

Free PDF Quiz SAP - C-S4CPB-2602 - SAP Certified - Implementation Consultant - SAP S/4HANA Cloud Public Edition (C_S4CPB_2602)–Trustable Free Braindumps

It is known to us that our C-S4CPB-2602 study materials have been keeping a high pass rate all the time. There is no doubt that it must be due to the high quality of our study materials. It is a matter of common sense that pass rate is the most important standard to testify the C-S4CPB-2602 Study Materials. The high pass rate of our study materials means that our products are very effective and useful for all people to pass their exam and get the related certification.

With our SAP C-S4CPB-2602 exam questions material, we promise your success in SAP certification. We guarantee that if you study completely from our practice SAP C-S4CPB-2602 exams, you will pass your SAP C-S4CPB-2602 exam with flying colors on the first try. If you are pressed for time when studying for the SAP Certified - Implementation Consultant - SAP S/4HANA Cloud Public Edition (C_S4CPB_2602) PDF Questions and working several jobs, PDF format is the ideal option. Because the BraindumpsPrep follows every bit of the official SAP Certified - Implementation Consultant - SAP S/4HANA Cloud Public Edition (C_S4CPB_2602) exam syllabus to compile the most relevant SAP Exam Questions and answers with a 100% chance of appearing in the actual SAP Certified - Implementation Consultant - SAP S/4HANA Cloud Public Edition (C_S4CPB_2602) exam. The SAP C-S4CPB-2602 PDF file does not require any installation and is equally suitable for PCs, mobile devices, and tablets. Using a smartphone, you may go through the SAP C-S4CPB-2602 exam questions whenever and wherever you desire. The C-S4CPB-2602 PDF files are also printable for making handy notes.

>> Free C-S4CPB-2602 Braindumps <<

New C-S4CPB-2602 Braindumps Ebook, Valid C-S4CPB-2602 Test Prep

BraindumpsPrep recognizes the acute stress the aspirants undergo to get trustworthy and authentic SAP Certified - Implementation Consultant - SAP S/4HANA Cloud Public Edition (C_S4CPB_2602) (C-S4CPB-2602) exam study material. They carry undue pressure with the very mention of appearing in the SAP C-S4CPB-2602 certification test. Here the BraindumpsPrep come forward to prevent them from stressful experiences by providing excellent and top-rated SAP Certified - Implementation Consultant - SAP S/4HANA Cloud Public Edition (C_S4CPB_2602) (C-S4CPB-2602) practice test questions to help them hold the SAP Certified

- Implementation Consultant - SAP S/4HANA Cloud Public Edition (C_S4CPB_2602) (C-S4CPB-2602) certificate with pride and honor.

SAP Certified - Implementation Consultant - SAP S/4HANA Cloud Public Edition (C_S4CPB_2602) Sample Questions (Q18-Q23):

NEW QUESTION # 18

SIMULATION

Migrate Bank Data

Business Scenario

You are responsible for migrating bank data into the SAP S/4HANA Cloud Public Edition system. You have determined the best method is Migrate Data Using Staging Tables, as you only have a couple banks to migrate.

Prerequisites:

Note:

In the task below, always replace ##### with the last 6 digits of your group number.

Note:

Make sure to use the EXACT names/values/spaces as they are listed in the task. Even forgetting a space or a number will cause the validation of the task to fail and be marked as incorrect.

Task:

Check the documentation for the Bank migration object and assign the additional business role required to ensure you can migrate bank data into the system.

Answer:

Explanation:

See Explanation below for all solution

Explanation:

Objective

The purpose of this task is to check the Bank migration object documentation and assign the additional business role needed so you can successfully migrate bank data into SAP S/4HANA Cloud Public Edition.

The additional business role required is:

Business Role Template: SAP_BR_MD_SPECIALIST_BNK

Business Role Description: Master Data Specialist - Bank Data

SAP documents that the app Manage Banks - Master Data is assigned to the business role Master Data Specialist - Bank Data (SAP_BR_MD_SPECIALIST_BNK) in business catalog Bank - Maintenance (SAP_CA_BC_BNK_PC). That is the role needed for bank master data maintenance and is the missing authorization when the migration cockpit can load data but cannot create banks in the target system.

