## Latest WGU Information-Technology-Management Exam Fee & Certification Information-Technology-Management Training

With the high employment pressure, more and more people want to ease the employment tension and get a better job. The best way for them to solve the problem is to get the Information-Technology-Management certification. Because the certification is the main symbol of their working ability, if they can own the Information-Technology-Management certification, they will gain a competitive advantage when they are looking for a job. An increasing number of people have become aware of that it is very important for us to gain the Information-Technology-Management Exam Questions in a short time. Because all of them have realized that it is indispensable to our daily life and work.

## WGU Information Technology Management QGC1 Sample Questions (Q58-Q63):

### NEW QUESTION # 58

Which business layer implements the processes, organizational designs, and compensation structures that enable the company to execute plans?

- A. Corporate
- B. Strategy
- C. Operating
- D. Systems

**Answer: C**

Explanation:

The Operating layer is responsible for the execution of business processes, organizational structures, and compensation strategies. This layer ensures that the strategies defined at the corporate and strategic levels are effectively implemented. It focuses on operational management, workforce incentives, and aligning business activities with organizational goals.

:

Kaplan, R. S., & Norton, D. P. (1996). *The Balanced Scorecard: Translating Strategy into Action*. Harvard Business Press.

Porter, M. E. (1985). *Competitive Advantage: Creating and Sustaining Superior Performance*.

### NEW QUESTION # 59

What are two purposes of the IT Strategy Board in any organization? Choose 2 answers.

- A. Discover and review development in information technology
- B. Recommend opportunities and actions to benefit the organization
- C. Report IT issues to the CIO as they arise and implement the CIO's solutions
- D. Oversee hiring to enhance the implementation of future improvements
- E. Recognize the possibility of budget overages before they occur

**Answer: A,B**

### NEW QUESTION # 60

Which type of testing in the system development life cycle (SDLC) focuses on how different components of the software work together?

- A. Unit testing
- B. Parallel testing
- C. Integration testing
- D. Acceptance testing - Conducted to verify that the system meets business requirements and user needs, typically performed by end users or customers near the end of the SDLC; it is not focused on internal component integration.

**Answer: C**

Explanation:

Therefore, integration testing is the SDLC testing phase that specifically focuses on how different components of the software work together.

Explanation:

Comprehensive and Detailed Explanation From Exact Extract:

Within the SDLC, integration testing is the testing phase that focuses on how different components or modules of the software work together. After individual units or components have been tested in isolation (unit testing), integration testing verifies that the interactions, data flows, and interfaces between these components function correctly as a combined system segment.

Integration testing aims to:

Detect interface defects between modules.

Ensure that combined components communicate and cooperate as intended.

Validate that data passed between modules is correct and handled properly.

Why the other options are incorrect:

B: Unit testing - Focuses on individual components or functions in isolation to verify that each one works correctly on its own, not how they work together.

C: Parallel testing - Involves running the new system and the old system simultaneously to compare outputs, often used during system replacement or migration, not specifically about module interaction.

### NEW QUESTION # 61

Which statement describes the analysis phase of the systems development life cycle (SDLC)?

- A. Establishing a high-level strategy and goals for an intended project
- **B. Identifying end-user business requirements and refining project goals into defined functions and operations**
- C. Establishing full descriptions of the desired features and operations of the system
- D. Physically constructing software and information systems using programming languages

**Answer: B**

Explanation:

Analysis Phase in SDLC:

The analysis phase involves gathering detailed requirements from stakeholders to ensure the system aligns with business needs.

This phase translates high-level goals into specific functions, operations, and deliverables.

Key Activities in the Analysis Phase:

Engaging stakeholders and subject-matter experts.

Documenting requirements in detail (e.g., user stories, use cases).

Identifying potential constraints and refining goals.

Incorrect Options Analysis:

A . Physically constructing software: Part of the development phase.

B . Desired features descriptions: Happens in the design phase.

D . High-level strategy: Belongs to the planning phase.

and Documents of Information Technology Management:

"SDLC Analysis Phase Best Practices" (Gartner).

ITIL Requirement Gathering Framework (Axelos).

## NEW QUESTION # 62

Which process involves the use of monitoring tools to detect and respond to unauthorized access attempts in real time?

- **A. Intrusion detection**
- B. Penetration testing
- C. Log review
- D. Access control

**Answer: A**

Explanation:

Comprehensive and Detailed Explanation From Exact Extract:

Intrusion detection is the process of using monitoring tools and systems to identify and alert on unauthorized or suspicious activities on networks or hosts, often in real time. Intrusion Detection Systems (IDS) analyze traffic or system events to detect:

Unauthorized access attempts

Malicious or abnormal behavior

Known attack signatures or anomalies

When potential intrusions are detected, these systems can generate alerts, and in some configurations (IDS/IPS), they may also help automate responses or integrate with other security tools.

Why the other options are incorrect:

A . Penetration testing - Simulates attacks to find vulnerabilities but is periodic and manual, not continuous real-time monitoring.

B . Access control - Governs who is allowed to access what (through authentication and authorization). It is preventive, not primarily focused on real-time detection of unauthorized attempts once they occur.

C . Log review - Involves analyzing stored logs, often after the fact, for auditing or investigation. It is not necessarily real-time detection.

Therefore, the correct answer is D. Intrusion detection, because it is the process that specifically uses monitoring tools to detect and respond to unauthorized access attempts in real time.

## NEW QUESTION # 63

.....

The client can try out and download our Information-Technology-Management training materials freely before their purchase so as to have an understanding of our product and then decide whether to buy them or not. The website pages of our product provide the details of our Information-Technology-Management learning questions. You can have a better understanding if you read the

introductions of our Information-Technology-Management exam questions carefully. And you can also click on the buttons on our website to test the functions on many aspects.
