WGU Web-Development-Applications Exam Syllabus Topics:

Topic	Details
Topic 1	<ul style="list-style-type: none"> Responsive Web Design (RWD) for Browsers and Apps: This section of the exam measures skills of Front-End Designers and covers concepts related to mobile-first layout planning, responsive frameworks, and techniques used to ensure compatibility with modern browsers and applications. Candidates must demonstrate how to adjust elements for better usability on mobile devices and apply responsive strategies that allow a single design to function seamlessly across various environments.
Topic 2	<ul style="list-style-type: none"> Validation, Testing, and Form Development: This section of the exam measures skills of Web Developers and covers the ability to validate code, test web pages for accuracy, and build form components. It includes understanding how to detect errors, ensure compliance with standards, and implement form fields with inline validation to improve user experience. The focus is on creating forms that work reliably, meet usability expectations, and maintain proper data entry flow.
Topic 3	<ul style="list-style-type: none"> Creating Adaptive Web Documents and Pages: This section of the exam measures skills of Front-End Designers and covers the techniques needed to make websites display correctly across traditional desktops and mobile devices. It emphasizes adaptive page layout, flexible formatting, and user-friendly presentation so that content remains readable and functional on screens of different sizes. Candidates are expected to show an understanding of how to create consistent designs that respond smoothly to device changes.
Topic 4	<ul style="list-style-type: none"> HTML5, CSS3, and JavaScript Foundations: This section of the exam measures skills of Web Developers and covers the essential ability to manually code using HTML5, CSS3, and JavaScript to create structured, visually styled, and interactive web content. It focuses on building accurate page layouts, applying modern styling rules, and writing basic scripts that support user interaction. The aim is to ensure candidates can construct professional web documents using current standards and properly integrate all three technologies.

WGU Web-Development-Applications Exam Blueprint: WGU Web

Development Applications - DumpsKing Products Prepare for your Exam in Short Time

The design of our Web-Development-Applications guide training is ingenious and delicate. Every detail is perfect. For example, if you choose to study our learning materials on our windows software, you will find the interface our learning materials are concise and beautiful, so it can allow you to study Web-Development-Applications exam questions in a concise and undisturbed environment. In addition, you will find a lot of small buttons, which can give you a lot of help. Some buttons are used to hide or show the answer. What's more important is that we have spare space, so you can take notes under each question in the process of learning Web-Development-Applications Study Tool. When you start, there will be a timer to help you to time, so that you can finish the problem within the prescribed time and it can create an environment. If you are satisfied with our Web-Development-Applications exam questions, you can make a choice to purchase them.

WGU Web Development Applications Sample Questions (Q58-Q63):

NEW QUESTION # 58

Given the following code:

What does the #item token do?

- A. It locates an HTML5 element by its ID
- B. It specifies a CSS3 property.
- C. It creates an XML element.
- D. It defines a JavaScript function with one parameter.

Answer: A

Explanation:

The #item token in CSS is used to select an HTML element by its ID attribute.

* CSS ID Selector:

* Syntax: The ID selector is prefixed with a hash symbol (#) followed by the ID value of the HTML element.

* Example: If the HTML element has an attribute id="item", it can be selected and styled in CSS as:

```
width: 300px;
}
```

* Functionality:

* Selects an Element: The ID selector targets the specific HTML element with the matching id attribute.

* Specificity: ID selectors have high specificity, meaning they will override styles from type selectors and

NEW QUESTION # 59

A web developer need to ensure that a message appears if the user's browser does not support the audio files on a web page.

How should this designer code the audio element?

```
<audio>
  <source src="audio/song.mp3" type="audio/mpeg" />
</audio>
No mpeg support.
```

- A.
- B.
- C.
- D.

Answer: B

Explanation:

To ensure that a message appears if the user's browser does not support the audio files on a web page, the developer should use the <audio> element correctly. The <audio> element supports fallback content, which is displayed if the browser does not support the specified audio formats.

* Correct Usage:

* Fallback Content: Place the message as fallback content inside the <audio> element. Browsers that do not support the audio format will display this message.

* Example:

```
<audio>
<source src="audio/song.mp3" type="audio/mpeg" />
```

No mpeg support.

</audio>

* Explanation of Options:

* Option A: Incorrect. The alt attribute is not valid for the <source> element.

* Option B: Incorrect. The alt attribute is not valid for the <audio> element.

* Option C: Incorrect. The alt attribute is used incorrectly in the <audio> element.

* Option D: Correct. The message "No mpeg support." is placed correctly as fallback content inside the <audio> element.

:

W3C HTML5 Specification - The audio element

MDN Web Docs - <audio>

Using the fallback content inside the <audio> element ensures that users with unsupported browsers receive a meaningful message, improving the overall user experience.

NEW QUESTION # 60

What does a computer use to read and execute JavaScript code?

- A. A validator
- **B. An interpreter**
- C. A compiler
- D. A virtual machine

Answer: B

Explanation:

(Same as Question 29)

JavaScript engines read and execute scripts using an interpreter, though JIT compilation may occur under the hood.

References:

* MDN Web Docs: JavaScript Engine

* ECMAScript Language Specification

NEW QUESTION # 61

Which property or method requires a minimum of two values to apply?

- A. It requires a minimum of one value to apply
- **B. It requires a minimum of two values to apply.**
- C. It accepts pixel values only.
- D. It accepts Hex values only

Answer: B

Explanation:

This question seems to be about a property or method that requires two values. Without additional context, the most common scenario that fits this description is CSS properties that define sizes or positions with two values. Examples include background-position, margin, padding, etc., where both horizontal and vertical values are needed.

References:

* MDN Web Docs on Background Position

* W3C CSS Backgrounds and Borders Module Level 3

NEW QUESTION # 62

Which code segment creates a slider field that accepts a numeric value ranging from 1 through 10?

- A. `<input type="number" name="sat-level" min="1" max="10">`
- **B. `<input type="range" name="sat-level" min="1" max="10">`**
- C. `<input type="range" name="sat-level" max="10">`
- D. `<input type="number" name="sat-level" max="10">`
