ACP-120 Exam Fragen, ACP-120 Fragen Und Antworten

Die Fragenkataloge von ATlassian ACP-120 von unserem It-Pruefung existieren in der Form von PDF und Stimulationsoftware. Wir aktualisieren unsere Materialien regelmäßig, so dass Sie immer die aktuellen und genauen Informationen über die Fragenkataloge von ATlassian ACP-120 erhalten können. Nach langjährigen Bemühungen haben unsere Erfolgsquote

von der ATlassian ACP-120 Zertifizierungsprüfung 100% erreicht.

ATlassian Jira Cloud Administrator ACP-120 Prüfungsfragen mit Lösungen (Q10-Q15):

10. Frage

A project has hundreds of old completed issues which are cluttering up the reports, searches, and dashboards.

The project administrator has the following requirements:

1. He wants to hide the old issues.
2. He wants to unhide issues, if needed.
3. He wants to control whether he himself sees the hidden issues, so they do not clutter his own daily work.

Which three configurations, when combined, will meet these requirements? (Choose three.)

- A. security level
- B. workflow condition
- C. global permission
- D. project role
- E. project permission
- F. group

Antwort: D,E,F

11. Frage

You install a new Jira instance using only the default configurations.

A team approaches you to set up a project with the following specifications:

- There are four standard issue types and three sub-task issue types.
- The first sub-task will need a new screen for the Edit operation.
- The second sub-task will need new screens for both the Create and Edit operations.
- Everything else should use the default configurations.

How many new Screen Schemes do you need to create?

- A. 0
- B. 1
- C. 2
- D. 3
- E. 4

Antwort: D

12. Frage

Jon is a new Jira user. He reports that adding comments to Jira isn't working as expected. When he attempts to @mention a user, no list of available users is provided. Because he does not know everyone's username, he is unable to target comments to specific users. What is the cause of this problem?

- A. Jon does not have the View Users project permission.
- B. Jon does not have the correct field security permission for the Comment field.
- C. The field configuration for the Comment field is not set to Autocomplete Renderer.
- D. Jon does not have the Browse Users global permission.

Antwort: C

Begründung:

Reference: <https://community.atlassian.com/t5/Jira-questions/Can-t-Mention-other-users/qaq-p/5238>

13. Frage

Two users have access to the same filter and see the same issues in a company-managed project. One of them can perform a bulk operation to watch issues in the filter, but the other user cannot. What should you investigate?

- A. Default user preferences
- B. Groups
- C. Product access
- **D. Project permissions**
- E. Project roles

Antwort: D

Begründung:

The scenario describes two users who can view the same issues in a filter (indicating they have the Browse Projects permission), but only one can perform a bulk operation to watch issues. The ability to watch issues is controlled by the View Issue Watchers and Manage Watcher List permissions in the project's permission scheme. Therefore, you should investigate project permissions (Option A).

* Explanation of the Correct Answer (Option A):

* Performing a bulk operation to watch issues requires the Manage Watcher List permission, which allows users to add themselves or others as watchers to an issue. Since both users can see the issues (via the filter), they likely have the Browse Projects permission, but the user who cannot perform the bulk operation may lack the Manage Watcher List permission.

* Exact Extract from Documentation:

Manage Watcher List permission

The Manage Watcher List permission allows users to add or remove watchers from an issue, including via bulk operations. This permission is granted via the project's permission scheme.

Note: To view the watcher list, users also need the View Issue Watchers permission. Both permissions are required to perform actions like bulk watching issues.

To check permissions:

* Go to Project settings > Permissions.

* Review the Manage Watcher List and View Issue Watchers permissions to see which users, groups, or roles have them. (Source: Atlassian Support Documentation, "Manage permissions in Jira Cloud")

* Why This Fits: The difference in the users' ability to perform the bulk watch operation is most likely due to a difference in their Manage Watcher List permission, which is defined in the project's permission scheme. Investigating project permissions will reveal whether the second user lacks this permission.

* Why Other Options Are Incorrect:

* Product access (Option B):

* Product access determines whether users can use Jira Software. Both users can view the filter and issues, indicating they have product access. Product access does not control specific permissions like managing watchers.

