100% Pass Quiz Huawei - Useful H12-821_V1.0 - Reliable HCIP-Datacom-Core Technology V1.0 Exam Pdf

Exam4PDF's braindumps provide you the gist of the entire syllabus in a specific set of questions and answers. These study questions are most likely to appear in the actual exam. The Certification exams are actually set randomly from the database of H12-821_V1.0. Thus most of the questions are repeated in H12-821_V1.0 Exam and our experts after studying the previous exam have sorted out the most important questions and prepared dumps out of them. Hence Exam4PDF's dumps are a special feast for all the exam takers and sure to bring them not only exam success but also maximum score.

To prepare for the Huawei H12-821_V1.0 certification exam, candidates should have a solid understanding of networking fundamentals and experience working with data communication technologies. They can also take advantage of Huawei's training and certification resources, which include online courses, study guides, and practice exams. With the right preparation and dedication, candidates can successfully pass the Huawei H12-821_V1.0 certification exam and take their careers to the next level.

Huawei H12-821_V1.0 (HCIP-Datacom-Core Technology V1.0) exam is a certification exam offered by Huawei to test the knowledge and skills of IT professionals in the field of data communication core technology. H12-821_V1.0 exam is designed for individuals who have experience in the planning, design, implementation, and maintenance of data communication networks.

Huawei HCIP-Datacom-Core Technology V1.0 Sample Questions (Q713-Q718):

NEW QUESTION # 713
Regarding the command description of OSP, which is wrong? (Multiple choice)

- A. The stub router command is used to configure the secondary router as a Stub router, and the stub router can form a neighbor relationship with a non- stub router
- B. There is no need to use router-id in OSPF v3 configuration, the configuration method is the same as OSPF v2
- C. The no-summary parameter is configured for the stub area and the totally stub area
- D. The difference between OSPF v2 and OSPF V3 interface configuration commands is that OSPF v2 can use the network command, while OSPF v3 can be directly enabled on the interface

Answer: A,B,C

NEW QUESTION # 714
On an RSTP network, port priorities may be compared during root port or designated port election. Which of the following values is the default priority of a port on a Huawei switch?

- A. 0
- B. 1
- C. 2
- D. 3

Answer: C

Explanation:
Comprehensive and Detailed Step-by-Step Explanation:
1. Port Priority in RSTP:
RSTP (Rapid Spanning Tree Protocol) elects root and designated ports based on port priority and port ID.
Port priority is a configurable value that helps determine which port becomes the root or designated port when multiple ports are eligible.
The port ID consists of the port priority and port number. When priorities are equal, the port number is used as a tiebreaker.
2. Default Port Priority on Huawei Switches:
On Huawei switches, the default port priority is 128.
This value can be adjusted in increments of 16 using the command stp port priority.
3. Analysis of Options:
Option A: 1
Incorrect. This is not the default port priority value.
Option B: 128
Correct. This is the default port priority value on Huawei switches.
Option C: 4096
Incorrect. This is not a valid default port priority value.
Option D: 32768
Incorrect. This is the default bridge priority, not the port priority.
4. Summary:
The default port priority on Huawei switches is 128.
Huawei HCIA-Datacom Study Guide, Chapter "RSTP Port Role Election."
IEEE 802.1D-2004: Rapid Spanning Tree Protocol (RSTP).

NEW QUESTION # 715
Which of the following statements regarding DR/BDR are false?

- A. All DR others establish neighbor relationships with DR and BDR only.

- B. DR others listen on the multicast address 224.0.0.5.
- C. In a broadcast network, DR and BDR must be elected. A broadcast network without a DR or BDR cannot operate normally.
- D. DR others listen on the network address 224.0.0.6.

Answer: D

Explanation:
In OSPF, DR and BDR listen on the multicast address 224.0.0.6, while all OSPF routers (including DR others) listen on 224.0.0.5. DR others establish neighbor relationships with DR and BDR, but they do not listen on 224.0.0.6.

NEW QUESTION # 716
In OSPF, ABR does not flood Type 5 LSA and Type 4 LSA into the Stub area. It advertises a default LSA to the Stub area and guides the data packet on how to reach the destination outside the AS.

- A. FALSE
- B. TRUE

Answer: B

NEW QUESTION # 717
When the BFD detection intervals at both ends are 30ms and 40ms respectively, which of the following option descriptions is correct?

- A. The bfd session can be established, take 40ms after negotiation
- B. The bfd session cannot be established
- C. The bfd session can be established, and each can be sent at intervals according to its own time
- D. The bfd can be established, take 30ms after negotiation

Answer: A
