Luckily, we are going to tell you a good new that the demo of the CIPM study materials are easily available in our company. If you buy the study materials from our company, we are glad to offer you with the best demo of our study materials. You will have a deep understanding of the CIPM Study Materials from our company, and then you will find that the study materials from our company will very useful and suitable for you to prepare for you CIPM exam.

IAPP CIPM (Certified Information Privacy Manager) Certification Exam is designed for individuals who are looking to advance their privacy management career. CIPM exam covers a wide range of privacy management topics such as privacy program governance, privacy program operational lifecycle, privacy compliance, and privacy risk management. Certified Information Privacy Manager (CIPM) certification is intended for professionals who are responsible for managing an organization's privacy program or who are looking to start a career in privacy management.

IAPP CIPM Exam is a computer-based exam that consists of 90 multiple-choice questions. CIPM exam is timed, and candidates are given 2.5 hours to complete it. CIPM exam is offered in multiple languages, and the passing score is 300 out of 500. CIPM exam fee includes one year of IAPP membership, access to the IAPP website, and a digital badge to showcase the candidate's achievement.

Updated and Error-free TestKingFree IAPP CIPM Exam Questions

A TestKingFree support team is on hand to help CIPM exam applicants use the IAPP CIPM practice tests and address any problems. The goal is to help candidates crack the CIPM exam in one go. Free IAPP CIPM demo and up to 1 year of free IAPP CIPM Questions are also available at TestKingFree. So, start preparation with real Certified Information Privacy Manager (CIPM) (CIPM) questions right away if you wish to pass the test while saving time and money.

Achieving the CIPM certification demonstrates an individual's commitment to privacy management and their ability to effectively manage privacy programs within organizations. It can also lead to career advancement opportunities and increased earning potential. Overall, the IAPP CIPM Exam is a valuable certification for professionals looking to enhance their privacy management skills and knowledge.

IAPP Certified Information Privacy Manager (CIPM) Sample Questions (Q64-Q69):

NEW QUESTION # 64
SCENARIO
Please use the following to answer the next QUESTION:

Martin Briseño is the director of human resources at the Canyon City location of the U.S. hotel chain Pacific Suites. In 1998, Briseño decided to change the hotel's on-the-job mentoring model to a standardized training program for employees who were progressing from line positions into supervisory positions. He developed a curriculum comprising a series of lessons, scenarios, and assessments, which was delivered in-person to small groups. Interest in the training increased, leading Briseño to work with corporate HR specialists and software engineers to offer the program in an online format. The online program saved the cost of a trainer and allowed participants to work through the material at their own pace.

Upon hearing about the success of Briseño's program, Pacific Suites corporate Vice President Maryanne Silva-Hayes expanded the training and offered it company-wide. Employees who completed the program received certification as a Pacific Suites Hospitality Supervisor. By 2001, the program had grown to provide industry-wide training. Personnel at hotels across the country could sign up and pay to take the course online.

As the program became increasingly profitable, Pacific Suites developed an offshoot business, Pacific Hospitality Training (PHT). The sole focus of PHT was developing and marketing a variety of online courses and course progressions providing a number of professional certifications in the hospitality industry.

By setting up a user account with PHT, course participants could access an information library, sign up for courses, and take end-of-course certification tests. When a user opened a new account, all information was saved by default, including the user's name, date of birth, contact information, credit card information, employer, and job title. The registration page offered an opt-out choice that users could click to not have their credit card numbers saved. Once a user name and password were established, users could return to check their course status, review and reprint their certifications, and sign up and pay for new courses. Between 2002 and 2008, PHT issued more than 700,000 professional certifications.

PHT's profits declined in 2009 and 2010, the victim of industry downsizing and increased competition from e- learning providers. By 2011, Pacific Suites was out of the online certification business and PHT was dissolved. The training program's systems and records remained in Pacific Suites' digital archives, un- accessed and unused. Briseño and Silva-Hayes moved on to work for other companies, and there was no plan for handling the archived data after the program ended. After PHT was dissolved, Pacific Suites executives turned their attention to crucial day-to-day operations. They planned to deal with the PHT materials once resources allowed.

In 2012, the Pacific Suites computer network was hacked. Malware installed on the online reservation system exposed the credit card information of hundreds of hotel guests. While targeting the financial data on the reservation site, hackers also discovered the archived training course data and registration accounts of Pacific Hospitality Training's customers. The result of the hack was the exfiltration of the credit card numbers of recent hotel guests and the exfiltration of the PHT database with all its contents.

