

Actual GICSP Global Industrial Cyber Security Professional (GICSP) Exam Questions with accurate answers

Do not ask me why you should purchase Global Industrial Cyber Security Professional (GICSP) GICSP valid exam prep, of course it is because of its passing rate. As every one knows certification is difficult to pass, its passing rate is low, if you want to save exam cost and money, choosing a GICSP Valid Exam Prep will be a nice option.

If you are still struggling to get the GIAC GICSP exam certification, DumpsReview will help you achieve your dream. DumpsReview's GIAC GICSP exam training materials is the best training materials. We can provide you with a good learning platform. How do you prepare for this exam to ensure you pass the exam successfully? The answer is very simple. If you have the appropriate time to learn, then select DumpsReview's GIAC GICSP Exam Training materials. With it, you will be happy and relaxed to prepare for the exam.

GICSP Valid Exam Format & Latest GICSP Test Pass4sure

You may be get refused by so many GICSP study dumps in the present market, facing so many similar GICSP study guide, so how can you distinguish the best one among them? We will give you some suggestions, first of all, you need to see the pass rate, for all the efforts we do to the GICSP Study Dumps is to pass. Our company guarantees the high pass rate. Second, you need to see the feedback of the customers, since the customers have used it, and they have the evaluation of the GICSP study guide.

GIAC Global Industrial Cyber Security Professional (GICSP) Sample Questions (Q75-Q80):

NEW QUESTION # 75

What is an output of a Business Impact Analysis?

- A. Understanding all of the business's technology functions
- B. Prioritizing the business's processes

- C. Calculating the financial impact of a technology failure
- D. Determining the maximum time that systems can be offline

Answer: B

Explanation:

Comprehensive and Detailed Explanation From Exact Extract:

A Business Impact Analysis (BIA) primarily produces a prioritization of the business's processes (B) based on their criticality and impact on organizational goals.

While BIAs help understand downtime tolerance (A) and financial impacts (C), prioritization is the core output guiding recovery efforts.

Understanding technology functions (D) is part of broader asset and risk management but not the primary BIA output.

GICSP highlights BIA as essential for aligning ICS recovery priorities with business needs.

NEW QUESTION # 76

Which of the following technologies uses Secure Simple Pairing (SSP) to pair devices?

- A. WirelessHART
- B. ISA100.11a
- **C. Bluetooth**
- D. Zigbee

Answer: C

Explanation:

Comprehensive and Detailed Explanation From Exact Extract:

Secure Simple Pairing (SSP) is a security feature used in Bluetooth technology (B) to provide improved authentication and encryption during device pairing.

Zigbee (A), WirelessHART (C), and ISA100.11a (D) use different security mechanisms adapted to industrial wireless environments and do not use SSP.

GICSP training covers Bluetooth SSP as part of wireless security protocols.

NEW QUESTION # 77

What is a characteristic of Windows Server Update Services (WSUS) in an ICS environment?

- A. Inventories both hardware and software within an Active Directory domain
- **B. Allows the administrator to create custom groups of computers**
- C. Requires the clients to connect to the Internet to download patches

Answer: B

Explanation:

WSUS enables centralized patch management and allows administrators to create custom groups of computers (C) to target updates and schedules appropriately, which is useful in segmented ICS environments.

WSUS clients do not require direct Internet access (A) as WSUS servers can download updates centrally.

WSUS does not perform hardware or software inventory (B); that functionality is provided by other tools like MECM.

GICSP highlights WSUS as a practical tool for managing patches in ICS with fine-grained control.

NEW QUESTION # 78

How is a WirelessHART enabled device authenticated?

- A. Using a PIN combined with the device MAC address
- **B. Using a join key to send an encrypted request for the shared network key**
- C. Using a WPA2 pre-shared key entered by an administrator
- D. Using the vendor hard-coded master key to obtain a link key

Answer: B

Explanation:

Comprehensive and Detailed Explanation From Exact Extract:

WirelessHART is a secure, industrial wireless protocol widely used in process control. Its security architecture uses a layered approach including encryption and authentication mechanisms to protect communications.

WirelessHART devices authenticate by first using a join key, which is a shared secret configured in both the device and the network manager. The device uses this join key to send an encrypted request to the network manager.

Upon successful authentication, the device receives the network key, which is used for encrypting ongoing communications within the network.

This method ensures that only authorized devices can join the network and participate in secure communications.

WPA2 (A) is a Wi-Fi standard, not used in WirelessHART; the vendor hard-coded master key (C) is discouraged due to security risks; and PIN plus MAC address (D) is not a WirelessHART authentication method.

This procedure is detailed in the GICSP's ICS Security Architecture domain, highlighting wireless device authentication protocols as per WirelessHART specifications.

NEW QUESTION # 79

Which of the following would use round-robin process scheduling?

- **A. Operator workstation in the control room**
- B. Data-diode at an enforcement boundary
- C. Temperature sensor in the field
- D. Embedded device on the plant floor

Answer: A

Explanation:

Round-robin scheduling is a common time-sharing CPU scheduling algorithm used in general-purpose operating systems to allocate processor time fairly among processes.

An operator workstation (C) typically runs a general-purpose OS (like Windows), which uses round-robin or similar scheduling algorithms.

Embedded devices (A, B) often use real-time operating systems (RTOS) with priority-based or deterministic scheduling.

A data diode (D) is a hardware device and does not use process scheduling.

GICSP discusses scheduling differences in the context of embedded and general-purpose systems.

NEW QUESTION # 80

.....

Every person in the IT industry has his own dream: to pass GICSP certification exam, or a promotion, a raise and so on in the IT career. The dream of DumpsReview is to help you achieve GICSP exam certification. After you purchase our GICSP Exam Dumps training materials, we will provide one year free renewal service. If you fail GICSP certification exam, we can guarantee you that we

will give you a full refund.
