Plat-Dev-301 100% Accuracy & Plat-Dev-301 Reliable Dumps Files

The emerging Salesforce field creates a space for Salesforce Certified Platform Developer II - Multiple Choice (Plat-Dev-301) certification exam holders to accelerate their careers. Many unfortunate candidates don't get the Salesforce Plat-Dev-301 certification because they prepare for its Salesforce Certified Platform Developer II - Multiple Choice (Plat-Dev-301) exam questions from a Salesforce Plat-Dev-301 exam that dumps outdated material. It results in a waste of time and money. You can develop your skills and join the list of experts by earning this Salesforce Certified Platform Developer II - Multiple Choice (Plat-Dev-301) certification exam.

Salesforce Certified Platform Developer II - Multiple Choice Sample Questions (Q115-Q120):

NEW QUESTION # 115

A developer is debugging an Apex-based order creation process that has a requirement to have three savepoints, SP1, SP2, and SP3 {created in order}, before the final execution of the process.

During the final execution process, the developer has a routine to roll back to SP1 for a given condition. Once the condition is fixed, the code then calls 2 roll back to SP3 to continue with final execution. However, when the roll back to SP3 is called, a runtime error occurs.

Why does the developer receive a runtime error?

- A. The developer should have called SF2 before calling SP3.
- B. SP3 became invalid when SP1 was rolled back.
- C. The developer has too many DML statements between the savepoints.
- D. The developer used too many savepoints in one trigger session.

Answer: B

Explanation:

Savepoints in Apex are markers within a transaction and rolling back to an earlier savepoint (SP1) invalidates any savepoints created after it. Thus, SP3 is invalidated when the code rolls back to SP1, causing a runtime error when a rollback to SP3 is attempted.

NEW QUESTION # 116

Universal Containers wants to use a Customer Community with Customer Community Plus licenses to allow their customers access to track how many containers they have rented and when they are due back. Universal Containers uses a Private sharing model for External users. Many of their customers are multi-national corporations with complex Account hierarchies. Each account on the hierarchy represents a department within the same business. One of the requirements is to allow certain community users within the same Account hierarchy to see several departments' containers, based on a custom junction object that relates the Contact to the various Account records that represent the departments.

Which solution solves these requirements?

- A. A custom list view on the junction object with filters that will show the proper records based on owner
- **B. An Apex trigger that creates Apex managed sharing records based on the junction object's relationships**
- C. A Visualforce page that uses a custom controller that specifies without sharing [0 expose the records
- D. A Lightning web component on the Community Home Page that uses Lightning Data Services.

Answer: B

Explanation:

For community users within the same Account hierarchy to see records based on a custom junction object, Apex managed sharing can be used. An Apex trigger can create sharing records based on the junction object relationships, allowing users to see records from different departments as required.

NEW QUESTION # 117

A corporation has many different Salesforce orgs, with some different objects and some common objects, and wants to build a single Java application that can create, retrieve, and update common object records in all of the different orgs.

Which method of integration should the application use?

- A. SOAP API with the Enterprise WSDL
- **B. SOAP API with the Partner WSDL**
- C. Metadata APT
- D. Apex REST Web Service

Answer: B

Explanation:

The SOAP API with the Partner WSDL is ideal for building integrations that work across multiple Salesforce orgs, especially when they have varying schemas. The Partner WSDL is designed to be flexible and dynamic, catering to different metadata.

NEW QUESTION # 118

A company has a native iOS order placement app that needs to connect to Salesforce to retrieve consolidated information from many different objects in a JSON format.

Which is the optimal method to implement this in Salesforce?

- A. Apex REST callout
- B. Apex SOAP web service
- **C. Apex REST web service**
- D. Apex SOAP callout

Answer: C

Explanation:

Apex REST web services are the best method for creating custom endpoints that return data in a specific format, such as JSON, which is perfect for a native iOS application that needs to integrate with Salesforce for retrieving data.

NEW QUESTION # 119

A company wants to run different logic based on an Opportunity's record type. Which code segment handles this request and follows best practices?

- A)
- B)
- C)
- D)

- A. Option A
- B. Option D
- C. Option B
- **D. Option C**

Answer: D

Explanation:

The use of `getRecordTypeInfoByDeveloperName` is a best practice to handle record types. This approach avoids the need for SOQL queries, reducing the number of governor limits consumed, and efficiently retrieves record type Ids by their `DeveloperName`, which is consistent across all Salesforce environments.

NEW QUESTION # 120

.....

With the high pass rate of our Plat-Dev-301 exam questions as 98% to 100%, we can proudly claim that we are unmatched in the market for our accurate and latest Plat-Dev-301 exam torrent. You will never doubt about our strength on bringing you success and the according certification that you intent to get. We have testified more and more candidates' triumph with our Plat-Dev-301 practice materials. We believe you will be one of the winners like them.
