

Fantastic New NGFW-Engineer Exam Answers—Find Shortcut to Pass NGFW-Engineer Exam

www.nwexam.com PDF

Section	Weight	Objectives
		<ul style="list-style-type: none">- Use APIs to automate deployment- Manage third-party services to deploy NGFWs (e.g., Kubernetes, hypervisors, CSPs, Terraform, Ansible)- Use on-premises centralized management<ul style="list-style-type: none">• Panorama• Templates and device groups• Pre- and post-ruleset- Build Application Command Center (ACC) dashboards and custom reports

What type of questions are on the Palo Alto NGFW-Engineer exams?

- Single answer multiple choice
- Multiple answer multiple choice
- Drag and Drop (DND)
- Router Simulation
- Testlet

NGFW-Engineer Practice Exam Questions.

Grab an understanding from these [Palo Alto NGFW-Engineer](#) sample questions and answers and improve your NGFW-Engineer exam preparation towards attaining a Next-Generation Firewall Engineer Certification. Answering these sample questions will make you familiar with the types of questions you can expect on the actual exam. Doing practice with Next-Generation Firewall Engineer questions and answers before the exam as much as possible is the key to passing the Palo Alto NGFW-Engineer certification exam.

Next-Generation Firewall Engineer Sample Questions:-

01. What is the function of a Certificate Revocation List (CRL) in a PKI?

- a) Lists expired certificates
- b) Lists certificates that have been revoked before their expiration date
- c) Lists all issued certificates
- d) Lists certificates pending renewal

Answer: b

02. How do Zone Protection Profiles enhance network security?

- a) By providing protection against flood attacks, reconnaissance scans, and packet-based threats

Our NGFW-Engineer prep torrent boosts the highest standards of technical accuracy and only use certificated subject matter and experts. We provide the latest and accurate NGFW-Engineer exam torrent to the client and the questions and the answers we provide are based on the real exam. We can promise to you the passing rate is high and about 98%-100%. Our NGFW-Engineer Test Braindumps also boosts high hit rate and can stimulate the exam to let you have a good preparation for the NGFW-Engineer exam. Your success is bound with our NGFW-Engineer exam questions.

Do you always feel that your gains are not proportional to your efforts without valid NGFW-Engineer study torrent? Do you feel that you always suffer from procrastination and cannot make full use of your sporadic time? If your answer is absolutely yes, then we would like to suggest you to try our NGFW-Engineer Training Materials, which are high quality and efficiency NGFW-Engineer test tools. Your success is 100% ensured to pass the NGFW-Engineer exam and acquire the dreaming certification which will enable you to reach for more opportunities to higher incomes or better enterprises.

Pass Guaranteed Palo Alto Networks - Updated New NGFW-Engineer Exam Answers

Our NGFW-Engineer exam prep can bring you high quality learning platform to pass the variety of exams. NGFW-Engineer guide dumps are elaborately composed with major questions and answers. NGFW-Engineer test question only needs 20 hours to 30

hours to practice. There is important to get the NGFW-Engineer Certification as you can. There is a fabulous product to prompt the efficiency--the NGFW-Engineer exam prep, as far as concerned, it can bring you high quality learning platform to pass the variety of exams.

Palo Alto Networks NGFW-Engineer Exam Syllabus Topics:

Topic	Details
Topic 1	<ul style="list-style-type: none"> Integration and Automation: This section measures the skills of Automation Engineers in deploying and managing Palo Alto Networks NGFWs across various environments. It includes the installation of PA-Series, VM-Series, CN-Series, and Cloud NGFWs. The use of APIs for automation, integration with third-party services like Kubernetes and Terraform, centralized management with Panorama templates and device groups, as well as building custom dashboards and reports in Application Command Center (ACC) are key topics.
Topic 2	<ul style="list-style-type: none"> PAN-OS Device Setting Configuration: This section evaluates the expertise of System Administrators in configuring device settings on PAN-OS. It includes implementing authentication roles and profiles, and configuring virtual systems with interfaces, zones, routers, and inter-VSYS security. Logging mechanisms such as Strata Logging Service and log forwarding are covered alongside software updates and certificate management for PKI integration and decryption. The section also focuses on configuring Cloud Identity Engine User-ID features and web proxy settings.
Topic 3	<ul style="list-style-type: none"> PAN-OS Networking Configuration: This section of the exam measures the skills of Network Engineers in configuring networking components within PAN-OS. It covers interface setup across Layer 2, Layer 3, virtual wire, tunnel interfaces, and aggregate Ethernet configurations. Additionally, it includes zone creation, high availability configurations (active and active, active and passive), routing protocols, and GlobalProtect setup for portals, gateways, authentication, and tunneling. The section also addresses IPSec, quantum-resistant cryptography, and GRE tunnels.

Palo Alto Networks Next-Generation Firewall Engineer Sample Questions (Q20-Q25):

NEW QUESTION # 20

When integrating Kubernetes with Palo Alto Networks NGFWs, what is used to secure traffic between microservices?

