We know the certificate of C_SEC_2405 exam guide is useful and your prospective employer wants to see that you can do the job with strong prove, so our C_SEC_2405 study materials could be your opportunity. Our C_SEC_2405 practice dumps are sensational from the time they are published for the importance of C_SEC_2405 Exam as well as the efficiency of our C_SEC_2405 training engine. And we can help you get success and satisfy your eager for the certificate.

SAP Certified Associate - Security Administrator Sample Questions (Q24-Q29):

NEW QUESTION # 24

Which limitations apply to restricted users in SAP HANA Cloud? Note: There are 3 correct answers to this question.

- A. They only have full SQL access via the SQL console.
- **B. They cannot create objects in the database.**
- C. They cannot connect via ODBC or JDBC.
- **D. They can only create objects in their own database schema.**
- **E. They can only connect to the database using HTTP/HTTPS.**

Answer: B,D,E

NEW QUESTION # 25

Which log types are available in the Administration Console of Cloud Identity Services? Note: There are 2 correct answers to this question.

- A. Troubleshooting logs
- **B. Change logs**
- **C. Usage logs**
- D. Performance logs

Answer: B,C

Explanation:

In the Administration Console of Cloud Identity Services, the following log types are available:

* Change Logs (A): These logs capture all modifications made to configurations, user data, or system settings.

* Usage Logs (D): Usage logs provide details on how the system is being utilized, including user access patterns and system resource usage.

NEW QUESTION # 26

For which of the following can transformation variables be used?

- A. To save data to the output JSON file
- **B. To save data temporarily**
- C. To save data permanently

Answer: B

Explanation:

In SAP Cloud Identity Services, transformation variables are used to save data temporarily during data transformation processes. These variables act as placeholders to store intermediate values, such as user attributes or calculated fields, while processing data between source and target systems in identity provisioning. Temporary storage enables complex transformations, like mapping or reformatting data, without affecting the final output until the transformation is complete. Transformation variables are not used to save data to the output JSON file, as this is handled by the transformation rules' final output configuration.

Similarly, they do not save data permanently, as their scope is limited to the transformation process, and permanent storage would occur in the target system's repository. By using transformation variables for temporary data storage, SAP Cloud Identity Services ensures flexible and efficient data handling, supporting seamless integration and customization of identity data flows while maintaining security and accuracy in provisioning processes.

NEW QUESTION # 27

Where can you find SAP Fiori tiles and target mappings according to segregation of duty?

- A. Assigned Technical Catalogs
- B. Assigned Spaces
- C. Assigned Pages
- **D. Assigned Business Catalogs**

Answer: D

NEW QUESTION # 28

Which archiving objects are relevant for archiving change documents for user master records? Note: There are 2 correct answers to this question.

- **A. US_PASS**
- B. US_PROF
- C. US_AUTH
- **D. US_USER**

Answer: A,D

Explanation:

In SAP systems, archiving change documents for user master records involves specific archiving objects to manage historical data efficiently. The archiving object US_PASS is used to archive changes related to user passwords, such as password resets or updates, which are critical for tracking user account modifications.

Similarly, US_USER is used to archive changes to user master records, including details like user IDs, names, and group assignments, ensuring a comprehensive record of user profile modifications. These objects allow administrators to store historical data securely while freeing up system resources. In contrast, US_AUTH is related to authorization assignments, not user master record changes, and US_PROF deals with profile assignments, which are separate from user master data. By using US_PASS and US_USER, SAP ensures that changes to sensitive user information are preserved for audit and compliance purposes, supporting security governance in large-scale SAP environments. This archiving process helps maintain system performance while retaining essential historical data for regulatory and forensic analysis.

NEW QUESTION # 29

.....

We have always taken care to provide our customers with the very best. So we provide numerous benefits along with our SAP C_SEC_2405 exam study material. We provide our customers with the demo version of the SAP C_SEC_2405 Exam Questions to eradicate any doubts that may be in your mind regarding the validity and accuracy.