Business Scenario Explanation

In the previous migration steps, you already assigned the role:

Configuration Expert - Data Migration

BR_CONFIG_EXPERT_DATA_MIG

That role gives access to the migration cockpit itself, meaning you can:

create migration projects,

select migration objects,

upload CSV files,

validate data,

transfer data to staging tables,

and execute migration runs.

However, for the Bank migration object, SAP also requires the authorization to create bank master data in the target system. If that authorization is missing, the migration can still reach the execution stage, but then fail with an authorization message such as:

You are not authorized to create bank data for country/region US

That is why the additional role Master Data Specialist - Bank Data (SAP_BR_MD_SPECIALIST_BNK) must be assigned.

Important Notes

Always replace ##### with the last 6 digits of your group number in later migration steps.

The role to add here is in addition to the migration cockpit role.

Save the user after assigning the role.

Refresh the session after assignment so the new authorization is loaded.

Required Additional Role

Step 1: Review the migration object documentation

Open the Bank migration object in the migration project and review the documentation or role requirement note.

Explanation:

The task explicitly asks you to check the documentation for the Bank migration object and assign the additional role required for migration. SAP's official documentation for bank maintenance shows that bank master maintenance is tied to the role Master Data Specialist - Bank Data (SAP_BR_MD_SPECIALIST_BNK).

Step 2: Open the app "Maintain Business Users"

From the SAP S/4HANA Cloud launchpad:

Log in to SAP S/4HANA Cloud.

Search for:

Maintain Business Users

Open the app.

Explanation:

This app is used to assign business roles to your user.

Step 3: Search for your own user

In Maintain Business Users:

Enter your own user ID in the search field.

Click Go.

Explanation:

You must assign the additional role to your own user because you are the one executing the migration.

Step 4: Open your user record

From the search results:

Click your user entry.

Open the business user detail page.

Explanation:

This opens the maintenance screen where assigned business roles can be changed.

Step 5: Switch to Edit mode

On the user detail page:

Click Edit

Explanation:

Edit mode is required before the assigned business roles list can be updated.

Step 6: Open the "Assigned Business Roles" tab

Inside the business user record:

Click:

Assigned Business Roles

Explanation:

This is where you assign the additional bank master data role.

Step 7: Click Add

In the assigned business roles section:

Click Add

This opens the popup:

Add Business Roles

Explanation:

This popup is used to search for standard SAP business roles.

Step 8: Search for the additional bank role

In the Add Business Roles popup, search for either:

SAP_BR_MD_SPECIALIST_BNK

or

Master Data Specialist - Bank Data

Then select the matching role.

Explanation:

SAP documents that the app Manage Banks - Master Data belongs to the role Master Data Specialist - Bank Data (SAP_BR_MD_SPECIALIST_BNK). That is the role needed for bank creation/maintenance authorization.

Step 9: Add the role

After selecting the role:

Click OK or Apply

Explanation:

This adds the role to your user in draft mode.

Step 10: Save the business user

Back on the business user page:

Click Save

Explanation:

This finalizes the new role assignment.

Step 11: Confirm both migration-related roles are assigned

After saving, verify that your user now has both:

BR_CONFIG_EXPERT_DATA_MIG

SAP_BR_MD_SPECIALIST_BNK

Explanation:

These two roles cover different parts of the scenario:

BR_CONFIG_EXPERT_DATA_MIG → migration cockpit access

SAP_BR_MD_SPECIALIST_BNK → bank master data creation/maintenance authorization

Step 12: Refresh your session After saving:

Refresh the browser completely, or

Sign out and sign in again

Explanation:

SAP role assignments may not become active in the current session immediately. A refresh or new login ensures the authorization is reloaded.

Step 13: Return to the migration project

Go back to:

Migrate Your Data

open your project:

Bank Data #####

open migration object:

Bank

Explanation:

Now that the additional bank role is assigned, the system should allow you to migrate bank master data successfully.

Expected Result

After this task is completed successfully:

your user still has the migration role BR_CONFIG_EXPERT_DATA_MIG,

your user also has the additional bank role SAP_BR_MD_SPECIALIST_BNK,

the authorization error for creating bank data should no longer occur,

the Bank migration can proceed successfully.

Screenshots for This Task

Screenshot 1: Assigned Business Roles list including the migration role Use the screenshot from your run where the business user already shows:

Configuration Expert - Data Migration

This screenshot can be used to explain the starting point before the additional role is assigned.

What this screenshot proves

It shows that the migration role alone was not enough for the bank creation authorization.

