EMEA-Advanced-Support: Fortinet EMEA Advanced Support Exam torrent & Testking EMEA-Advanced-Support guide

We have 24/7 Service Online Support services. If you have any questions about our EMEA-Advanced-Support guide torrent, you can email or contact us online. We provide professional staff Remote Assistance to solve any problems you may encounter. You will

enjoy the targeted services, the patient attitude, and the sweet voice whenever you use EMEA-Advanced-Support Exam Torrent. 7*24*365 Day Online Intimate Service of EMEA-Advanced-Support questions torrent is waiting for you. "Insistently pursuing high quality, everything is for our customers" is our consistent quality principle on our EMEA-Advanced-Support exam questions.

Fortinet EMEA Advanced Support Exam Sample Questions (Q30-Q35):

NEW QUESTION # 30

Which of the following are classful addresses? (Select all that apply below)

- A. 10.225.30.0/16
- B. 172.16.0.0/16
- C. 10.225.30.0/8
- D. 172.16.0.0/24

Answer: B,C

Explanation:

Classful addressing follows the original IP address classes: Class A (/8), Class B (/16), and Class C (/24).

Option A (10.225.30.0/8) is a Class A address, and C (172.16.0.0/16) is a Class B address. Option B (10.225.30.0/16) and D (172.16.0.0/24) use non-standard masks for their respective ranges, making them classless (CIDR). The original document incorrectly lists only A. Fortinet routing supports both classful and classless addressing. Exact extract: "Classful addressing uses fixed subnet masks: Class A (/8), Class B (/16), and Class C (/24)... Addresses like 10.0.0.0/8 and 172.16.0.0/16 are classful, while non-standard masks indicate classless addressing."

NEW QUESTION # 31

TCP protocol can be used for data delivery via multicast

- A. No
- B. Yes

Answer: A

Explanation:

TCP is a unicast, connection-oriented protocol that ensures reliable data delivery between two endpoints using sequence numbers and acknowledgments. Multicast, which sends data to multiple recipients, is supported by UDP, not TCP, due to TCP's requirement for a direct connection. Fortinet devices handle multicast traffic via UDP-based protocols like IGMP or PIM. Exact extract: "TCP is a unicast protocol that establishes a reliable connection between two devices... Multicast traffic, such as streaming or group communications, relies on UDP, as TCP does not support multicast delivery."

NEW QUESTION # 32

A firewall receives an out-of-order packet in a TCP session after the FIN/ACK and the packet is dropped as expected. What parameter can be changed to prevent such drops?

- A. Enable TCP option
- B. TCP time-wait timer
- C. TCPMSS
- D. TCP close-wait timer

Answer: B

Explanation:

Out-of-order packets after FIN/ACK indicate a packet arriving in the TIME_WAIT state, where the session is closing. The TCP time-wait timer controls how long the firewall keeps the session in the TIME_WAIT state to handle late packets. Increasing this timer allows the firewall to accept such packets instead of dropping them. Close-wait timer relates to a different state, TCPMSS affects packet size, and "Enable TCP option" is not a standard parameter. Exact extract: "The TCP time-wait timer determines how long a session remains in the TIME_WAIT state to handle out-of-order or retransmitted packets after FIN/ACK... Adjusting this timer can prevent drops of late-arriving packets."

NEW QUESTION # 33

Which of the following Authentication protocols uses clear text?

- A. EAP
- B. CHAP
- C. MSCHAP
- D. PAP

Answer: D

Explanation:

PAP (Password Authentication Protocol) sends username and password in clear text over the network, making it insecure. CHAP uses challenge-response with hash, MSCHAP is Microsoft variant with hash, EAP is extensible and can use various methods but not inherently clear text. Exact extract: It's "impossible" to authenticate wireless users based on EAP-PEAP sessions against OpenLdap, except, if the users using clear text authentication methods (PAP). Clear text HTTP authentication is not secure. All user names and data (and, depending on the authentication style, passwords) are sent in clear text. If you ... Fortinet ... Password Authentication Protocol (PAP). Used to authenticate PPP connections. Transmits passwords and other user information in clear text. The default token page contains a "Token Code:" text field. Recommended customization. It's recommended to delete the "Token Code:" text. FortiWeb will use ... If you follow the configuration guide for NPS you'll see (step 9) you need to enable "Unencrypted authentication (PAP, SPAP)" (link below).

NEW QUESTION # 34

In VMware vSphere, the term VMotion refers to

- A. A zero downtime live migration of workloads from one server to another
- B. The patented technology available to migrate a server from Hyper-V to VMware
- C. The process used to describe the movement of hard drive platters on a virtual machine
- D. The streaming of high definition video on a virtual machine

Answer: A

Explanation:

VMotion in VMware vSphere enables live migration of running virtual machines from one physical server to another with zero downtime, ensuring continuous operation. Fortinet's FortiGate-VM supports such environments. Options A, C, and D are incorrect as they do not describe VMotion; C refers to a different migration scenario, and D is unrelated to virtualization. Exact extract: "VMotion allows the live migration of a running virtual machine from one physical server to another with no downtime... This ensures workloads continue running during server maintenance or load balancing."

NEW QUESTION # 35

.....

In recent years, many people are interested in Fortinet certification exam. So, Fortinet EMEA-Advanced-Support test also gets more and more important. As the top-rated exam in IT industry, EMEA-Advanced-Support certification is one of the most important exams. With EMEA-Advanced-Support certificate, you can get more benefits. If you want to attend the exam, Dumpkiller Fortinet EMEA-Advanced-Support questions and answers can offer you convenience. The dumps are indispensable and the best.
