Practice Fortinet NSE8_812 Tests - Latest NSE8_812 Exam Cram

Fortinet certification NSE8_812 exam has become a very popular test in the IT industry, but in order to pass the exam you need to spend a lot of time and effort to master relevant IT professional knowledge. In such a time is so precious society, time is money. Itbraindumps provide a training scheme for Fortinet Certification NSE8_812 Exam, which only needs 20 hours to complete and can help you well consolidate the related IT professional knowledge to let you have a good preparation for your first time to participate in Fortinet certification NSE8_812 exam.

The NSE8_812 Exam covers a wide range of topics related to network security, including network design and topology, security protocols, VPN technologies, intrusion prevention, and web filtering. Candidates are required to have a deep understanding of these topics in order to pass the exam.

Fortinet NSE 8 - Written Exam (NSE8_812) Sample Questions (Q14-Q19):

NEW QUESTION # 14

An automation stitch was configured using an incoming webhook as the trigger named 'my_incoming_webhook'. The action is configured to execute the CLI Script shown:

- A.
- B.
- C.
- D.

Answer: D

Explanation:

The CLI script in option A will send the log message to the webhook server. The webhook server can then be configured to take any desired action, such as storing the log message in a database or sending an email notification.

The other options are incorrect. Option B will not send the log message to the webhook server because it does not contain the curl command. Option C will send the log message to the webhook server, but it will also include the FortiGate's IP address and MAC address. This information is not necessary, and it could be used by an attacker to identify the FortiGate. Option D will not send the log message to the webhook server because it does not contain the webhook action.

NEW QUESTION # 15

A customer has FortiAP devices in three branch offices managed from a FortiGate in the HQ. Each FortiAP is connected to a dedicated management VLAN.

The customer wants the users connected to the FortiAP SSIDs to use the branch local internet connection, but each branch uses a different VLAN ID for the bridge. HQ users travel to different branches and connect to the same SSID.

Which configuration option will solve this requirement?

- A. Set each FortiAP to a wtp-group and use set vlan-pooling wtp-group on the VAP configuration with the corresponding VLAN ID configuration for each group.
- B. Use set vlan-pooling round-robin on the VAP configuration with the corresponding vlan-pool.
- C. Set a FortiAuthenticator for 802.1x authentication with the Tunnel-Type attribute set to VLAN and use set dynamic-vlan enable on the VAP configuration.
- D. Use set vlan-pooling hash on the VAP configuration with the corresponding vlan-pool.

Answer: C

NEW QUESTION # 16

An administrator discovers that CPU utilization of a FortiGate-200F is high and determines that no traffic is being accelerated by hardware.

Why is no traffic being accelerated by hardware?

- A. check-protocol-header is set to strict in the global config.
- B. strict-dirty-session-check is enabled in global config.
- C. delay-tcp-npu-session is enabled under the firewall policy.
- D. Oper-session-accounting is enabled under np6xlite config.

Answer: A

NEW QUESTION # 17

Refer to the exhibits.

The exhibit shows a FortiGate model device that will be used for zero touch provisioning and a CLI Template.

To facilitate a more efficient roll out of FortiGate devices, you are tasked with using meta fields with the CLI Template to configure the DHCP server on the "office1" FortiGate.

Given this scenario, what would be the output of the config ip-range section on the CLI Template?

- A.
- B.
- C.
- D.

Answer: B

NEW QUESTION # 18

Refer to the exhibit.

You are operating an internal network with multiple OSPF routers on the same LAN segment. FGT_3 needs to be added to the OSPF network and has the configuration shown in the exhibit. FGT_3 is not establishing any OSPF connection. What needs to be changed to the configuration to make sure FGT_3 will establish OSPF neighbors without affecting the DR/BDR election?

- A.
- B.
- C.
- D.

Answer: A

Explanation:

The OSPF configuration shown in the exhibit is using the default priority value of 1 for the interface port1. This means that FGT_3 will participate in the DR/BDR election process with the other OSPF routers on the same LAN segment. However, this is not desirable because FGT_3 is a new device that needs to be added to the OSPF network without affecting the existing DR/BDR election. Therefore, to make sure FGT_3 will establish OSPF neighbors without affecting the DR/BDR election, the priority value of the interface port1 should be changed to 0. This will prevent FGT_3 from becoming a DR or BDR and allow it to form OSPF adjacencies with the current DR and BDR. Option B shows the correct configuration that changes the priority value to 0. Option A is incorrect because it does not change the priority value. Option C is incorrect because it changes the network type to point-to-point, which is not suitable for a LAN segment with multiple OSPF routers. Option D is incorrect because it changes the area ID to 0.0.0.1, which does not match the area ID of the other OSPF routers on the same LAN segment.
