If you are talking about the Google Chrome-Enterprise-Administrator certification exam, you need to practice and overcome mistakes. If you do not practice for it, chances are that you might get confused while appearing for the Chrome-Enterprise-Administrator Exam. When you get the test study material, it comes with the Google Chrome-Enterprise-Administrator practice exams (desktop & web-based) to solve.

Google Professional Chrome Enterprise Administrator Certification Exam Sample Questions (Q14-Q19):

NEW QUESTION # 14
An external entity is conducting a penetration test on an organization's Chrome Browser environment They report that a significant number of Manifest V2 (MV2) extensions are installed none of which are critical to business operations IT leadership has requested either block or upgrade How should an administrator proceed?

- A. Auto-upgrade the extensions from MV2 to MV3
- B. Collect the extension IDs and configure an installation policy of block
- C. Configure the Manifest V2 availability policy
- D. Configure the installation mode to reflect removed for each extension ID

Answer: C

Explanation:
Given that the MV2 extensions are not critical, and the requirement is to either block or upgrade, the most direct and efficient approach is to configure the "Manifest V2 availability" policy. This policy allows administrators to control the usage of Manifest V2 extensions, including blocking them entirely or allowing them until a specified date. Option A involves manually collecting and blocking each extension, which is less efficient. Option C ("removed") is not a standard installation mode policy. Option D is not a policy that an administrator can directly configure; the upgrade to MV3 is a developer-driven process.

NEW QUESTION # 15

An administrator decides to shorten the default time that a browser may be inactive before automatic deletion from the Google Admin console What policy must be selected for the Device Token Management policy to allow devices to re-enroll in the Google Admin console?

- A. Revoke Token
- B. Delete Token
- C. Renew Token
- D. Invalidate Token

Answer: C

Explanation:
When managing inactive device tokens, the "Renew Token" option is crucial for allowing devices to re-enroll after a period of inactivity. If the token is revoked, invalidated, or deleted, the device will likely require a manual re-enrollment process. Renewing the token provides a mechanism for the device to check back in and remain managed.

NEW QUESTION # 16

An administrator decides to shorten the default time that a browser may be inactive before automatic deletion from the Google Admin console What policy must be selected for the Device Token Management policy to allow devices to re-enroll in the Google Admin console?

- A. Revoke Token
- B. Delete Token
- C. Renew Token
- D. Invalidate Token

Answer: C

Explanation:
When managing inactive device tokens, the "Renew Token" option is crucial for allowing devices to re-enroll after a period of inactivity. If the token is revoked, invalidated, or deleted, the device will likely require a manual re-enrollment process. Renewing the token provides a mechanism for the device to check back in and remain managed.

NEW QUESTION # 17

The security team has a request to approve two extensions with similar functionality. They only want to approve one extension for use in the environment to avoid redundancy What is an objective measurement that the security team can use to help determine which extension may be safer to use?

- A. 3rd Party Risk Score
- B. Permission Count
- C. Chrome Web Store Ratings
- D. Chrome Manifest Version

Answer: A

Explanation:
A "3rd Party Risk Score" provides an objective assessment of the extension's security and privacy risks, often based on automated analysis of its code, requested permissions, developer reputation, and other factors. This is a more data-driven approach to

evaluating safety compared to simply counting permissions (which doesn't account for the sensitivity of each permission), the Manifest version (which indicates features but not necessarily safety), or Chrome Web Store ratings (which are subjective and can be manipulated).

NEW QUESTION # 18
A Chrome administrator is using both Cloud policies and Local policies to apply settings to Chrome browsers The administrator wants to ensure that on Windows computers, the Cloud policies will have precedence if Cloud and Local policies conflict What Registry value can be created under HKEY_LOCAL_MACHINE\SOFTWARE\Policies\Google\Chrome to achieve this?

- A. "Value: CloudPolicyOverridesPlatformPolicy Type REG_DWORD Data 1"
- B. "Value: LocalPolicyOverride Type: REG_DWORD Data 0"
- C. "Value: PolicyOverridePreference Type REG_SZ Data Cloud"
- D. "Value PolicySupercedence Type REG_SZ Data Cloud"

Answer: A

Explanation:
To ensure cloud policies override local policies on Windows, the administrator needs to create a specific Registry value. The correct value is `"CloudPolicyOverridesPlatformPolicy"` of type `REG_DWORD` with data `1`. This setting explicitly tells the Chrome browser to prioritize cloud-managed policies over local policies.

NEW QUESTION # 19
