As for your concern about the network virus invasion, NCLEX-RN Learning Materials guarantee that our purchasing channel is absolutely worthy of your trust.

NCLEX National Council Licensure Examination(NCLEX-RN) Sample Questions (Q754-Q759):

NEW QUESTION # 754

Which of the following would the nurse expect to find following respiratory assessment of a client with advanced emphysema?

- A. Decreased anteroposterior chest diameter
- B. Increased heart sounds
- C. Collapsed neck veins
- **D. Distant breath sounds**

Answer: D

Explanation:

Explanation

(A) Distant breath sounds are found in clients with emphysema owing to increased anteroposterior chest diameter, overdistention, and air trapping. (B) Decreased heart sounds are present because of the increased anteroposterior chest diameter. (C) A barrel-shaped chest is characteristic of emphysema. (D) Increased distention of neck veins is found owing to right-sided heart failure, which may be present in advanced emphysema.

NEW QUESTION # 755

The nurse documents a client's surgical incision as having red granulated tissue. This indicates that the wound is:

- **A. Healing**
- B. Infected
- C. Necrotic
- D. Not healing

Answer: A

Explanation:

Explanation/Reference:

Explanation:

(A) The wound is not infected. An infected wound would contain pus, debris, and exudate. (B) The wound is healing properly. (C) A necrotic wound would appear black or brown. (D) The wound is healing properly and is filled with red granulated tissue and fragile capillaries.

NEW QUESTION # 756

After the RN is finished the initial assessment of a newborn baby and after the initial bonding between the newborn and the mother has taken place in the delivery room, the RN will bring the newborn to the well-baby nursery. Before the newborn is taken from the delivery room and brought to the well-baby nursery, the RN makes sure that which of the following interventions was completed?

- A. The nurse counts the instruments and sponges with the scrub nurse.
- B. The nurse instills prophylactic ointment in the conjunctival sacs of the newborn's eyes.
- **C. The nurse makes sure the mother and her newborn have been tagged with identical bands.**
- D. The physician verifies the exact time of birth.

Answer: C

Explanation:

Explanation

(A) The delivery room personnel are responsible for verifying time of birth. (B) The scrub and circulating nurses count sponges and instruments. (C) This intervention is done in the nursery. (D) Tagging the mother and infant with identical bands is of utmost importance. The mother wears one band, and the newborn wears two. Identical numbers on the three bands provide identification for the newborn and the birth mother. Every time the newborn is brought to the mother after delivery, those bands are checked to be sure that the numbers are identical.

NEW QUESTION # 757

A 74-year-old obese man who has undergone open reduction and internal fixation of the right hip is 8 days postoperative. He has a history of arthritis and atrial fibrillation. He admits to right lower leg pain, described as "a cramp in my leg." An appropriate nursing action is to:

- A. Elevate right lower extremity with pillows propped under the knee
- B. Assess for pain with plantiflexion
- C. Instruct him to rub the cramp out of his leg
- D. Assess for edema and heat of the right leg

Answer: D

Explanation:

Explanation/Reference:

Explanation:

(A) Calf pain with dorsiflexion of the foot (Homans' sign) can be a sign of a deep venous thrombosis; however, it is not diagnostic of the condition. (B) Swelling and warmth along the affected vein are commonly observed clinical manifestations of a deep venous thrombosis as a result of inflammation of the vessel wall. (C) Rubbing or massaging of the affected leg is contraindicated because of the risk of the clot breaking loose and becoming an embolus. (D) A pillow behind the knee can be constricting and further impair blood flow.

NEW QUESTION # 758

A 25-year-old client is admitted for a tonsillectomy. She tells the nurse that she has had episodes of muscle cramps, weakness, and unexplained temperature elevation. Many years ago her father died shortly after surgery after developing a high fever. She further tells the nurse that her surgeon is having her take dantrolene sodium (Dantrium) prophylactically prior to her tonsillectomy. Dantrolene sodium is ordered preoperatively to reduce the risk or prevent:

- A. Malignant hyperthermia
- B. Infection postoperatively
- C. Fever postoperatively
- D. Neuroleptic malignant syndrome

Answer: A

Explanation:

Explanation

(A, D) Dantrolene sodium is a peripheral skeletal muscle relaxant and would have no effect on a postoperative infection. (B) Dantrolene sodium is indicated prophylactically for clients with malignant hyperthermia or with a family history of the disorder. The mortality rate for malignant hyperthermia is high. (C) Neuroleptic malignant syndrome is an exercise-induced muscle pain and spasm and is unrelated to malignant hyperthermia.

NEW QUESTION # 759

.....