Screenshot 2: Migration error message

Use the screenshot from your run that shows the message:

You are not authorized to create bank data for country/region US

This is the key evidence that an additional bank master data role was required.

What this screenshot proves

It proves the migration cockpit role was present, but bank maintenance authorization was still missing.

Official SAP Documentation Basis

SAP's official documentation states that the Manage Banks - Master Data app is assigned to:

Master Data Specialist - Bank Data

SAP_BR_MD_SPECIALIST_BNK

within catalog:

Bank - Maintenance

SAP_CA_BC_BNK_PC

This is the basis for the additional role assignment required in this task.

NEW QUESTION # 19

SIMULATION

Create a Custom Business Role with Restrictions

Business Scenario:

You are building a custom business role with restrictions to ensure the end users assigned the role have only the minimum level of access necessary to complete their core job tasks. The end users are project managers based in the United States. They should only be able to create projects, edit projects, and access projects that are occurring in the United States. They should not be able to staff any resources outside of the United States. Write, Read, and Value Help access should be restricted to only the United States for all

relevant fields.

Prerequisites:

Note: In the task below, always replace ##### with the last 6 digits of your group number.

Note: Make sure to use the EXACT names/values/spaces as they are listed in the task. Even forgetting a space or a number will cause the validation of the task to fail and be marked as incorrect.

Task:

Use the template for the business role Project Manager - Professional Services (SAP_BR_PROJECT_MANAGER_PROF) to create a new business role with the following information:

Answer:

Explanation:

See Explanation below for all solution

Explanation:

Objective

The purpose of this task is to create a custom business role for project managers in the United States by using the standard SAP template role Project Manager - Professional Services and then restricting the role so users only have the minimum access needed for their job.

The template role used is:

Template Business Role ID: SAP_BR_PROJECT_MANAGER_PROF

Template Business Role Description: Project Manager - Professional Services The new custom role must be created with exact values defined in the task.

Business Scenario Explanation

In this simulation, you are building a restricted custom role for project managers who work only in the United States.

The goal is to ensure that these end users:

can create and edit projects,

can access only projects occurring in the United States,

cannot work with projects or staffing outside the US,

have only the minimum level of authorization needed.

This is done in two major parts:

Create a new custom business role from the standard SAP template

Restrict the role values so only US-related data is allowed

Important Notes

Always replace ##### with the last 6 digits of your group number.

Every value must be entered exactly as shown.

Even one missing space or incorrect character can cause the simulation validation to fail.

You must also create and assign a launchpad space as part of the custom role creation.

Required Values for Role Creation

Use the following values exactly as shown in the task image.

Parameter

Value

New Business Role ID

BR_PROJECT_MANAGER_PROF_US_#####

New Business Role Description

Project Manager - Professional Services - US - #####

Option for Launchpad Spaces

Create and Assign Spaces Based on Space Templates

New Space ID

ZBR_PROJECT_MANAGER_PROF_US_#####

Activate IAM Apps

Yes (check the box)

Example

If your suffix is 000457, the values become:

BR_PROJECT_MANAGER_PROF_US_000457

Project Manager - Professional Services - US - 000457

ZBR_PROJECT_MANAGER_PROF_US_000457

Detailed Step-by-Step Procedure

Part 1: Open the standard template role

Step 1: Open the app "Maintain Business Roles"

From the SAP S/4HANA Cloud launchpad:

Log in to SAP S/4HANA Cloud.

Use the app search.

Search for:

Maintain Business Roles

Open the app.

Explanation:

This app is used to maintain standard and custom business roles.

Because this task requires creating a custom role from an existing template, this is the correct starting app.

Step 2: Search for the template role

Inside Maintain Business Roles:

In the search/filter area, search for:

SAP_BR_PROJECT_MANAGER_PROF

or

Project Manager - Professional Services

Open the standard SAP template role.

Explanation:

You must start from the standard template role because the task explicitly says to use the template for:

Project Manager - Professional Services

SAP_BR_PROJECT_MANAGER_PROF

Part 2: Create the custom role from the template

Step 3: Click "Create Derived Business Role"

On the template role page:

Click:

Create Derived Business Role

Explanation:

This function creates a customer-specific copy based on the standard SAP business role template.

It preserves the delivered role content but allows you to define your own role ID, description, restrictions, and launchpad space.

