Such important exam, you also want to attend the exam.

SAP Certified Associate - Positioning SAP Business AI Solutions as part of SAP Business Suite Sample Questions (Q63-Q68):

NEW QUESTION # 63
Drag and drop the elements at the bottom to the architecture layers of the SAP LeanIX meta model.

Answer:

Explanation:
☐

NEW QUESTION # 64
Which SAP solution helps companies ensure compliance with environmental regulations?
Please choose the correct answer.
Response:

- A. SAP EHS
- B. SAP Extended Warehouse Management
- C. SAP Business Warehouse
- D. SAP SuccessFactors

Answer: A

NEW QUESTION # 65
What are the key use cases of SAP AI in manufacturing? Note: There are 3 correct answers to this question.

- A. Automated quality control
- B. Handwritten production reports
- C. AI-driven predictive maintenance
- D. AI-powered production scheduling
- E. Manual equipment failure analysis

Answer: A,C,D

Explanation:
SAP AI provides transformative use cases in manufacturing, leveraging AI to optimize processes and improve efficiency. The correct answers are AI-driven predictive maintenance, automated quality control, and AI- powered production scheduling, as these are explicitly documented as key use cases in SAP's manufacturing solutions.
SAP documentation highlights: "SAP AI in manufacturing supports predictive maintenance, quality control, and production scheduling to enhance operational efficiency and reduce costs." AI-driven predictive maintenance, supported by SAP Digital Manufacturing Cloud, uses "machine learning to predict equipment failures and schedule maintenance proactively," minimizing downtime. Automated quality control leverages AI to "analyze production data in real-time" and "detect defects automatically," ensuring product quality, as seen in SAP S/4HANA Manufacturing. AI-powered production scheduling optimizes "resource allocation and production timelines" by analyzing demand and capacity, supported by solutions like SAP Integrated Business Planning.
The incorrect options-manual equipment failure analysis and handwritten production reports-are not AI- driven. Manual equipment failure analysis contradicts SAP's automation focus, and handwritten production reports are outdated practices replaced by digital solutions. SAP's manufacturing case studies, such as those involving SAP Digital Manufacturing Cloud, confirm the relevance of the selected use cases.

NEW QUESTION # 66
A manufacturing firm wants to use AI to predict machine failures and optimize maintenance schedules. Which SAP solutions should they implement?
There are 3 correct answers to this question.
Response:
SAP Predictive Maintenance

- A. SAP AI Business Services
- B. SAP Conversational AI
- C. SAP Digital Manufacturing Cloud
- D. SAP Blockchain for Business

Answer: A,B,C

NEW QUESTION # 67

(What are some essential value propositions of SAP Business AI? Note: There are 3 correct answers to this question.)

- A. Replacement of human workers with AI agents to reduce cost and human error.
- B. Deployment of Joule, an advanced AI copilot, to help interpret business data and provide intelligent responses to business inquiries
- C. Training of large multi-modal foundation models based on customer-specific business data.
- D. Use of the best technology on the market and strategic partnerships with industry leaders.
- E. Use of extensive business data extracted from areas including Finance, Supply Chain, Procurement, and Human Resources.

Answer: B,D,E

Explanation:
Comprehensive and Detailed Explanation From Exact Extract: The essential value propositions of SAP Business AI emphasize its relevance through grounding in extensive business data across key areas like Finance, Supply Chain, Procurement, and Human Resources, reliability via utilization of leading technology and strategic collaborations with industry leaders, and transformative capabilities with tools like Joule, the advanced AI copilot that interprets business data and delivers intelligent responses to inquiries. These propositions position SAP Business AI as a solution that drives efficiency, innovation, and productivity without aiming to replace human workers but rather to augment them, while avoiding training foundation models directly on customer-specific data to uphold privacy and ethics.
Exact extracts supporting this:
Use of extensive business data: "AI is grounded in business data and embedded into every business function, driving impact... Industry-specific benefits: Drives value across functions like supply chain (agile, resilient, customer-centric), procurement (optimize spend, reduce risk), finance (manage risk, ensure compliance), HR (employee engagement, faster hiring)...".sap.com "With SAP Business AI, we are building the system of intelligence with three core principles: relevant, reliable, and responsible. Relevant SAP's AI...".news.sap.com "SAP Business AI provides reliable, accurate, and secure generative AI that is grounded in customers' business data...".learning.sap.com Deployment of Joule: "AI-powered scenarios: Access to over 230 AI-powered scenarios, expanding to 400 by the end of 2025, with Joule enabling navigational and transactional tasks up to 90% faster.".sap.com "Process procurement data searches 95% faster with Joule... Speed up HR tasks 90% faster with Joule in SAP SuccessFactors... Complete sales tasks 80% faster with Joule in SAP Sales Cloud.".sap.com Use of best technology and partnerships: "SAP Business AI provides reliable, accurate, and secure... we established an AI foundation...".learning.sap.com "Reliable: built on best technology and partnerships...".news.sap.com Other options are incorrect because:
Option B: SAP does not train large multi-modal foundation models on customer-specific data; instead, it grounds AI in business data using techniques like retrieval-augmented generation (RAG) to ensure privacy, as "Customer data is not shared with third-party large language model (LLM) providers for training their models." (from related ethics, but aligned with value props focusing on secure grounding rather than training).
Option E: SAP's propositions focus on augmentation and collaboration, not replacement, as "Solve complex challenges with AI agents that securely collaborate across your entire business... Helps teams get more done faster and more efficiently with AI that understands business processes and data.".sap.com Reference from Positioning SAP Business AI Solutions as part of SAP Business Suite documents or Study Guide: Derived from the official SAP Business AI product page and SAP Learning course "Discovering SAP Business AI," specifically units on articulating the value of SAP Business AI, which highlight relevance (data grounding), reliability (tech and partnerships), and tools like Joule as core propositions for integrating AI into the SAP Business Suite. Additional support from SAP News blogs on unlocking potential with SAP Business AI, aligned with C_BCBAI_2502 certification materials.
