

NCP-MCI-6.10인기자격증덤프자료최신버전덤프

그리고 Itcertkr NCP-MCI-6.10 시험 문제집의 전체 버전을 클라우드 저장소에서 다운로드할 수 있습니다:
https://drive.google.com/open?id=1e_86EKbwWdulk4GS02fUJx5jfVSwhZR-

Itcertkr의 Nutanix인증 NCP-MCI-6.10덤프로 시험공부를 하신다면 고객님의 시간은 물론이고 거금을 들여 학원등록 하지 않아도 되기에 금전상에서도 많은 절약을 해드리게 됩니다. Nutanix인증 NCP-MCI-6.10덤프 구매의향이 있으시면 무료샘플을 우선 체험해보세요.

Nutanix NCP-MCI-6.10 시험요강:

주제	소개
주제 1	<ul style="list-style-type: none">• Manage Clusters within a Nutanix Multicloud Environment: This section of the exam measures the skills of Infrastructure Engineers and Systems Administrators and covers the administration of Nutanix clusters. Storage management includes creating, reading, updating, and deleting storage containers and volume groups. Configuring AOS and Prism Central settings involves authentication, SSL certificate management, IAM role-based access control, and configuring network segmentation. Network administration procedures focus on creating VLAN-backed subnets, virtual switches, and load-balancing policies while monitoring NIC usage. Lifecycle management includes performing hardware and software updates and maintaining firmware. Hardware maintenance involves adding or removing nodes and physical disks while ensuring proper upgrades and replacements. Intelligent operations require configuring capacity policies, discovering application relationships, and simulating scenarios to optimize performance.

주제 2	<ul style="list-style-type: none"> • Configure Disaster Recovery and Data Protection within a Nutanix Multicloud Environment: This section of the exam measures the skills of Disaster Recovery Specialists and Cloud Engineers and covers configuring protection policies and domains for data security and recovery. Candidates need to identify the right entities for protection, schedule backups, define retention policies, and set up replication to remote sites. Recovery plans must be configured and executed with proper scripting, network mapping, and failover strategies. Metro replication requires understanding failover methodologies, comparing solutions on different hypervisors, and preventing split-brain scenarios. Effective disaster recovery planning ensures minimal downtime and data integrity across environments.
주제 3	<ul style="list-style-type: none"> • Troubleshoot a Nutanix Multicloud Environment: This section of the exam measures the skills of Technical Support Engineers and IT Operations Specialists and covers diagnosing and resolving common issues within a Nutanix multi-cloud environment. Troubleshooting protection policies and recovery plans requires identifying network mapping failures, vNIC issues, script execution problems, and connectivity failures. Metro replication troubleshooting involves addressing naming conventions, network limitations, and replication states. Security issues in AOS and Prism Central must be resolved by managing CVM communications, security warnings, and log analysis. LCM operations require diagnosing failures in inventory updates and version upgrades. Performance troubleshooting involves analyzing logs, reading performance charts, and adjusting VM configurations to meet performance needs.
주제 4	<ul style="list-style-type: none"> • Conduct Custom Monitoring within a Nutanix Multicloud Environment: This section of the exam measures the skills of Cloud Analysts and Systems Engineers and covers custom monitoring for optimized performance management. Candidates must analyze performance charts, set retention policies, create custom service level agreements (SLAs), and manage storage based on policies. Creating reports involves identifying the required type, selecting generation frequency, determining retention properties, and customizing report formats for different monitoring needs. Effective monitoring ensures better resource utilization, system efficiency, and proactive issue resolution within the multi-cloud environment.
주제 5	<ul style="list-style-type: none"> • Manage VMs within a Nutanix Multicloud Environment: This section of the exam measures the skills of Cloud Administrators and Virtualization Engineers and covers managing virtual machines (VMs) within a Nutanix multicloud environment. It includes creating and updating VMs by determining hardware requirements, boot modes, sizing, and configuration based on application needs. Candidates must understand how to deploy VMs using templates, snapshots, and image configurations, ensuring the correct formats for importing and exporting VMs. Migration processes require knowledge of prerequisites, storage, network settings, and software compatibility. Additionally, configuring VM categories and attributes is essential for proper organization and management within the environment, ensuring alignment with labels, storage policies, and security settings.

최신 NCP-MCI-6.10시험덤프, NCP-MCI-6.10시험자료, 최강 NCP-MCI-6.10 인증시험문제

많은 사이트에서도 무료Nutanix NCP-MCI-6.10덤프데모를 제공합니다. 우리도 마찬가지입니다. 여러분은 그러한 Nutanix NCP-MCI-6.10데모들을 보시고 다시 우리의 덤프와 비교하시면, 우리의 덤프는 다른 사이트덤프와 차원이 다른 덤프임을 아사될 것 입니다. 우리 Itcertkr사이트에서 제공되는Nutanix인증NCP-MCI-6.10시험덤프의 일부분인 데모 즉 문제와 답을 다운받으셔서 체험해보면 우리Itcertkr에 믿음이 갈 것입니다. 왜냐면 우리 Itcertkr에는 베테랑의 전문가들로 이루어진 연구팀이 있습니다, 그들은 지식과 풍부한 경험으로 여러 가지 여러분이Nutanix인증NCP-MCI-6.10시험을 패스할 수 있을 자료 등을 만들었습니다 여러분이Nutanix인증NCP-MCI-6.10시험에 많은 도움이Nutanix NCP-MCI-6.10될 것입니다. Itcertkr 가 제공하는NCP-MCI-6.10테스트버전과 문제집은 모두Nutanix NCP-MCI-6.10인증시험에 대하여 충분한 연구 끝에 만든 것이기에 무조건 한번에Nutanix NCP-MCI-6.10시험을 패스하실 수 있습니다. 때문에Nutanix NCP-MCI-6.10덤프의 인기는 당연히 짱 입니다.

