Q116):

NEW QUESTION # 111

An Apex trigger creates a Contract record every time an Opportunity record is marked as Closed and Won.

This trigger is working great, except (due to a recent acquisition) Opportunity records need to be loaded into the Salesforce instance.

When a test batch of records are loaded, the Apex trigger creates Contract records. A developer is tasked with preventing Contract records from being created when mass Loading the Opportunities, but the daily users still need to have the Contract records created.

What is the most extendable way to update the Apex trigger to accomplish this?

- A. Add a validation rule to the Contract to prevent Contract creation by the user who loads the data.
- B. Use a list custom setting to disable the trigger for the user who loads the data.
- C. Add the Profile ID of the user who loads the data to the trigger, so the trigger will not fire for this user.
- D. Use a hierarchy custom setting to skip executing the logic inside the trigger for the user who loads the data.

Answer: D

NEW QUESTION # 112

Which statement is true regarding savepoints?

- A. You can roll back to any savepoint variable created in any order.
- B. Static variables are not reverted during a rollback.
- C. Savepoints are not limited by DML statement governor limits.
- D. Reference to savepoints can cross trigger invocations.

Answer: B

Explanation:

When rolling back to a savepoint, any DML operations that occurred after that savepoint are undone, but static variables are not reverted. Therefore, when a rollback occurs, the state of all static variables at the time of the rollback remains the same as it was just before the rollback. NEW QUESTION # 113

A corporation has many different Salesforce orgs, with some different objects and some common objects, and wants to build a single Java application that can create, retrieve, and update common object records in all of the different orgs.

Which method of integration should the application use?

- A. Apex REST Web Service
- B. SOAP API with the Partner WSDL
- C. Metadata APT
- D. SOAP API with the Enterprise WSDL

Answer: B

Explanation:

The SOAP API with the Partner WSDL is ideal for building integrations that work across multiple Salesforce orgs, especially when they have varying schemas. The Partner WSDL is designed to be flexible and dynamic, catering to different metadata. References: SOAP API Developer Guide

NEW QUESTION # 114

A customer has a single Visualforce page that allows each user to input up to 1500 sales forecasts and instantly view pivoted forecast calculations. Users are complaining that the page is loading slowly, and they are seeing error messages regarding heap and view state limits.