Step 4: Enter the custom role information

In the creation popup, enter the values exactly as follows:

Template = SAP_BR_PROJECT_MANAGER_PROF

New Business Role ID = BR_PROJECT_MANAGER_PROF_US_#####

New Business Role Description = Project Manager - Professional Services - US - ##### Option for Launchpad Spaces = Create and Assign Spaces Based on Space Templates New Space ID = ZBR_PROJECT_MANAGER_PROF_US_##### Activate

IAM Apps = checked Explanation:

These values define the new custom project manager role that will later be restricted to US-only access.

The space option is important because the task expects the role to include its own launchpad space.

Step 5: Confirm creation

Click OK

Explanation:

SAP now creates the custom role derived from the template and assigns the new launchpad space at the same time.

Part 3: Verify the newly created custom role

Step 6: Review the new custom role

After creation, SAP opens the new custom role.

Verify:

Business Role ID = BR_PROJECT_MANAGER_PROF_US_#####

Business Role Description = Project Manager - Professional Services - US - ##### Business Role Template ID =

SAP_BR_PROJECT_MANAGER_PROF Explanation:

This confirms the derived role was created correctly from the right SAP template.

Part 4: Maintain role restrictions

Step 7: Open "Maintain Restrictions"

On the custom role page:

Click:

Maintain Restrictions

Explanation:

This is the most important part of the task.

You are not only creating a role - you are also limiting the role so it only allows US-related values.

Step 8: Understand the rule for restriction maintenance

The PDF/task logic is:

Fields explicitly listed in the restriction table → keep them Restricted and enter the required values All other fields not listed in the task table → set them to Not Maintained Explanation:

This is essential.

If extra fields remain restricted or blank, the role may not validate correctly.

The safest approach is:

only maintain the required fields,

mark all unrelated fields as Not Maintained.

□ Part 5: Enter the required US restrictions

From your exercise run, the maintained values included restrictions such as:

Keep these kinds of fields restricted with US/1710 values where required Examples from your run:

Bank Country/Region Key

Read, Value Help = US

Value Help = US

Company Code

use 1710 only where the task table explicitly requires it

Purchasing Organization

use 1710 where required

Valuation Area

use 1710 where required

Explanation:

These are the exact business restrictions that make the role usable only for the intended geography and business scope.

Step 9: Set unrelated restriction fields to "Not Maintained"

For every field not included in the task's restriction list, choose:

Not Maintained

Examples from your screenshots included fields like:

Accounting Principle

Authorization Group for Business Partners

Billing Type

These should be Not Maintained unless they are explicitly listed in the task's required restriction table.

Explanation:

This removes unnecessary access and matches the task wording that all other fields should be set to Not Maintained.

□ Step 10: Save the restrictions

After all required values are entered and unrelated fields are marked Not Maintained:

Click Save

Explanation:

This saves the restriction profile of the role.

If you do not save here, the role will remain incomplete or in draft.

Part 6: Verify launchpad space and page creation

Step 11: Go to Launchpad Spaces

In the custom role:

Open the tab:

Launchpad Spaces

Verify that the assigned space exists:

ZBR_PROJECT_MANAGER_PROF_US_#####

Explanation:

Because you selected Create and Assign Spaces Based on Space Templates, SAP should have created and assigned the launchpad space automatically.

Step 12: Verify the created space

Open the assigned space and confirm:

the custom space exists,

it is customer-managed,

the pages are assigned correctly.

Explanation:

This proves that the new business role has its own launchpad structure as required by the task.

Expected Result

After this task is completed successfully:

a new custom role exists based on SAP_BR_PROJECT_MANAGER_PROF,

the role uses the exact required ID and description,

the role has a custom launchpad space,

IAM apps are activated,

restrictions are maintained for US-only access,

all irrelevant fields are set to Not Maintained,

the role is saved successfully.

NEW QUESTION # 20

SIMULATION

Create a Custom Launchpad Space and Page

Business Scenario

You are building a custom business role that will be assigned to all employees in the organization. The business role and its corresponding Launchpad Space and Page need to include the apps that have been granted through the business catalogs assigned to the business role to ensure employees have an easy time finding the relevant applications.

Note: In the task below, always replace ##### with the last 6 digits of your group number.

Note:

Make sure to use the EXACT names/values/spaces as they are listed in the task.