- A. Panorama role-based access control
- B. CN-Series firewalls
- C. Ansible automation modules
- D. Service graph

Answer: B

Explanation:

When integrating Kubernetes with Palo Alto Networks NGFWs, the CN-Series firewalls are specifically designed to secure traffic between microservices in containerized environments. These firewalls provide advanced security features like Application Identification (App-ID), URL filtering, and Threat Prevention to secure communication between containers and microservices within a Kubernetes environment.

NEW QUESTION # 21

An administrator must perform several actions on a fleet of firewalls from a central Panorama instance. To maintain efficiency, the administrator wants to only perform actions that do not require switching context into each firewall's individual web interface.

Which set of actions is available to the administrator directly from the Panorama UI?

- A. Creating a new VLAN
Assigning an interface to the new VLAN
Configuring a new DHCP server on the firewall

- **B. Modifying a pre-rule**
Editing a shared service object
Creating a new certificate profile
- C. Configuring a new IPSec tunnel
Modifying the IKE gateway
Changing the DNS server settings of the firewall
- D. Accessing the CLI
Restarting the device
Installing the latest content and software versions

Answer: B

Explanation:

Panorama allows centralized management of shared and device-group-scoped configuration objects and policies, including modifying pre-rules, editing shared service objects, and creating certificate profiles, all directly from the Panorama UI without switching into individual firewall interfaces.

NEW QUESTION # 22

A network administrator is configuring path monitoring for a primary static route to ensure immediate failback from a backup route. The administrator wants the primary route to become active again without any delay as soon as its path is restored. Which preemptive hold time value should the administrator configure to achieve this immediate failback?

- **A. 0**
- B. 1
- C. 2
- D. 3

Answer: A

Explanation:

A preemptive hold time of 0 causes the firewall to immediately fail back to the primary static route as soon as path monitoring detects that the primary path is restored, with no delay before traffic is switched back.

NEW QUESTION # 23

An administrator needs to perform several maintenance tasks on a managed firewall directly from the Panorama console, without using the Context Switch feature. Which set of tasks can the administrator fully execute from the Panorama UI? (Choose one answer)

- A. Download and install a new content update. View current firewall session details. Initiate a device reboot.
- **B. Edit a post-rule. Create a new certificate profile. Configure the firewall's hostname.**
- C. Modify the IP address of a Layer 3 interface. Configure a new local administrator account. Edit a pre-rule.
- D. Create a new zone. Configure a new virtual router. View the local ACC on the firewall.

Answer: B

Explanation:

Palo Alto Networks Panorama provides a centralized management platform that allows administrators to manage firewalls through two primary constructs: Templates and Device Groups. When working directly within the Panorama UI (without switching to the firewall's context), an administrator interacts with these constructs to push configurations down to the managed devices.

The tasks listed in Option C represent the core functionality of Panorama's hierarchical management:

* Edit a post-rule: Security policies are managed within Device Groups. Post-rules are specific rules that appear after any locally defined rules on the firewall, allowing Panorama to enforce a "bottom-line" security posture across all managed devices.

* Create a new certificate profile: Object management, including certificate profiles, is handled within Templates or Device Groups (depending on scope) and can be easily defined at the Panorama level.

* Configure the firewall's hostname: System-level settings, such as hostnames, DNS, and NTP, are managed via Templates.

Conversely, the other options include tasks that generally require a direct connection or a "Context Switch" to the specific firewall's management plane. For example, viewing real-time session details (Option A) or the local ACC (Option B) requires querying the specific firewall's dataplane. While Panorama can trigger a software update, performing a device reboot (Option A) or managing local administrator accounts (Option D) are typically performed either locally or through the context switch to ensure the administrator is

interacting with the device's specific local database rather than the global Panorama template.

NEW QUESTION # 24

Which statement applies to the relationship between Panorama-pushed Security policy and local firewall Security policy?

- A. The order of policy evaluation can be configured differently in different device groups.
- B. Panorama post-rules can be configured to be evaluated before local firewall policy for the purpose of troubleshooting.
- C. Local firewall rules are evaluated after Panorama pre-rules and before Panorama post-rules.
- D. When a policy match is found in a local firewall policy, if any Panorama shared post-rule is configured, it will still be evaluated.

Answer: C

Explanation:

Local firewall rules are evaluated after Panorama pre-rules (those applied before the firewall's local policies) and before Panorama post-rules (those applied after the firewall's local policies).

This ensures that the local firewall rules do not override the central Panorama policy and are only applied in the appropriate order within the policy evaluation sequence.

NEW QUESTION # 25

.....

First of all, we have the best and most first-class operating system, in addition, we also solemnly assure users that users can receive the information from the NGFW-Engineer certification guide within 5-10 minutes after their payment. Second, once we have written the latest version of the NGFW-Engineer certification guide, our products will send them the latest version of the NGFW-Engineer Test Practice question free of charge for one year after the user buys the product. Last but not least, our perfect customer service staff will provide users with the highest quality and satisfaction in the hours.
