**CS0-002 Reliable Cram Materials 100% Pass | Latest CS0-002 Exams
Torrent: CompTIA Cybersecurity Analyst (CySA+) Certification Exam**

No matter you are a company employee or a student, you will find that our CS0-002 training quiz is priced reasonably to afford. Though the price is quite low but the quality is unparalleled high. We own numerous of loyal clients that constantly bought our CS0-002 Exam Braindumps and recommended them to their friends, classmates or colleagues. Besides, we give discounts to our customers from time to time. Lots of our customers prised our CS0-002 practice guide a value-added product.

CompTIA Cybersecurity Analyst (CySA+) Certification Exam Sample Questions (Q122-Q127):

NEW QUESTION # 122

Which of the following sets of attributes BEST illustrates the characteristics of an insider threat from a security perspective?

- A. Authorized, unintentional, benign
- B. Authorized, intentional, malicious
- C. Unauthorized, unintentional, benign
- D. Unauthorized, intentional, malicious

Answer: B

Explanation:

Explanation/Reference: <https://www.sciencedirect.com/topics/computer-science/insider-attack>

NEW QUESTION # 123

During routine monitoring, a security analyst discovers several suspicious websites that are communicating with a local host. The analyst queries for IP 192.168.50.2 for a 24-hour period:

Time	SRC	DST	Domain	Bytes
6/26/19 10:01	192.168.50.2	138.10.2.5	www.wioapsfeje.co	50
6/26/19 11:05	192.168.50.2	138.10.2.5	www.wioapsfeje.co	1000
6/26/19 13:09	192.168.50.2	138.10.25.5	www.wfaojsjfjoe.co	1000
6/26/19 15:13	192.168.50.2	172.10.25.5	www.wfalksdjflse.co	1000
6/26/19 17:17	192.168.50.2	172.10.45.5	www.wsahlfsdjflfe.co	1000
6/26/19 23:45	192.168.50.2	172.10.3.5	ftp.walksdjgfl.co	50000
6/27/19 10:21	192.168.50.2	175.35.20.5	www.whatsmyip.com	25
6/27/19 11:25	192.168.50.2	175.35.20.5	www.whatsmyip.com	25

To further investigate, the analyst should request PCAP for SRC 192.168.50.2 and _____.

- A. DST 138.10.2.5.
- B. DST 172.10.45.5.
- C. DST 175.35.20.5.
- D. DST 138.10.25.5.
- E. DST 172.10.3.5.

Answer: E

NEW QUESTION # 124

A company's domain has been spoofed in numerous phishing campaigns. An analyst needs to determine the company is a victim of domain spoofing, despite having a DMARC record that should tell mailbox providers to ignore any email that fails DMARC upon review of the record, the analyst finds the following:

```
v=DMARC1; p=none; fo=0; rua=mailto:security@company.com; ruf=mailto:security@company.com; adkim=r; rf=afrr; ri=86400;
```

Which of the following BEST explains the reason why the company's requirements are not being processed correctly by mailbox providers?

- A. The DMARC record's policy tag is incorrectly configured.
- B. The DMARC record's DKIM alignment tag is incorrectly configured.
- C. The DMARC record's version tag is set to DMARC1 instead of the current version, which is DMARC3.

- D. The DMARC record does not have an SPF alignment tag.

Answer: A

Explanation:

The DMARC record's policy tag is incorrectly configured and explains why the company's requirements are not being processed correctly by mailbox providers. The policy tag (p) specifies how mailbox providers should handle messages from the domain that fail DMARC checks. The possible values for the policy tag are none, quarantine, or reject¹. None means that no action is taken on failed messages and only reports are sent. Quarantine means that failed messages are treated as suspicious and may be filtered or marked as spam. Reject means that failed messages are rejected and not delivered. In this case, the company's DMARC record has a policy tag value of none, which means that mailbox providers will not ignore any email that fails DMARC as required by the company. Instead, mailbox providers will deliver all messages from the domain regardless of their DMARC status and only send reports to the company. To fix this issue, the company should change its policy tag value to reject, which means that mailbox providers will reject and ignore any email that fails DMARC as required by the company. The DMARC record's DKIM alignment tag (A) is not incorrectly configured and does not explain why the company's requirements are not being processed correctly by mailbox providers. The DKIM alignment tag (adkim) specifies how strictly mailbox providers should match DKIM identifiers with From domain identifiers². The possible values for DKIM alignment tag are s or r. S means strict alignment, which means that DKIM identifiers must exactly match From domain identifiers. R means relaxed alignment, which means that DKIM identifiers must match From domain identifiers at an organizational level (e.g., subdomain.example.com and example.com are considered aligned). In this case, the company's DMARC record has a DKIM alignment tag value of r, which means that mailbox providers will use relaxed alignment for DKIM verification.

NEW QUESTION # 125

An organization discovers motherboards within the environment that appear to have been physically altered during the manufacturing process. Which of the following is the BEST course of action to mitigate the risk of this reoccurring?

- A. Perform an assessment of the firmware to determine any malicious modifications.
- B. Conduct a trade study to determine if the additional risk constitutes further action.
- C. Work with IT to replace the devices with the known-altered motherboards.
- **D. Coordinate a supply chain assessment to ensure hardware authenticity.**

Answer: D

Explanation:

A supply chain assessment is a process that evaluates the security and integrity of the suppliers and vendors that provide hardware or software to an organization. It can help identify and mitigate the risk of tampered or counterfeit products that could compromise the organization's security or performance. Coordinating a supply chain assessment to ensure hardware authenticity is the best course of action to mitigate the risk of motherboards that have been physically altered during the manufacturing process. Performing an assessment of the firmware, conducting a trade study, or working with IT to replace the devices are other possible actions, but they are not as effective or proactive as coordinating a supply chain assessment. NEW QUESTION # 126

A security analyst reviews SIEM logs and detects a well-known malicious executable running in a Windows machine. The up-to-date antivirus cannot detect the malicious executable. Which of the following is the MOST likely cause of this issue?

- A. The malware detects and prevents its own execution in a virtual environment.
- B. The malware is fileless and exists only in physical memory.
- **C. The malware is being executed with administrative privileges.**
- D. The antivirus does not have the malware's signature.

Answer: C

NEW QUESTION # 127

.....

If you are still unsure whether to pursue BraindumpsIT CompTIA CS0-002 exam questions for CS0-002 certification exam preparation, you are losing the game at the first stage in a fiercely competitive marketplace. BraindumpsIT CompTIA CS0-002

Questions are the best option for becoming CS0-002 certified.

CS0-002 Exams Torrent: https://www.braindumpsit.com/CS0-002_real-exam.html

CompTIA CS0-002 Reliable Cram Materials Now, you only need to find the "download for free" item in our website, and you will notice that there are three kinds of versions for you to choose, Our CS0-002 preparation exam is consisted of a team of professional experts and technical staff, which means that you can trust our security system with whole-heart, CompTIA CS0-002 Reliable Cram Materials Having a certificate may be something you have always dreamed of, because it can prove that you have a certain capacity.

Stream Manipulations: Mapping Employees to CS0-002 Unique Last Name Strings, Second, it means you've done the same, Now, you only need to find the "download for free" item in our website, CS0-002 Reliable Cram Materials and you will notice that there are three kinds of versions for you to choose.
