2026 Latest BraindumpsIT CAS-004 PDF Dumps and CAS-004 Exam Engine Free Share: <https://drive.google.com/open?id=1nPHM46zicq1XoHzwKYD9THPrwzjedhzR>

We have always been made rapid progress on our CompTIA CAS-004 training materials because of the merits of high-efficiency and perfect after-sales services online for 24 hours. Studying with our CAS-004 Actual Exam, you can get the most professional information and achieve your dreaming scores by your first go.

BraindumpsIT customizable practice exams (desktop and web-based) help students know and overcome their mistakes. The customizable CompTIA CAS-004 practice test means that the users can set the CompTIA Advanced Security Practitioner (CASP+) Exam (CAS-004) Dumps and time according to their needs so that they can feel the real-based CAS-004 exam scenario and learn to handle the pressure.

Learn About Exam Pattern With CAS-004 PDF Dumps

Do you want to pass your CompTIA Advanced Security Practitioner (CASP+) Exam exam? If so, BraindumpsIT is the ideal place to begin. BraindumpsIT provides comprehensive CAS-004 exam questions preparation in two simple formats: a pdf file format and an CompTIA CAS-004 online practice test engine. If you fail your CompTIA Advanced Security Practitioner (CASP+) Exam (CAS-004) Exam, you can obtain a full refund and a 20% discount! Continue reading to discover more about the essential aspects of these excellent CAS-004 exam questions.

CompTIA Advanced Security Practitioner (CASP+) Exam Sample Questions (Q229-Q234):

NEW QUESTION # 229

A healthcare system recently suffered from a ransomware incident. As a result, the board of directors decided to hire a security consultant to improve existing network security. The security consultant found that the healthcare network was completely flat, had no privileged access limits, and had open RDP access to servers with personal health information. As the consultant builds the

remediation plan, which of the following solutions would BEST solve these challenges?
(Choose three.)

- A. PAM
- B. Remote access VPN
- C. BGP
- D. Network segmentation
- E. MFA
- F. NAC
- G. SD-WAN

Answer: A,D,E

Explanation:

B: PAM (Privileged Access Management): This solution would help limit privileged access to the network and ensure that only authorized users can access sensitive information.

D: MFA (Multi-Factor Authentication): This solution would add an additional layer of security to prevent unauthorized access to the network.

E: Network Segmentation: This solution would help isolate different parts of the network and reduce the attack surface by creating distinct security zones for different types of resources, such as servers containing personal health information.

NEW QUESTION # 230

Due to locality and budget constraints, an organization's satellite office has a lower bandwidth allocation than other offices in the organization. As a result, the local security infrastructure staff is assessing architectural options that will help preserve network bandwidth and increase speed to both internal and external resources while not sacrificing threat visibility.

Which of the following would be the BEST option to implement?

- A. Content delivery network
- B. Local caching
- C. Distributed connection allocation
- D. SD-WAN vertical heterogeneity

Answer: D

Explanation:

Explanation

SD-WAN (software-defined wide area network) vertical heterogeneity is a technique that can help preserve network bandwidth and increase speed to both internal and external resources while not sacrificing threat visibility. SD-WAN vertical heterogeneity involves using different types of network links (such as broadband, cellular, or satellite) for different types of traffic (such as voice, video, or data) based on their performance and security requirements. This can optimize the network efficiency and reliability, as well as provide granular visibility and control over traffic flows. Distributed connection allocation is not a technique for preserving network bandwidth and increasing speed, but a method for distributing network connections among multiple servers or devices. Local caching is not a technique for preserving network bandwidth and increasing speed, but a method for storing frequently accessed data locally to reduce latency or load times. Content delivery network is not a technique for preserving network bandwidth and increasing speed, but a system of distributed servers that deliver web content to users based on their geographic location.

NEW QUESTION # 231

A junior developer is informed about the impact of new malware on an Advanced RISC Machine (ARM) CPU, and the code must be fixed accordingly. Based on the debug, the malware is able to insert itself in another process memory location.

Which of the following technologies can the developer enable on the ARM architecture to prevent this type of malware?

- A. Virtual memory encryption
- B. Total memory encryption
- C. Execute never
- D. No-execute

Answer: D

NEW QUESTION # 232

A bank is working with a security architect to find the BEST solution to detect database management system compromises. The solution should meet the following requirements:

- Work at the application layer
- Send alerts on attacks from both privileged and malicious users
- Have a very low false positive

Which of the following should the architect recommend?

- A. UTM
- **B. DAM**
- C. NIPS
- D. WAF
- E. FIM

Answer: B

Explanation:

A DAM solution is a security tool that monitors and analyzes database activity for signs of compromise or malicious activity. It is designed to work at the application layer and can send alerts on attacks from both privileged and malicious users. A DAM solution can also have a very low false positive rate, making it an effective tool for detecting database management system compromises.

NEW QUESTION # 233

A security architect is implementing a web application that uses a database back end. Prior to the production, the architect is concerned about the possibility of XSS attacks and wants to identify security controls that could be put in place to prevent these attacks.

Which of the following sources could the architect consult to address this security concern?

- A. OVAL
- B. IEEE
- C. SDLC
- **D. OWASP**

Answer: D

Explanation:

OWASP is a resource used to identify attack vectors and their mitigations, OVAL is a vulnerability assessment standard OWASP (Open Web Application Security Project) is a source that the security architect could consult to address the security concern of XSS (cross-site scripting) attacks on a web application that uses a database back end. OWASP is a non-profit organization that provides resources and guidance for improving the security of web applications and services. OWASP publishes the OWASP Top 10 list of common web application vulnerabilities and risks, which includes XSS attacks, as well as recommendations and best practices for preventing or mitigating them. SDLC (software development life cycle) is not a source for addressing XSS attacks, but a framework for developing software in an organized and efficient manner.

OVAL (Open Vulnerability and Assessment Language) is not a source for addressing XSS attacks, but a standard for expressing system configuration information and vulnerabilities. IEEE (Institute of Electrical and Electronics Engineers) is not a source for addressing XSS attacks, but an organization that develops standards for various fields of engineering and technology. NEW QUESTION # 234

.....

According to the different demands from customers, the experts and professors designed three different versions for all customers. According to your need, you can choose the most suitable version of our CompTIA Advanced Security Practitioner (CASP+) Exam guide torrent for yourself. The three different versions have different functions. If you decide to buy our CAS-004 Test Guide, the online workers of our company will introduce the different function to you. You will have a deep understanding of the three

CAS-004 Reliable Exam Book: https://www.braindumpsit.com/CAS-004_real-exam.html

Not Ready for Prime Time, I have also tried to CAS-004 avoid examples that illustrate a detail of the language but serve no other useful purpose. What you need may be an internationally-recognized CAS-004 certificate, perhaps using the time available to complete more tasks.

To do this you just need to pass CAS-004 exam, which is quite challenging and demands thorough CompTIA Advanced Security Practitioner (CASP+) Exam (CAS-004) exam preparation, The website pages of our product provide the details of our CompTIA Advanced Security Practitioner (CASP+) Exam learning questions.

To improve our products' quality we employ first-tier experts and professional staff and to ensure that all the clients can pass the test we devote a lot of efforts to compile the CAS-004 study materials.