A Pacific Suites systems analyst discovered the information security breach in a routine scan of activity reports. Pacific Suites quickly notified credit card companies and recent hotel guests of the breach, attempting to prevent serious harm. Technical security engineers faced a challenge in dealing with the PHT data.

PHT course administrators and the IT engineers did not have a system for tracking, cataloguing, and storing information. Pacific Suites has procedures in place for data access and storage, but those procedures were not implemented when PHT was formed. When the PHT database was acquired by Pacific Suites, it had no owner or oversight. By the time technical security engineers determined what private information was compromised, at least 8,000 credit card holders were potential victims of fraudulent activity.

What key mistake set the company up to be vulnerable to a security breach?

- A. Failing to outsource training and data management to professionals
- B. Neglecting to make a backup copy of archived electronic files
- C. Overlooking the need to organize and categorize data
- D. Collecting too much information and keeping it for too long

Answer: C

NEW QUESTION # 65

(The best way for an organization to stay aware of changes made by vendors that may then impact the organization's privacy practices is to?)

- A. Employ controls for vendor access to shared data.
- B. Conduct periodic vendor technology privacy impact assessments
- C. Include data definitions in each technology vendor contract.
- D. Enforce relevant notification obligations under the data processing agreements with vendors.

Answer: D

Explanation:
The most reliable operational control is to require and enforce vendor notification obligations (e.g., changes to subprocessors, hosting location, security controls, product features affecting processing, incident events).
Periodic assessments help, but they are point-in-time; contractual notification creates a continuous feed of changes that could affect privacy compliance.

NEW QUESTION # 66

SCENARIO
Please use the following to answer the next QUESTION:

Henry Home Furnishings has built high-end furniture for nearly forty years. However, the new owner, Anton, has found some degree of disorganization after touring the company headquarters. His uncle Henry had always focused on production - not data processing - and Anton is concerned. In several storage rooms, he has found paper files, disks, and old computers that appear to contain the personal data of current and former employees and customers. Anton knows that a single break-in could irrevocably damage the company's relationship with its loyal customers. He intends to set a goal of guaranteed zero loss of personal information.

To this end, Anton originally planned to place restrictions on who was admitted to the physical premises of the company. However, Kenneth - his uncle's vice president and longtime confidante - wants to hold off on Anton's idea in favor of converting any paper records held at the company to electronic storage. Kenneth believes this process would only take one or two years. Anton likes this idea; he envisions a password- protected system that only he and Kenneth can access.

Anton also plans to divest the company of most of its subsidiaries. Not only will this make his job easier, but it will simplify the management of the stored data. The heads of subsidiaries like the art gallery and kitchenware store down the street will be responsible for their own information management. Then, any unneeded subsidiary data still in Anton's possession can be destroyed within the next few years.

After learning of a recent security incident, Anton realizes that another crucial step will be notifying customers. Kenneth insists that two lost hard drives in Question are not cause for concern; all of the data was encrypted and not sensitive in nature. Anton does not want to take any chances, however. He intends on sending notice letters to all employees and customers to be safe.

Anton must also check for compliance with all legislative, regulatory, and market requirements related to privacy protection. Kenneth oversaw the development of the company's online presence about ten years ago, but Anton is not confident about his understanding of recent online marketing laws. Anton is assigning another trusted employee with a law background the task of the compliance assessment. After a thorough analysis, Anton knows the company should be safe for another five years, at which time he can order another check.

Documentation of this analysis will show auditors due diligence.

Anton has started down a long road toward improved management of the company, but he knows the effort is worth it. Anton wants his uncle's legacy to continue for many years to come.

Which important principle of Data Lifecycle Management (DLM) will most likely be compromised if Anton executes his plan to limit data access to himself and Kenneth?

- A. Practicing data minimalism.
- B. Ensuring adequacy of infrastructure.
- C. Implementing clear policies.
- D. Ensuring data retrievability.

Answer: A

NEW QUESTION # 67
Which of the following is a physical control that can limit privacy risk?

- A. Tokenization.
- B. Keypad or biometric access.
- C. Encryption.
- D. user access reviews.

Answer: B

Explanation:
A physical control that can limit privacy risk is keypad or biometric access. This is a type of access control that restricts who can enter or access a physical location or device where personal data is stored or processed. Keypad or biometric access requires a code or a biological feature (such as a fingerprint or a face scan) to authenticate the identity and authorization of the person seeking access. This can prevent unauthorized access, theft, loss, or damage of personal data by outsiders or insiders, .
