権威のある dbt-Analytics-Engineering試験過去問一回合格-実地的な dbt-Analytics-Engineering ブロンズ教材

GoShiken当社の専門家は、dbt Labs dbt-Analytics-Engineeringの試験概要に従って教科書を書き直し、すべての重要な問題を収集し、重要なメモを作成して、集中的にレビューできるようにしました。専門家は、例、図、その他の方法を通じて、すべての不可解な知識ポイントの信頼できる解釈も実施しました。dbt-Analytics-Engineering学習教材で使用される表現は非常に理解しやすいです。業界の新人であっても、専門知識を非常に簡単に理解できます。dbt-Analytics-Engineeringトレーニングトレント: dbt Analytics Engineering Certification Examは、準備に最適な学習ガイドです。

dbt Labs dbt Analytics Engineering Certification Exam 認定 dbt-Analytics-Engineering 試験問題 (Q173-Q178):

質問 # 173

Given this dbt_project.yml:

```
name: "jaffle_shop"
version: "1.0.0"
config-version: 2
profile: "snowflake"
model-paths: ["models"]
macro-paths: ["macros"]
snapshot-paths: ["snapshots"]
target-path: "target"
clean-targets:
- "logs"
- "target"
- "dbt_modules"
- "dbt_packages"
models:
jaffle-shop:
+materialized: table
```

...and this warning when compiling your project:

```
[WARNING]: Configuration paths exist in your dbt_project.yml file which do not apply to any resources.
```

There are 1 unused configuration paths:

```
- models.jaffle-shop
```

What is the root cause?

A run hook in the jaffle_shop project was defined with an incorrect regular expression.

- A. No
- B. Yes

正解: A

解説:

The true root cause is not related to run hooks or regular expressions. The warning clearly indicates that dbt found a configuration path that does not match any actual model path inside the project. In this case, the config block uses the key `models.jaffle-shop`, which is incorrect because dbt model paths must match the folder structure and cannot contain hyphens unless the folder itself contains a hyphen. Since the project folder is named `jaffle_shop` (with an underscore), dbt cannot map the configuration to any model.

dbt evaluates configuration paths based on directory names under the `models/` folder. A mismatch between the folder name and the configuration key causes dbt to ignore the configuration entirely. This results in the warning:

```
"Configuration paths exist in your dbt_project.yml file which do not apply to any resources." This warning is specifically triggered when dbt identifies unused configuration paths due to typos, incorrect nesting, or invalid identifiers. dbt does not interpret hyphens (-) as valid Python identifiers for resource names, so a config path like models.jaffle-shop will never be applied.
```

Therefore, the assertion that the cause is a "run hook with an incorrect regular expression" is incorrect. The actual root cause is that the configuration path uses the wrong name (`jaffle-shop` instead of `jaffle_shop`).

質問 # 174

dbt Model Snippet:SQL

- A. The literal use of 'analytics' as the `target_database`.
- B. The Jinja conditional logic used for incremental logic.
- C. The `source()` function referencing data from the 'analytics' schema.
- D. The nested subquery to calculate `MAX(created_at)`.

正解: D

解説:

Subqueries can be performance bottlenecks- The other parts, while potentially optimizable, are less likely to cause a dramatic slowdown.

質問 # 175

(Multiple Select)

- A. Environment variables used for sensitive credentials are not set correctly in production.
- B. Your development profile in dbt_project.yml has incorrect connection details.
- C. Your production database has stricter data type constraints than development.
- D. You have accidentally granted write permissions to the production data source during testing.

正解: A、C

解説:

Explanation: A could reveal issues only present when interacting with the real production data. C is a common source of environment-specific errors. B would likely cause errors everywhere. D is a serious issue, but wouldn't cause a regular dbt run to fail differently.

質問 # 176

You introduce a new test, which unexpectedly leads to many models previously deemed 'successful' now failing. What should your initial troubleshooting steps include?

- A. Verify the test logic doesn't contain errors.
- B. Check if the test is revealing previously overlooked data quality problems.
- C. Review the test's severity configuration (warning vs _error).
- D. Temporarily raise the test's failure threshold to give you time to investigate.

正解: A、B、C

解説:

The focus is to determine if the issue is with the test itself, the data, or how the test is interpreted within your workflow. D is a last resort that risks masking real issues.

質問 # 177

A team member suggests building a dbt package for a set of reusable transformations your team frequently uses. When is this MOST likely a good idea?

- A. You need to limit access to these transformations to a specific team within your organization.
- B. The transformations are relatively simple and could be written as macros.
- C. The transformations are project-specific but used across multiple models.
- D. The transformations are complex and involve domain-specific logic that might be beneficial to others.

正解: D

解説:

Sharing common, complex logic is a key reason for creating packages. Simple logic is better as macros. Project-specificity favors macros or CTEs. Packages aren't ideal for access control.

質問 # 178
