Pass CrowdStrike CCFA-200b Exam – Experts Are Here To Help You

We always adhere to the principle of “mutual development and benefit”, and we believe our CCFA-200b practice materials can give you a timely and effective helping hand whenever you need in the process of learning our CCFA-200b study braindumps. For we have been in this career over ten years and we are good at tracing the changes of the CCFA-200b guide prep in time and update our exam dumps fast and accurately.

CrowdStrike CCFA-200b Exam Syllabus Topics:

Topic	Details
Topic 1	<ul style="list-style-type: none"> Policy Application: This domain encompasses configuring prevention policies for security posture, sensor update policies, RTR audit policies, containment policies with IP exclusions, and managing quarantined files.

Topic 2	<ul style="list-style-type: none"> • Workflows: This domain focuses on configuring automated workflows that execute predefined actions when specific triggers or conditions are met.
Topic 3	<ul style="list-style-type: none"> • Host Management and Setup: This domain addresses filtering and organizing hosts, disabling detections and understanding their effects, managing Reduced Functionality Mode situations, locating inactive sensors and their retention, and utilizing relevant management reports.
Topic 4	<ul style="list-style-type: none"> • Sensor Deployment: This domain focuses on verifying installation prerequisites, applying default policies and best practices, uninstalling sensors, and troubleshooting sensor issues across supported operating systems.

CrowdStrike Certified Falcon Administrator - 2024 Version Sample Questions (Q56-Q61):

NEW QUESTION # 56

Which of the following options is a feature found ONLY with the Sensor-based Machine Learning (ML)?

- A. Adware and Potentially Unwanted Program detection and prevention
- **B. Identification and analysis of unknown executables**
- C. Next-Gen Antivirus (NGAV) protection
- D. Real-time offline protection

Answer: B

Explanation:

According to documentation (documentation/detections/technique/sensor-based-ml-cst0007):

CrowdStrike sensor-based machine learning (ML) identifies and analyzes unknown executables as they run on hosts. This technique is triggered by files and file attributes associated with known malware. This is similar to the [Cloud-based ML] (/support/documentation/detections/technique/cloud-based-ml) technique. Cloud-based ML is informed by global analysis of executables that classifies and identifies malware. The key difference is that it doesn't run on hosts when they're offline.

NEW QUESTION # 57

Which Real Time Response role will allow you to see all analyst session details?

- A. Real Time Response - Active Responder
- **B. Real Time Response - Administrator**
- C. Real Time Response - Read-Only Analyst
- D. None of the Real Time Response roles allows this

Answer: B

Explanation:

The Real Time Response role that will allow you to see all analyst session details is Real Time Response - Administrator. A Real Time Response - Administrator is a role that has full access and control over the Real Time Response feature in Falcon, which allows you to remotely access and investigate hosts in real time. A Real Time Response - Administrator can view all analyst session details, such as session ID, host name, start and end time, commands executed, and output received. A Real Time Response - Administrator can also create, modify, delete, and assign scripts and commands to other analysts.

NEW QUESTION # 58

What are the two automated triggers that cause a Fusion SOAR workflow to run?

- A. Incident and detections triggers
- B. Condition and action triggers
- **C. Event and scheduled triggers**
- D. Event and action triggers

Answer: C

Explanation:

Fusion SOAR workflows run automatically from Event triggers or Scheduled triggers. Event triggers execute when Falcon observes a matching event, such as a detection, incident, audit event, custom IOA detection, or other supported trigger category. Scheduled triggers run at a defined time or recurrence, allowing routine automation such as reporting, searches, or maintenance workflows. Conditions refine when a workflow continues after the trigger, but they are not triggers themselves. Actions are the tasks performed after the workflow starts, such as sending email, assigning detections, containing hosts, or running RTR commands. The CCFA workflow model separates trigger, condition, and action clearly: triggers start workflows, conditions filter logic, and actions perform outcomes.

NEW QUESTION # 59

What default user role can manage API credentials?

- A. Falcon Security Lead
- B. Falcon API Manager
- C. Endpoint Manager
- **D. Falcon Administrator**

Answer: D

Explanation:

The default user role that can manage API credentials is Falcon Administrator . Falcon's role-permission matrix shows "Manage API credentials" enabled for Falcon Administrator and not enabled for the other listed roles. Falcon Administrator is the broad administrative role that can access nearly all console functionality, with the notable exception that Real Time Response still requires dedicated RTR roles. Managing API credentials is a high-risk administrative function because API clients and secrets can be used by integrations, scripts, and external systems to access Falcon APIs according to assigned scopes. Therefore, Falcon restricts this capability to administrative authority rather than operational roles such as Falcon Security Lead or Endpoint Manager. Falcon Security Lead can manage detections, quarantined files, containment, event searches, and credential resets, but it cannot manage users, roles, or API credentials. "Falcon API Manager" is not the default role presented in the official role model. Reference topics: User Management, Default Roles, API Clients and Keys, Role-Based Access Control.

NEW QUESTION # 60

After successfully installing Falcon on a new employee's laptop, you notice that the machine is assigned the default prevention policy instead of the custom prevention policy you created. You verify that the Falcon sensor is functioning properly, and you confirm that the custom policy is enabled and successfully running on more than 1,000 other Falcon hosts.

What is the likely cause of this issue?

- **A. The laptop is not a member of a host group assigned to the custom policy**
- B. Falcon requires a 24- hour waiting period to apply custom policies to newly installed hosts
- C. A prompt to apply the new prevention policy was manually declined
- D. A host-based firewall rule is preventing the custom policy from applying successfully

Answer: A

NEW QUESTION # 61

.....

The TorrentValid is one of the leading platforms that has been offering real and valid CrowdStrike Certified Falcon Administrator - 2024 Version (CCFA-200b) exam practice test questions. These CrowdStrike Certified Falcon Administrator - 2024 Version (CCFA-200b) exam questions are designed and verified by CrowdStrike CCFA-200b subject matter experts. They work closely together and put all their expertise to check the CrowdStrike CCFA-200b exam questions one by one.
