CAS-004 Practice Test Online | CAS-004 Dump File

If you want to get promotions or high-paying jobs in the CompTIA sector, then it is important for you to crack the CompTIA Advanced Security Practitioner (CASP+) Exam (CAS-004) certification exam. The CompTIA CAS-004 certification has become the best way to validate your skills and accelerate your tech career. CAS-004 Exam applicants who are doing jobs or busy with their other matters usually don't have enough time to study for the test.

CompTIA Advanced Security Practitioner (CASP+) Exam Sample Questions (Q387-Q392):

NEW QUESTION # 387
Which of the following technologies should the company deploy to meet its security objectives? (Select TWO)_

- A. Reverse proxy
- B. NIDS

- C. NAC
- D. WAF
- E. NGFW
- F. Bastion host

Answer: B,C

NEW QUESTION # 388
A security analyst wants to keep track of alt outbound web connections from workstations. The analyst's company uses an on-premises web filtering solution that forwards the outbound traffic to a perimeter firewall.
When the security analyst gets the connection events from the firewall, the source IP of the outbound web traffic is the translated IP of the web filtering solution. Considering this scenario involving source NAT.
which of the following would be the BEST option to inject in the HTTP header to include the real source IP from workstations?

- A. X-Forwarded-For
- B. Strict-Transport-Security
- C. Cache-Control
- D. X-Forwarded-Proto
- E. Content-Security-Policy

Answer: A

NEW QUESTION # 389
A company suspects a web server may have been infiltrated by a rival corporation. The security engineer reviews the web server logs and finds the following:
The security engineer looks at the code with a developer, and they determine the log entry is created when the following line is run:
Which of the following is an appropriate security control the company should implement?

- A. Restrict directory permission to read-only access.
- B. Separate the items in the system call to prevent command injection.
- C. Parameterize a query in the path variable to prevent SQL injection.
- D. Use server-side processing to avoid XSS vulnerabilities in path input.

Answer: B

Explanation:
The company using the wrong port is the most likely root cause of why secure LDAP is not working. Secure LDAP is a protocol that provides secure communication between clients and servers using LDAP (Lightweight Directory Access Protocol), which is a protocol that allows querying and modifying directory services over TCP/IP. Secure LDAP uses SSL (Secure Sockets Layer) or TLS (Transport Layer Security) to encrypt LDAP traffic and prevent unauthorized disclosure or interception.

NEW QUESTION # 390
During a network defense engagement, a red team is able to edit the following registry key:
Which of the following tools is the red team using to perform this action?

- A. SCAP scanner
- B. PowerShell
- C. Network vulnerability scanner
- D. Fuzzer

Answer: B

Explanation:
PowerShell is a versatile scripting language that can be used to automate administrative tasks and configurations on Windows machines. It has the capability to edit registry keys, which is what the red team appears to have done based on the provided information. PowerShell is a common tool used by both system administrators and attackers (in the form of a red team during penetration testing).

NEW QUESTION # 391

An organization's assessment of a third-party, non-critical vendor reveals that the vendor does not have cybersecurity insurance and IT staff turnover is high. The organization uses the vendor to move customer office equipment from one service location to another. The vendor acquires customer data and access to the business via an API.

Given this information, which of the following is a noted risk?

- A. The possibility of the vendor's business ceasing operations
- B. Financial liability from a vendor data breach
- C. Feature delay due to extended software development cycles
- D. Technical impact to the API configuration

Answer: C

NEW QUESTION # 392

......
