for you. Try our ITIL-5-Foundation study tool and absorb new knowledge. After a period of learning, you will find that you are making progress. The knowledge you have studied on our ITIL-5-Foundation Exam Question will enrich your life and make you wise. Our ITIL-5-Foundation real exam dumps are manufactured carefully, which could endure the test of practice. Stable and healthy development is our long lasting pursuit. In order to avoid fake products, we strongly advise you to purchase our ITIL-5-Foundation exam question on our official website.

## ITIL Foundation (Version 5) Sample Questions (Q18-Q23):

### NEW QUESTION # 18

Which option is CORRECT in the context of a digital product and a digital service?

- A. A digital service is limited to internal IT systems
- B. A digital service is independent of a digital product
- C. A digital product replaces the need for services
- **D. A digital service enables value through the use of digital products**

**Answer: D**

Explanation:

A digital service enables value through the use of digital products, so option A is correct. ITIL explains that digital services largely or fully rely on digital products, which are combinations of an organization's resources based on digital technology and designed to offer value. The service is what facilitates outcomes for consumers, while the product provides the underlying capabilities, technology, interfaces, data, and resources that make that possible. A digital product does not replace the need for services because service management is still required to support delivery, operation, support, and improvement. A digital service is not limited to internal IT systems, since it can serve internal or external consumers. It is also not independent of a digital product, because the product typically underpins the service relationship and service experience.

### NEW QUESTION # 19

How should an organization apply the ITIL Guiding Principles?

- A. Sequentially, according to a fixed order of priority
- **B. By considering the relevance of each principle in each situation**
- C. By relying on just one or two principles for efficiency
- D. As optional suggestions that can be ignored

**Answer: B**

Explanation:

The correct answer is D. ITIL Version 5 states that the ITIL Guiding Principles are recommendations that can guide an organization in all circumstances, regardless of changes in goals, strategies, type of work, or management structure. ITIL also states that organizations should not use only one or two principles. Instead, they should consider the relevance of each principle and how the principles complement each other. There is no fixed order or hierarchy among the principles; they are all equally important to the ITIL Value System, although some may be more critical than others in a specific situation. Therefore, option A is incorrect because the principles are not applied sequentially in a fixed order. Option B is incorrect because the principles are not casual suggestions to ignore; they provide decision-making guidance. Option C is incorrect because relying on only a few principles can lead to imbalance. The best approach is contextual, holistic, and practical application.

### NEW QUESTION # 20

Which ITIL concept includes governance, practices, and continual improvement?

- A. The ' deliver ' and ' support ' value chain activities
- B. The ' focus on value ' ITIL Guiding Principle
- C. The ' value streams and processes ' dimension
- **D. The ITIL Value System**

**Answer: D**

Explanation:

The ITIL concept that includes governance, practices, and continual improvement is the ITIL Value System, so option A is correct.

The Value System is the overarching model that shows how all major ITIL components work together to enable value creation. It includes guiding principles, governance, the value chain, management practices, and continual improvement. This integrated structure helps organizations align strategic direction with operational execution while remaining adaptable and focused on value. The deliver and support activities are only two parts of the value chain, not the whole system. A guiding principle is only one component of the Value System. A dimension is a perspective used to ensure holistic consideration.

Therefore, the only option that fully includes governance, practices, and continual improvement is the ITIL Value System.

#### NEW QUESTION # 21

Who is responsible for the procurement and use of services ?

- A. Service provider
- B. Digital product vendor
- C. Service consumer
- D. Sponsors

**Answer: C**

Explanation:

The correct answer is C. ITIL Version 5 defines a service consumer as an organization responsible for the procurement and use of services. This means the service consumer is the party that obtains services from a service provider and uses those services to enable value. Within a service consumer organization, ITIL identifies three important roles: customer, user, and sponsor. The customer defines service requirements and takes responsibility for outcomes. The user actually uses the service. The sponsor authorizes the budget for service consumption. However, the broader organization responsible for procuring and using the service is the service consumer. Option A is incorrect because the service provider is responsible for delivering and supporting services. Option B is incorrect because a digital product vendor provides or manages digital products, but this is not the ITIL definition asked here. Option D is incorrect because sponsors authorize the budget, but they are only one role within the service consumer organization.

#### NEW QUESTION # 22

How does an enabling value stream contribute to value creation?

- A. By defining customer outcomes and service expectations
- B. By acting as the primary interface with service consumers
- C. By replacing the need for core value streams
- D. By supporting the effective operation of core value streams

**Answer: D**

Explanation:

An enabling value stream contributes to value creation by supporting the operation and performance of core value streams. That is why option A is correct. Core value streams directly create or deliver value for service consumers, while enabling value streams provide the capabilities, resources, coordination, or support needed for those core streams to function effectively. Examples may include procurement, onboarding, internal platform management, or knowledge management processes that do not directly serve the customer at the final interaction point but are essential for smooth service creation and delivery. ITIL takes a holistic view of value creation and recognizes that many important workflows are indirect. These supporting streams do not replace core value streams, but they strengthen them by improving reliability, speed, quality, and consistency across the wider operating model.

#### NEW QUESTION # 23

.....

Do you need to find a high paying job for yourself? Well, by passing the ITIL-5-Foundation, you will be able to get your dream job. Make sure that you are buying our ITIL-5-Foundation brain dumps pack so you can check out all the products that will help you come up with a better solution.
