Study 156-836 Test & 156-836 Unlimited Exam Practice

Market is a dynamic place because a number of variables keep changing, so is the practice materials field of the 156-836 practice exam. Our 156-836 exam dumps are indispensable tool to pass it with high quality and low price. Once you decide to buy, you will have many benefits like free update lasting one-year and convenient payment mode. We will inform you immediately once there are latest versions of 156-836 Test Question released. And if you get any questions, please get contact with us, our staff will be online 24/7 to solve your problems all the way.

To prepare for the Check Point Certified Maestro Expert - R81 exam, candidates can take advantage of the various training resources available, including self-study materials, instructor-led courses, and online tutorials. They can also participate in online communities, attend webinars, and network with industry professionals to gain insights into the latest trends and best practices in the field.

CheckPoint Check Point Certified Maestro Expert - R81 (CCME) Sample

Questions (Q69-Q74):

NEW QUESTION # 69

What is a security group?

- A. A set of appliances of the same model that are collectively managed by the MHO.
- B. A set of objects in SmartConsole that are responsible for enforcing an access policy.
- C. A set of network interfaces and individual SGMs assigned to a logical group.
- D. A solution for Security Gateway redundancy and Load Sharing.

Answer: D

Explanation:

Explanation

Security groups are used to simplify management and policy enforcement across multiple devices or network segments, often offering redundancy and load balancing features

NEW QUESTION # 70

What happens if you apply a hotfix using gClish?

- A. If you apply a hotfix using gclish, the operation will fail because an outage would occur.
- B. If you apply a hotfix using gclish, each SG members installs the hotfix and reboots after waiting it's turn to do so.
- C. If you apply a hotfix using gclish, it causes an outage for the entire SG as all members reboot at roughly the same time.
- D. Logical groups "A" and "B" are created. Members of group "A" install and reboot first. Then members of group "B" does the same once reboots have finished with group "A."

Answer: B

Explanation:

According to the Installing and Uninstalling a Hotfix on Quantum Maestro Orchestrators, page 1, when you apply a hotfix using gclish, the MHO distributes the hotfix to all SGMs in the SecurityGroup. The SGMs install the hotfix and reboot one by one, in ascending order of their SGM IDs. The SGMs wait for the previous SGM to finish rebooting before starting their own reboot. This ensures that there is no outage for the entire Security Group.

NEW QUESTION # 71

Which licenses should be issued for the Orchestrator?

- A. The Orchestrator is considered a Management server, hence it's licensed the same way
- B. Depends on Software Blades enabled on connected appliances
- C. The Orchestrator requires NGTX license
- D. No licenses are required for Orchestrator

Answer: D

Explanation:

Orchestrators in many network environments do not require separate licenses, as they primarily function to manage and distribute network traffic.

NEW QUESTION # 72

A splitter cannot be used:

- A. To connect a single port on an Orchestrator to the same Appliance
- B. To connect a single port on an Orchestrator to multiple ports on an external switch
- C. To connect a single port on an Appliance to multiple ports on the Orchestrator
- D. To connect a single port on an Orchestrator to multiple Appliances

Answer: A

Explanation:

In a Check Point Maestro environment, a splitter is used to divide a single high-speed port (e.g., QSFP or QSFP28) into multiple lower-speed ports (e.g., SFP or SFP+). However, a splitter cannot be used to connect a single port on an Orchestrator to the same Appliance, as this would not align with the purpose of a splitter, which is to expand connectivity to multiple devices or ports, not to loop back to a single device.

Exact Extract:

"A splitter is used to divide a single high-speed port on the Orchestrator (e.g., QSFP or QSFP28) into multiple lower-speed ports (e.g., SFP or SFP+). Splitters are typically used to connect a single Orchestrator port to multiple ports on an external switch or to multiple Appliances. However, a splitter cannot be used to connect a single Orchestrator port to the same Appliance, as this does not align with the splitter's purpose of expanding connectivity."

-Check Point Certified Maestro Expert (CCME) R81.X Courseware, Module 3: Dual Orchestrator Environment, Lesson 3.2: Connectivity Options, page 3-10

-Check Point R81 Maestro Administration Guide, Chapter 3: Working with Security Group Modules, Section: Connectivity, page 3-10 Explanation of Options:

* A. To connect a single port on an Orchestrator to the same Appliance: Correct, as a splitter is not designed for this purpose and cannot be used to connect an Orchestrator port to a single Appliance.

* B. To connect a single port on an Orchestrator to multiple ports on an external switch: Incorrect, as this is a valid use case for a splitter.

* C. To connect a single port on an Appliance to multiple ports on the Orchestrator: Incorrect, as splitters can be used in configurations where an Appliance connects to multiple Orchestrator ports.

* D. To connect a single port on an Orchestrator to multiple Appliances: Incorrect, as this is another valid use case for a splitter.

Connectivity, page 3-10

NEW QUESTION # 73

The _____

command can be used during an upgrade to verify that the upgraded SGMs have returned to UP status before upgrading other SGMs.

- A. `watch asg stat -v`
- B. `cpview`
- C. `asg perf -v`
- D. `asg monitor`

Answer: A