최신 NCM-MCI NCP-MCI-6.10 무료샘플문제 (Q73-Q78):

질문 # 73

An administrator has successfully configuredMetro Availabilityfor aProtection Domain. However, after a few days, anNCC warnings raised:

"Following VMs are accessing data from remote clusters: VM-1 from remote cluster Remote-ML" What is the first action an administrator must take to fix the issue?

- A. Run the command:
ncli pd list metro-avail=true | egrep "Protection Domain Stretch Role" | grep "ACTIVE"
- **B. Migrate the VM to its primary site and set appropriate rules for DRS and affinity.**
- C. Run the command:
ncc health_checks metro_availability_checks data_locality_check --cvm_list=X.X.X.20
- D. Use must-affinity rule to avoid automated VM migration to the standby datastore.

정답: B

설명:

Metro Availability requires that VMs always read data from their primary site to maintain optimal performance and prevent remote data access latency.

* Option C (Migrate the VM to its primary site and set appropriate rules) is correct:

* If a VM fails over to the secondary site but is still running in the primary site, it will read data remotely, causing high latency and performance issues.

* The solution is to migrate the VM back to the primary site and configure DRS rules or host affinity settings to prevent unwanted movement.

* Option A is incorrect:

* The command lists active Metro Availability protection domains but does not resolve the issue.

* Option B is incorrect:

* Must-affinity rules can help, but they should be configured after migrating the VM back to the primary site.

* Option D is incorrect:

* Running NCC health checks will only diagnose the issue, not resolve it.

References:

* Nutanix Bible #Metro Availability and Data Locality

* Nutanix Best Practices #VM Affinity Rules for Metro Availability

* Nutanix KB #Troubleshooting Remote Data Access in Metro Availability

질문 # 74

An administrator needs to create a storage container named TestData with the following conditions:

Replication Factor (RF) = 1 (RF1)

Inline Compression enabled

Deduplication disabled

Maximum storage capacity = 100 GiB

How should the administrator complete this task?

- A. Log into Prism Central and create the storage container.
- **B. Log into Prism Element and create the storage container with an Advertised Capacity of 100 GiB.**
- C. Log into Prism Central and create the storage container with a Reserved Capacity of 100 GiB.
- D. Log into Prism Element and create the storage container.

정답: B

질문 # 75

An administrator is responsible for resource planning and needs to plan for resiliency of a 10-node RF3 cluster. The cluster has 100TB of storage.

How should the administrator plan for capacity in the event of future failures?

- **A. Set Reserve Capacity for Failure to Auto Detect.**
- B. Set Reserve Storage Capacity (%) to 20.
- C. Set Reserve Capacity for Failure to None.
- D. Set Reserve Memory Capacity (%) to 20.

정답: A

설명:

RF3 (Replication Factor 3) clusters require sufficient reserved capacity to tolerate failures without data loss.

- * Option C (Set Reserve Capacity for Failure to Auto Detect) is correct:
- * Auto Detect dynamically calculates the necessary reserved space based on cluster size and RF settings.
- * It ensures that enough storage remains available in case of a node failure.
- * Option A (Set Reserve Storage Capacity to 20%) is incorrect:
- * The required storage reservation depends on the number of nodes and RF level, not a fixed percentage.
- * Option B (Set Reserve Capacity for Failure to None) is incorrect:
- * Without reserved capacity, a node failure could lead to data unavailability.
- * Option D (Set Reserve Memory Capacity to 20%) is incorrect:
- * This setting applies to RAM, not storage resiliency.

References:

- * Nutanix Bible #Understanding Replication Factor (RF) and Failure Planning
- * Nutanix Prism Element Guide #Configuring Reserve Capacity for Cluster Resiliency
- * Nutanix KB #How to Plan Capacity for RF3 Clusters

질문 # 76

Which predefined view in Prism Central's Intelligent Operations should be used to determine which VM is consuming excessive resources and causing performance issues for others?

- A. Overprovisioned VMs List
- **B. Bully VMs List**
- C. Constrained VMs List
- D. Inactive VMs List

정답: B

설명:

The Bully VMs List (Option C) in Prism Central's Intelligent Operations identifies VMs consuming excessive CPU, memory, or storage, which negatively affects other VMs.

- * Option A (Inactive VMs List) is used for identifying unused VMs but does not detect performance issues.
- * Option B (Overprovisioned VMs List) helps identify VMs with excessive allocated resources, but it does not focus on live performance impact.
- * Option D (Constrained VMs List) highlights VMs suffering from resource contention, not those causing it.

References:

- * Nutanix KB #Identifying and Managing Resource-Hogging VMs

질문 # 77

An administrator needs to set up a protection policy in preparation for a Disaster Recovery (DR) test.

What is the first step required to satisfy this task?

- A. Install NGT (Nutanix Guest Tools) on VMs where applications are supported.
- B. Create a point-in-time snapshot of source VMs.
- C. Convert the source cluster to AHV.
- **D. Create an Availability Zone between Production and DR.**

정답: D

설명:

For Nutanix Disaster Recovery (DR) protection policies, the first step is to establish a connection between the Production cluster and the DR site, which is done by creating an Availability Zone (AZ) (Option B).

- * Availability Zones (AZs) define remote sites for replication and are a requirement for configuring protection domains and disaster recovery plans.
- * Option A (Installing NGT) is not necessary for setting up replication but is useful for application-consistent snapshots.
- * Option C (Converting the source cluster to AHV) is not required, as Nutanix supports cross-hypervisor DR between ESXi and AHV.
- * Option D (Creating a point-in-time snapshot) is a later step after setting up the Availability Zone and Protection Policy.
