## SAP Certified Specialist - Implementation Consultant - SAP S/4HANA Cloud Private Edition Sample Questions (Q33-Q38):

### NEW QUESTION # 33

How do you set up SAP Test Automation by Tricentis for a customer?

- A. With an app in SAP Business Technology Platform
- B. With an API from the SAP Business Accelerator Hub
- C. With an app in SAP Cloud ALM
- D. With an integration package from SAP Signavio Process Navigator

**Answer: C**

Explanation:

To set up SAP Test Automation by Tricentis for a customer, utilize the SAP Cloud ALM platform. SAP Cloud ALM provides integrated test automation capabilities powered by Tricentis, enabling efficient test management and execution within the SAP environment.

Option A: With an app in SAP Business Technology Platform

This option is incorrect. While SAP Business Technology Platform offers various services, test automation setup with Tricentis is

#### NEW QUESTION # 34

When is a customer required to upgrade their SAP S/4HANA Cloud Private Edition system?

- **A. When the base release falls out of mainstream maintenance**
- B. When the latest base release is launched
- C. When two support packs have been released for the current base release
- D. When the current base release has only 12 months of mainstream maintenance remaining

**Answer: A**

Explanation:

SAP S/4HANA Cloud, private edition, follows a structured release and maintenance schedule. Customers are required to upgrade their systems when the current base release reaches the end of its mainstream maintenance period.

Option A: When the latest base release is launched

This option is incorrect. Customers are not mandated to upgrade immediately upon the release of a new base version.

Option B: When the base release falls out of mainstream maintenance

This option is correct. To ensure continued support and compliance, customers must upgrade when their current release exits mainstream maintenance.

Option C: When the current base release has only 12 months of mainstream maintenance remaining This option is incorrect. While planning should commence as maintenance end approaches, an upgrade is not compulsory at the 12-month mark.

Option D: When two support packs have been released for the current base release This option is incorrect. The release of support packs does not dictate mandatory upgrade timelines.

Therefore, customers are required to upgrade their SAP S/4HANA Cloud, private edition systems when the base release falls out of mainstream maintenance.

#### NEW QUESTION # 35

Which of the following analyses can you create from the Manage KPIs and Reports app? Note: There are 3 correct answers to this question.

- **A. Multidimensional Reports**
- **B. Review Booklets**
- C. Object Views
- D. Lumira Dashboards
- **E. SAC Stories**

**Answer: A,B,E**

Explanation:

The Manage KPIs and Reports app in SAP S/4HANA Cloud Private Edition enables users to create and manage various analytical content to monitor and evaluate business performance. The following analyses can be created using this app:

Option A: Object Views

This option is incorrect. The app does not support the creation of Object Views.

Option B: Review Booklets

This option is correct. Users can create Review Booklets, which compile multiple reports and KPIs into a consolidated format for comprehensive analysis.

Option C: Lumira Dashboards

This option is incorrect. The app does not facilitate the creation of Lumira Dashboards.

Option D: Multidimensional Reports

This option is correct. The app allows for the creation of Multidimensional Reports, enabling users to analyze data across various dimensions and hierarchies.

Option E: SAC Stories

This option is correct. Users can create SAP Analytics Cloud (SAC) Stories, which are interactive reports and dashboards that provide insights into business data.

In summary, the Manage KPIs and Reports app supports the creation of Review Booklets, Multidimensional Reports, and SAC Stories, providing users with versatile tools to analyze and visualize business performance effectively.

### NEW QUESTION # 36

When do you use the SAP Fiori app "Launchpad App Manager?" Note: There are 2 correct answers to this question.

- A. To create custom catalogs
- B. To manage business catalogs with references to SAP Fiori app tiles in technical catalogs
- C. To maintain technical catalogs
- D. To view where launchpad content is used

**Answer: A,C**

Explanation:

The "Launchpad App Manager" Fiori app in SAP S/4HANA Cloud Private Edition is used to manage Fiori Launchpad content, such as catalogs and tiles. Let's evaluate its uses:

- \* A. To create custom catalogs: This is correct. The Launchpad App Manager allows administrators to create custom catalogs, grouping Fiori app tiles for specific roles or purposes, enhancing user access in the Launchpad.
- \* B. To manage business catalogs with references to SAP Fiori app tiles in technical catalogs: This is incorrect. Business catalogs are managed via the "Maintain Business Roles" app, not the Launchpad App Manager. The latter focuses on technical and custom catalogs, not business catalog references.
- \* C. To maintain technical catalogs: This is correct. The app is used to maintain technical catalogs, which contain references to Fiori apps and their configurations (e.g., OData services). These catalogs are then linked to business roles.
- \* D. To view where launchpad content is used: This is incorrect. Viewing usage of Launchpad content (e.g., where tiles are assigned) is handled by tools like the "Launchpad Content Manager" or role analysis, not the Launchpad App Manager's primary function.

In summary, the Launchpad App Manager is used for A (To create custom catalogs) and C (To maintain technical catalogs).

### NEW QUESTION # 37

Which of the following are captured in a completed Digital Discovery Assessment? Note: There are 2 correct answers to this question.

- A. Business role requirements
- B. SAP Fiori application extensions
- C. Target customer go-live date
- D. Known integration requirements

**Answer: C,D**

Explanation:

The Digital Discovery Assessment (DDA) is a tool used during the sales cycle (Discover phase of the SAP Activate Methodology) to evaluate a customer's requirements and recommend the best SAP S/4HANA Cloud deployment option—Public or Private Edition. For SAP S/4HANA Cloud Private Edition, the DDA captures detailed information to scope the implementation project. Let's analyze the options:

- \* A. Business role requirements: While business roles (e.g., authorizations, user roles) are critical for implementation, they are typically defined and configured during the Prepare and Explore phases of the SAP Activate Methodology, not captured in the DDA. The DDA focuses on high-level requirements rather than granular role-specific details. Thus, this is not a correct answer.
- \* B. Known integration requirements: This is correct. The DDA, especially in the Detailed Discovery phase, collects information about integrations with other SAP Cloud solutions (e.g., SAP SuccessFactors, SAP Ariba) or non-SAP systems that the customer already has or plans to adopt. This is crucial for Private Edition implementations, which often involve complex landscapes requiring extensive integration. SAP documentation confirms that identifying known integration requirements is a key output of the DDA.
- \* C. Target customer go-live date: This is also correct. The DDA includes project-specific details such as the target go-live date, which helps define the timeline and scope of the implementation. This information is entered during the Detailed Discovery to align expectations and plan resources effectively, as noted in SAP's learning materials.

\* D. SAP Fiori application extensions: This is incorrect. While SAP Fiori is integral to SAP S/4HANA Cloud Private Edition for its user interface, the DDA does not specifically capture details about Fiori application extensions. Extensions are typically addressed later in the implementation process (e.g., during the Realize phase) using tools like SAP Business Technology Platform (BTP). The DDA focuses on business processes, integrations, and project parameters rather than UI customizations.

In conclusion, the DDA for SAP S/4HANA Cloud Private Edition captures B (known integration requirements) and C (target customer go-live date) as key elements to inform the deployment recommendation and project scoping.