Even forgetting a space or a number will cause the validation of the task to fail and be marked as incorrect.

Task

Create a new business role (not from a template) with the information below.

Answer:

Explanation:

See Explanation below for all solution

Explanation:

Task 8: Create a New Business Role (Not from a Template)

Objective

The purpose of this task is to create a new custom business role for all employees in the organization. This role is intended to become the base role that will later be connected to the required business catalogs, launchpad space, and page so that employees can easily access the relevant apps.

This task explicitly says:

create a new business role

not from a template

use the exact values provided in the task

Business Scenario Explanation

You are building a role for all employees in the organization.

Unlike the earlier project-manager role, this one is not derived from a standard SAP template.

The purpose of this role is to provide a shared employee-level launchpad structure.

Later, the role will be used to:

assign business catalogs,

create a launchpad space,

create a launchpad page,

place apps on the page for employee self-service access.

In this step, the focus is only on creating the new business role with the correct identification and access category settings.

Important Notes

Always replace ##### with the last 6 digits of your group number.

Use the values exactly as shown.

Do not create this role from a template.

The access categories must be set exactly as required:

Unrestricted for all categories

Save the role at the end.

Required Values

Use the following values exactly as shown in the task screenshot

Step 1: Open the app "Maintain Business Roles"

From the SAP S/4HANA Cloud launchpad:

Log in to SAP S/4HANA Cloud.

Use the app search.

Search for:

Maintain Business Roles

Open the app.

Explanation:

This app is used to create, maintain, copy, derive, and restrict business roles.

Since this task requires creating a brand new custom role, this is the correct place to start.

Step 2: Start creating a new business role

Inside Maintain Business Roles:

Click New

Explanation:

This task explicitly says to create a role not from a template.

So you must use New, not:

Create From Template

Create Derived Business Role

Copy

Using New creates a completely customer-defined business role.

Step 3: Enter the business role ID

In the new business role creation screen:

In Business Role ID, enter:

Z_EMPLOYEES_ALL_#####

Example

For suffix 000013:

Z_EMPLOYEES_ALL_000013

Explanation:

This is the technical identifier of the new business role.

It must match the task exactly for validation to succeed.

Step 4: Enter the business role description

In Business Role Description, enter:

All Employee Role #####

Example

For suffix 000013:

All Employee Role 000013

Explanation:

This is the readable description shown in SAP and should exactly match the exercise requirement.

Step 5: Set access categories

In the Access Categories section, set all categories to:

Write, Read, Value Help = Unrestricted

Read, Value Help = Unrestricted

Value Help = Unrestricted

Explanation:

The task explicitly says:

Access Categories: Unrestricted for all categories

So all three category dropdowns must be left or set to Unrestricted.

This means:

the role is not restricted by country, company code, or other field-level limitation in this step, this role is intended to be broadly reusable for all employees.

Step 6: Review the role before saving

Before saving, verify:

Business Role ID is correct

Business Role Description is correct

all 3 access category values are Unrestricted

Explanation:

This avoids common mistakes such as:

wrong suffix,

extra spaces,

restricted instead of unrestricted values,

creating from template accidentally.

Step 7: Save the role

Click:

Save

Explanation:

This finalizes the new business role.

Without saving, the role remains only in draft and is not actually created.

Step 8: Verify the role after save

After saving, confirm that the role is displayed with:

Business Role ID = Z_EMPLOYEES_ALL_#####

Business Role Description = All Employee Role #####

Write Access / Read Access / Value Help Access = Unrestricted

Explanation:

This is the confirmation that the role was created successfully and matches the task requirement.

Expected Result

After the task is completed successfully:

a new custom business role exists,
it was created not from a template,
the role ID and description match the required values,
all access categories are Unrestricted,
the role is saved and available for the next steps.

NEW QUESTION # 21

SIMULATION

Create a Custom Launchpad Space and Page

Business Scenario

You are building a custom business role that will be assigned to all employees in the organization. The business role and its corresponding Launchpad Space and Page need to include the apps that have been granted through the business catalogs assigned to the business role to ensure employees have an easy time finding the relevant applications.

Note: In the task below, always replace ##### with the last 6 digits of your group number.

Note:

Make sure to use the EXACT names/values/spaces as they are listed in the task.

Even forgetting a space or a number will cause the validation of the task to fail and be marked as incorrect.

Task:

Create a Launchpad Space and Page with the information below.