* Extract from Documentation:

Manage product access

Product access grants users the ability to use Jira products. Specific actions, like managing watchers, are controlled by project or global permissions, not product access.

(Source: Atlassian Support Documentation, "Manage product access")

* Groups (Option C):

* Groups may be used in permission schemes to grant permissions, but the root cause is the permission itself, not the group membership. Investigating groups might be a secondary step after checking project permissions, but project permissions is the more direct answer.

* Extract from Documentation:

Groups are used in permission schemes to grant permissions to multiple users. To determine why a user lacks a permission, check the permission scheme first, then verify group membership if relevant.

(Source: Atlassian Support Documentation, "Manage groups")

* Default user preferences (Option D):

* Default user preferences (e.g., notification settings) control whether a user receives notifications for watched issues, not their ability to watch issues. The issue is about performing a bulk operation, not receiving notifications.

* Extract from Documentation:

Manage user preferences

Users can manage their notification preferences in Personal settings > Email notifications. These settings affect notification delivery, not the ability to perform actions like watching issues.

(Source: Atlassian Support Documentation, "Manage your Jira notification emails")

* Project roles (Option E):

* Project roles are used in permission schemes to grant permissions. Like groups, roles are a means to assign permissions, but the issue lies in the permission itself (Manage Watcher List). Investigating project permissions directly addresses the root cause.

* Extract from Documentation:

Project roles are used in permission schemes to grant permissions like Manage Watcher List. Check the permission scheme to identify the root cause of permission differences.

(Source: Atlassian Support Documentation, "Manage project roles")

* Additional Notes:

* Both users can see the filter and issues, so they likely have the Browse Projects permission. The difference in their ability to perform the bulk watch operation points to the Manage Watcher List permission, which should be checked in Project settings > Permissions.

* If the permission is granted to a group or role, verify the users' membership in those groups or roles as a follow-up step.

14. Frage

Jon needs to create groups and manage membership in groups. Which administrator privilege does Jon need?

- **A. Jira administrator**
- B. Product Admin role for Jira
- C. Project administrator
- D. Organization admin
- E. System administrator

Antwort: A

Begründung:

Creating groups and managing group membership in Jira Software Cloud are system-level tasks that require the Jira administrator privilege. This privilege allows Jon to access user management settings and perform group-related actions.

* Explanation of the Correct Answer (Option D):

* The Jira administrator privilege grants users the ability to manage global settings, including creating groups and managing their membership. This includes adding or removing users from groups, which is necessary for Jon's requirements.

* Exact Extract from Documentation:

Jira administrator permissions

Jira administrators can manage global settings, including:

* Creating and deleting groups.

* Adding or removing users from groups.

* Managing global permissions and user access. To create or manage groups:

* Go to Settings > User management > Groups.

* Create a new group or edit existing group membership. Note: Only Jira administrators or organization admins with user management permissions can perform these actions. (Source:

Atlassian Support Documentation, "Manage groups in Jira Cloud")

* Why This Fits: The Jira administrator privilege directly enables Jon to create groups and manage their membership, making Option D the correct choice.

* Why Other Options Are Incorrect:

* Organization admin (Option A):

* Organization admins manage the Atlassian organization, including user access to products and billing. While they can manage users and groups at the organization level, creating groups specifically in Jira requires Jira administrator privileges unless the organization admin also has this role.

* Extract from Documentation:

Organization admins manage user access, billing, and security at the Atlassian organization level. Managing Jira-specific groups requires Jira administrator privileges.

(Source: Atlassian Support Documentation, "Manage your Atlassian organization")

* Product Admin role for Jira (Option B):

* The Product Admin role for Jira grants access to manage product-specific settings, such as user access to Jira Software. However, creating and managing groups is a system-level task that requires Jira administrator privileges.

* Extract from Documentation:

Product admins manage user access to specific products (e.g., Jira Software). Group management requires Jira administrator or organization admin privileges.

(Source: Atlassian Support Documentation, "Manage product access")

* System administrator (Option C):

* The term system administrator is not a standard role in Jira Cloud. In some contexts, it may refer to Jira administrators or organization admins, but it is not a distinct privilege for group management.
