ISTQB Certified Tester Usability Tester Sample Questions (Q25-Q30):

NEW QUESTION # 25

Which of the following statements about usability test plans is true?

- **A. It contains a schedule**
- B. It should be very elaborate and at least 10 pages
- C. It contains the results of the test sessions
- D. It should contain the briefing instructions

Answer: A

Explanation:

A usability test plan is a foundational document created before conducting usability testing. It outlines the objectives, scope, methodology, participants, tasks, and schedule for the testing activities. One of its essential components is the schedule, which details when and how test sessions will occur to ensure proper resource allocation and time management. Including a schedule helps coordinate between test moderators, participants, observers, and stakeholders, making the testing process organized and efficient. While briefing instructions (Option B) may be related to the usability test, they are typically documented separately or included in participant materials rather than the formal test plan itself. The test plan should be concise and focused; it need not be overly elaborate or lengthy (Option C), as clarity and usability of the plan are more important than length. The results of the test sessions (Option D) are not included in the test plan but rather compiled afterward in a test report or analysis document. Therefore, the correct statement is that the usability test plan contains a schedule, ensuring a structured timeline for the usability testing activities.

NEW QUESTION # 26

The usability team has written a usability test report. The report has the following structure:

Executive summary (1 page)

Table of contents (1 page)

Findings and recommendations (5 pages)

Objectives (2 pages)

Purpose (2 pages)

Contacts (1 page)

Which best practice does this usability test report violate?

- **A. The report misses a description of the evaluation method**
- B. The report makes use of usability jargon
- C. The report misses positive findings
- D. The report is too long

Answer: A

Explanation:

A best practice in usability reporting (based on ISO/IEC 25062:2006 - Common Industry Format for usability test reports) is to include a clear description of the evaluation method used. This includes how the test was designed, how participants were selected, what tasks were performed, and under what conditions the test was conducted. This ensures the results are credible and reproducible. The provided structure omits this essential information. While the report length is not excessive and positive findings

may or may not be present, the key missing component is the method description.

NEW QUESTION # 27

How can the approach for conducting user surveys be summarized best?

- A. Write survey plan, write schedule, select questionnaire, recruit users, remind users, communicate
- B. Write survey plan, write schedule, select questionnaire, recruit users, analyze, communicate
- **C. Write survey plan, interview users and stakeholders, select questionnaire, deploy questionnaire, analyze, communicate**
- D. Write survey plan, interview users and stakeholders, select questionnaire, recruit users, remind users, communicate

Answer: C

Explanation:

Conducting user surveys involves a structured approach that ensures data collection is effective, reliable, and meaningful. The process typically starts with writing a survey plan, which defines the objectives, scope, target population, and methodology. Next, interviewing users and stakeholders is important to gather qualitative insights, refine survey questions, and align the survey with business goals and user needs.

Selecting or designing the questionnaire follows, which includes crafting clear, unbiased questions to capture the desired data. After that, deploying the questionnaire to the recruited participants is essential; this can be done via email, online tools, or in-person, depending on the context. Once the data is collected, it must be analyzed to extract meaningful patterns, trends, and insights. Finally, communicating the findings to stakeholders completes the process by informing decision-making.

Other options miss critical steps such as deploying the questionnaire (Option C), or combine steps incorrectly (Options A and D). Importantly, the step of interviewing users and stakeholders prior to deployment ensures the survey is well-informed and targeted, enhancing the quality and relevance of data collected.

NEW QUESTION # 28

A large customer complained that a business application developed by your company sometimes transfers the wrong amount of money to clients, although there are no complaints of the actual users. The expected amount differs from the actually transferred amount by a factor of 10 or 100. After analyzing the log files, you found out that the application itself works fine. The problem seems to be caused by confusing text fields and labels for the decimal place, leading to user errors.

Which usability risk should be reasonably addressed for the next release?

- A. Users resist using a software product which is essential for their daily work because it lacks usability
- B. Users buy the software product but repeatedly need to call support because they don't understand how to use it
- C. Users won't buy or use the software product because it lacks effectiveness, efficiency or satisfaction
- **D. Increased liability through risk to financial loss caused by a poorly designed or deceptive user interface**

Answer: D

Explanation:

The scenario describes a situation where the interface misleads users into making serious financial mistakes due to poor design, such as confusing decimal separators. Even though the system functions correctly, it facilitates critical user errors. This constitutes a major usability risk with potential legal and financial consequences. Therefore, the correct risk to address is increased liability due to financial loss caused by a poorly designed or deceptive interface (option D). The other options focus on usability-related dissatisfaction, resistance, or lack of adoption, which are not the key concern in this scenario.

NEW QUESTION # 29

In a short conversation, a potential customer mentions that accessibility is of great importance to them. What does this mean?

- A. They focus on quantitative usability evaluations
- B. They focus on agile development
- C. They also seek to address users with limitations
- D. They use prototyping in their development process

Answer: C

Explanation:

When a customer emphasizes the importance of accessibility, it means they are concerned with ensuring that users with disabilities or limitations are not excluded from using their products or services. Accessibility is about inclusiveness-providing equal access and opportunity to all users regardless of physical or cognitive ability. Option C directly reflects this understanding. The other options (A, B, and D) are aspects of usability or development methodologies but do not relate to addressing the needs of users with disabilities, which is the core focus of accessibility.