□

Answer:

Explanation:

See Explanation below for all solution

Explanation:

Objective

The purpose of this task is to create a custom launchpad space and page for the all-employee business role so employees can easily find the apps granted through the assigned business catalogs.

This task belongs to the all-employee role created in the previous tasks, for example:

Business Role ID: Z_EMPLOYEES_ALL_#####

The page values shown in the task are:

Page Title: General

Page Description: General

□

Business Scenario Explanation

In SAP S/4HANA Cloud, business catalogs grant the app authorizations, but users still need a clean launchpad structure so they can actually find those apps easily.

That is why this task requires creating:

a Launchpad Space

a Launchpad Page

for the all-employee role.

The space acts like a container in the launchpad navigation, and the page acts like the content area where app tiles will later be displayed.

Important Notes

Always replace ##### with the last 6 digits of your group number.

Use the exact text values shown in the task.

The task image explicitly shows:

Page Title = General

Page Description = General

Save each object after creation.

Required Values

From the task image, use:

Parameter

Value

Page Title

General

Page Description

General

Additional execution values used in your run

During your actual execution, the custom launchpad space/page used this pattern:

Space ID: Z_ALL_EMP_#####

Space Description: General

Space Title: General

Page ID: Z_ALL_EMP_#####

Page Title: General

Page Description: General

Objective

The purpose of this task is to create a custom launchpad space and page for the all-employee business role so employees can easily find the apps granted through the assigned business catalogs.

This task belongs to the all-employee role created in the previous tasks, for example:

Business Role ID: Z_EMPLOYEES_ALL_#####

The page values shown in the task are:

Page Title: General

Page Description: General

Business Scenario Explanation

In SAP S/4HANA Cloud, business catalogs grant the app authorizations, but users still need a clean launchpad structure so they can actually find those apps easily.

That is why this task requires creating:

a Launchpad Space

a Launchpad Page

for the all-employee role.

The space acts like a container in the launchpad navigation, and the page acts like the content area where app tiles will later be displayed.

Important Notes

Always replace ##### with the last 6 digits of your group number.

Use the exact text values shown in the task.

The task image explicitly shows:

Page Title = General

Page Description = General

Save each object after creation.

Required Values

From the task image, use:

Parameter

Value

Page Title

General

Page Description

General

Additional execution values used in your run

During your actual execution, the custom launchpad space/page used this pattern:

Space ID: Z_ALL_EMP_#####

Space Description: General

Space Title: General

Page ID: Z_ALL_EMP_#####

Page Title: General

Page Description: General

NEW QUESTION # 22

SIMULATION

Set up an Integration Scenario

Business Scenario

You are responsible for setting up the Bank Integration with File Interface (1EG). During an actual implementation, you would first download the Set-up Instructions for the business process from SAP Signavio Process Navigator. In this practical exam, all the information will be provided to you, so you do not need to download the Set-up Instructions.

Prerequisites

Note:

In the task below, always replace ##### with the last 6 digits of your group number.

Note:

Make sure to use the EXACT names/values/spaces as they are listed in the task. Even forgetting a space or a number will cause the validation of the task to fail and be marked as incorrect.

Your Task

Create a Communication System with the information listed below and save.

Answer:

Explanation:

See Explanation below for all solution

Explanation:

Objective

The purpose of this task is to create a Communication System for the integration scenario Bank Integration with File Interface (1EG).

This communication system will later be used in the communication arrangement and will reference the communication user created in the previous task.

Business Scenario Explanation

In this scenario, you are setting up:

Bank Integration with File Interface (1EG)

In SAP S/4HANA Cloud, the technical setup typically requires:

a Communication User

a Communication System

a Communication Arrangement

In Task 13, you created the communication user.

In Task 14, you now create the communication system and link that previously created communication user for inbound communication.

The communication system represents the external or technical integration partner definition used in the scenario.

Important Notes

Always replace ##### with the last 6 digits of your group number.

Use the exact values shown in the task.

Do not change capitalization, underscores, or spacing.

The communication user assigned in this task must be the one created in the previous step:

1EG_COMM_USER_#####

Required Values

Use the following values exactly as shown in the task image.

Example

If your suffix is 000013, then the values become:

System ID = 1EG_SYSTEM_000013

System Name = Bank Integration with File Interface

Host Name = DUMMY

Inbound Communication User = 1EG_COMM_USER_000013

Step 1: Open the app "Communication Systems"

From the SAP S/4HANA Cloud launchpad:

Log in to SAP S/4HANA Cloud.

