Many students often start to study as the exam is approaching. Time is very valuable to these students, and for them, one extra hour of study may mean 3 points more on the test score. If you are one of these students, then AE-Adult-Echocardiography exam tests are your best choice. Because students often purchase materials from the Internet, there is a problem that they need transport time, especially for those students who live in remote areas. When the materials arrive, they may just have a little time to read them before the exam. However, with AE-Adult-Echocardiography Exam Questions, you will never encounter such problems, because our materials are distributed to customers through emails. After you have successfully paid, you can immediately receive AE-Adult-Echocardiography test guide from our customer service staff, and then you can start learning immediately.

With decades years in IT industry, TorrentExam has gain millions of successful customers as for its high quality exam dumps. Now, ARDMS AE-Adult-Echocardiography study practice cram will give you new directions and help you to get your AE-Adult-Echocardiography certification in the easiest and fastest way. All the questions are selected from the AE-Adult-Echocardiography Original Questions pool, and then compiled and verified by our IT professionals for several times checkout. We promise you 100% pass rate.

Once you have practiced and experienced the quality of our AE-Adult-Echocardiography exam preparation, you will remember the serviceability and usefulness of them. For the excellent quality of our AE-Adult-Echocardiography training questions explains why our AE-Adult-Echocardiography practice materials helped over 98 percent of exam candidates get the certificate you dream of successfully. Believe me with our AE-Adult-Echocardiography Guide quiz, you will be more confident to pass the exam in the shortest time with ease.

ARDMS AE Adult Echocardiography Examination Sample Questions (Q125-Q130):

NEW QUESTION # 125

Which adjustment will improve the frame rate?

- A. Increase dynamic range
- B. Decrease overall gain
- C. Increase transducer frequency
- D. Narrow sector width

Answer: D

Explanation:

Frame rate in echocardiography is affected by the sector width, depth, and line density. Narrowing the sector width reduces the number of scan lines per frame, thus increasing the frame rate and temporal resolution. This improves the ability to capture rapid cardiac motion.

Decreasing overall gain affects image brightness, not frame rate. Increasing dynamic range increases the number of gray shades, which may slightly decrease frame rate due to processing load. Increasing transducer frequency improves resolution but reduces penetration depth and can decrease frame rate due to longer pulse duration.

This principle is emphasized in echocardiography physics and instrumentation texts and ASE imaging guidelines#16:Textbook of Clinical Echocardiography, 6ep.40-45##12:ASE Imaging Protocolsp.10-15#.

NEW QUESTION # 126

Which statement is most accurate regarding cardiac contusion?

- A. It can result from a myocardial infarction.
- **B. It affects the right ventricle more commonly than the left.**
- C. It leads to hypercontractility of the left ventricle
- D. It is focal ventricular hypertrophy.

Answer: B

Explanation:

Cardiac contusion is a myocardial injury resulting from blunt chest trauma, typically affecting the right ventricle more commonly than the left ventricle because of its anterior location and proximity to the chest wall. The injury can range from mild bruising to severe myocardial damage and dysfunction.

It does not result from myocardial infarction (which is ischemic injury), nor does it cause hypertrophy or hypercontractility. Instead, it may cause wall motion abnormalities, arrhythmias, or even rupture.

These features are detailed in echocardiography and trauma cardiology literature, including the "Textbook of Clinical Echocardiography" and clinical guidelines on blunt cardiac injury#16:Textbook of Clinical Echocardiography, 6ep.600-605##12:ASE Trauma Cardiology Guidelinesp.500-505#.

NEW QUESTION # 127

A patient presents with tender, red lesions on their fingers and toes (Osler nodes). Which finding is most likely?

- A. Lambl excrescences
- **B. Infective endocarditis**
- C. Carcinoid heart disease
- D. Papillary fibroelastoma

Answer: B

Explanation:

Osler nodes are tender, erythematous nodules typically located on the fingers and toes, and are a classic sign of infective endocarditis (IE). They represent immune complex deposition and microemboli causing localized vasculitis.

Carcinoid heart disease presents with right-sided valve fibrosis and not with Osler nodes. Lambl excrescences are small filiform valvular strands without clinical manifestations such as Osler nodes. Papillary fibroelastomas are benign cardiac tumors that may cause emboli but not immune-mediated skin lesions.

This classic clinical sign and its echocardiographic correlation in IE are discussed in the "Textbook of Clinical Echocardiography, 6e", Chapter on Infective Endocarditis#20:400-405Textbook of Clinical Echocardiography#.

NEW QUESTION # 128

Which unit of measurement is used to quantify tricuspid annular plane systolic excursion?

- **A. Centimeters**
- B. Millimeters of mercury
- C. Centimeters/second
- D. Milliliters/minute

Answer: A

Explanation:

Tricuspid annular plane systolic excursion (TAPSE) is measured as the linear displacement of the tricuspid annulus during systole and is expressed in centimeters (cm). It quantifies right ventricular longitudinal systolic function.

Centimeters per second is a velocity measurement used in tissue Doppler imaging. Milliliters per minute refers to volume flow, and millimeters of mercury measures pressure.

This is standardized in the "Textbook of Clinical Echocardiography, 6e", Chapter on Right Ventricular Functional Assessment#20:320-325Textbook of Clinical Echocardiography#.

NEW QUESTION # 129

Which of the following conditions will increase in severity with Valsalva maneuver?

- A. Mitral valve regurgitation
- B. Aortic valve regurgitation
- **C. Hypertrophic obstructive cardiomyopathy**
- D. Aortic valve stenosis

Answer: C

Explanation:

The Valsalva maneuver decreases preload and left ventricular volume, which exacerbates left ventricular outflow tract obstruction in hypertrophic obstructive cardiomyopathy (HOCM). This results in an increase in the gradient and severity of obstruction and symptoms during the maneuver.

Aortic valve stenosis, aortic regurgitation, and mitral regurgitation typically decrease or do not significantly change during Valsalva because of decreased flow and pressure.

This physiological response is detailed in the "Textbook of Clinical Echocardiography, 6e", Chapter on Dynamic Left Ventricular Outflow Obstruction and Maneuvers#20:370-375Textbook of Clinical Echocardiography#.

NEW QUESTION # 130
