## Development-Lifecycle-and-Deployment-Architect専門知識 & Development-Lifecycle-and-Deployment-Architect日本語練習問題

ShikenPASSのSalesforceのDevelopment-Lifecycle-and-Deployment-Architect試験トレーニング資料はほかのサイトでの資料よりもっと正確的で、もっと理解やすくて、もっと権威性が高いです。ShikenPASSを選ぶなら、きっと君に後悔させません。もし君はいささかな心配することがあるなら、あなたはうちの商品を購入する前に、ShikenPASSは無料でサンプルを提供することができます。ShikenPASSのSalesforceのDevelopment-Lifecycle-and-Deployment-Architect問題集を購入するなら、君がSalesforceのDevelopment-Lifecycle-and-Deployment-Architect認定試験に合格する率は１００パーセントです。

## Salesforce Certified Development Lifecycle and Deployment Architect 認定 Development-Lifecycle-and-Deployment-Architect 試験問題 (Q33-Q38):

**質問 #33**
Universal Containers is reviewing its environment strategy. They have identified a need for a new hotfix environment to resolve any urgent production issues.
Which two sandbox types would be appropriate to use as the hotfix environment?
Choose 2 answers

- A. Full sandbox
- B. Developer Pro sandbox
- C. Developer sandbox
- D. Partial Copy sandbox

**正解：B、C**

解説：
Explanation
The two sandbox types that would be appropriate to use as the hotfix environment are Developer sandbox and Developer Pro sandbox. These sandbox types are suitable for testing and deploying quick fixes, as they are easy to create and refresh, and have a minimal data and metadata footprint. A Partial Copy sandbox or a Full sandbox would be too large and complex for a hotfix environment, and would take longer to create and refresh.

**質問 # 34**
Universal Containers has just initiated a project involving a large distributed development and testing team.
The development team members need access to a tool to manage requirements and the testing team needs access to a tool to manage defects. Additionally, stakeholders are requesting ad -hoc status reports. What tool should an Architect recommend to support the project?

- A. Port management tool
- B. Spreadsheets
- C. Wave
- D. Code Repository

**正解：A**

解説：
Explanation
A Port management tool is a tool that can support a project involving a large distributed development and testing team, by providing features such as requirements management, defect tracking, collaboration, and reporting. A Port management tool can also integrate with other tools, such as code repositories, testing tools, and deployment tools, to provide a comprehensive view of the project status and progress. A Spreadsheet is not a suitable tool for managing requirements and defects, as it is prone to errors, duplication, and inconsistency. A Code Repository is a tool that stores and manages the source code of the system, but does not manage requirements and defects. Wave is a tool that provides analytics and insights on data, but does not manage requirements and defects.

**質問 # 35**
Universal Containers has multiple minor and major releases in a year. Minor releases have sample configuration changes, while major releases involve large number of complex code components. What deployment tools should an architect recommend for both types of releases?

- A. Change sets for minor releases and Force.com IDE for major releases.
- B. Force.com IDE for minor releases and metadata API for major releases.
- C. Change sets for both minor releases and major releases.
- D. Change sets for minor releases and metadata API for major releases.

**正解：D**

解説：
Explanation
Change sets for minor releases and metadata API for major releases is the best deployment tool recommendation for both types of releases. Change sets are a native Salesforce tool that allows the team to deploy configuration changes between connected orgs. They are suitable for minor releases that have simple configuration changes, such as adding fields, objects, or workflows. Metadata API is a more advanced tool that allows the team to deploy both configuration and code changes between any orgs. It is suitable for major releases that have large number of complex code components, such as Apex classes, triggers, Visualforce pages, or Lightning components.

**質問 # 36**

Which two environments are appropriate for creating a managed package? Choose 2 answers

- A. Partner Developer Edition Org
- B. Developer Edition Org
- C. Production Org with LMA
- D. Developer Pro Sandbox Org

正解：A、B

質問 # 37
Universal Containers is adopting Scrum as an agile methodology and wants to choose a software tool to support the adoption. What three key features of an agile development support tool should an architect look for? Choose 3 answers

- A. Email notifications when work is created or changed
- B. Product backlog prioritization
- C. Kanban board
- D. Work (for example,user stories or tasks) assignment
- E. Sprint backlog management

正解：B、D、E

解説：
The key features of an agile development support tool that an architect should look for are sprint backlog management, product backlog prioritization, and work assignment. These features enable the team to plan, execute, and monitor the sprints effectively and efficiently. Email notifications and Kanban board are not essential features of an agile development support tool, as they can be achieved by other means or tools.