Use the search bar or app finder.

Search for:

Communication Systems

Open the app.

Explanation:

This app is used to create and maintain technical communication systems for integration scenarios.

Because the task explicitly asks to create a Communication System, this is the correct app.

Step 2: Start creating a new Communication System

Inside the Communication Systems app:

Click:

New

Explanation:

This starts the creation of a new communication system record.

Step 3: Enter the System ID

In the communication system creation screen, enter:

System ID = 1EG_SYSTEM_#####

Example

If your suffix is 000013, enter:

1EG_SYSTEM_000013

Explanation:

This is the technical ID of the communication system.

It must exactly match the task requirement.

Step 4: Enter the System Name

In the System Name field, enter exactly:

Bank Integration with File Interface

Explanation:

This is the descriptive name of the communication system and must be entered exactly as provided.

Step 5: Enter the Host Name

In the Host Name field, enter exactly:

DUMMY

Explanation:

For this simulation, the host is not a real productive endpoint.

The task explicitly requires the placeholder value DUMMY.

Step 6: Maintain the inbound communication user

Locate the section for:

Users for Inbound Communication

Then:

Click Add or select the entry field/value help

Choose the communication user created in the previous task:

1EG_COMM_USER_#####

Example

If your suffix is 000013, select:

1EG_COMM_USER_000013

Explanation:

This is a critical link between the communication user and the communication system.

Without assigning the previously created communication user, the communication system setup is incomplete.

Step 7: Verify the inbound user assignment

After adding the inbound communication user, confirm that the selected user is:

1EG_COMM_USER_#####

Explanation:

This confirms that the system will use the correct technical user for inbound communication in the later communication arrangement.

Step 8: Review all entered values

Before saving, check the following:

System ID = 1EG_SYSTEM_#####

System Name = Bank Integration with File Interface

Host Name = DUMMY

Users for Inbound Communication = 1EG_COMM_USER_#####

Explanation:

This review helps avoid validation issues caused by incorrect naming, missing underscores, or selecting the wrong communication user.

Step 9: Save the Communication System

Click:

Save

Explanation:

This finalizes the creation of the communication system.

Without saving, the communication system will not exist for the next task.

Step 10: Verify the saved Communication System

After saving, confirm that the communication system exists and displays the correct values:

1EG_SYSTEM_#####

Bank Integration with File Interface

Host = DUMMY

inbound user = 1EG_COMM_USER_#####

Explanation:

This confirms the system is successfully created and ready for the communication arrangement setup in the next step.

Expected Result

After this task is completed successfully:

the communication system exists,
the system ID matches the required naming pattern,
the system name is correct,
the host name is DUMMY,
the previously created communication user is assigned for inbound communication, the system is saved successfully.

NEW QUESTION # 23

.....

Get the test C-S4CPB-2602 certification requires the user to have extremely high concentration will all test sites in mind, and this is definitely a very difficult. Our C-S4CPB-2602 learning questions can successfully solve this question for you for the content are exactly close to the changes of the C-S4CPB-2602 Real Exam. When you grasp the key points, nothing will be difficult for you anymore. Our professional experts are good at compiling the C-S4CPB-2602 training guide with the most important information. Believe in us, and your success is 100% guaranteed!

New C-S4CPB-2602 Braindumps Ebook: <https://www.briandumpsprep.com/C-S4CPB-2602-prep-exam-braindumps.html>

More and more workers have to spend a lot of time on meeting the challenge of gaining the C-S4CPB-2602 certification by sitting for an exam, SAP Free C-S4CPB-2602 Braindumps You can study according to your personal habits and time schedules regardless of where and when, If you are using our C-S4CPB-2602 practice material, then congratulations as you are using an updated C-S4CPB-2602 test simulator preparation material, SAP Free C-S4CPB-2602 Braindumps We do not disclose your personal information under any condition.

Do you work too many hours at a passionless job, You can filter C-S4CPB-2602 the samples and manipulate the call trees Shark reports, but the product is still a compilation over a period of time.

More and more workers have to spend a lot of time on meeting the challenge of gaining the C-S4CPB-2602 Certification by sitting for an exam, You can study according to your personal habits and time schedules regardless of where and when.
