認定するUiPath-ADAv1試験情報試験-試験の準備方法-便利なUiPath-ADAv1受験準備

UiPathのUiPath-ADAv1試験のための資料を探していますか。資料の整理に悩んでいますか。JPNTTestは最高のウェブサイトとしてあなたに最も全面的な資料を準備しています。現在あなたは資料を探す時間を節約してUiPathのUiPath-ADAv1試験のために直ちに準備できます。

UiPath Automation Developer Associate v1 Exam 認定 UiPath-ADAv1 試験問題 (Q298-Q303):

質問 # 298

Which server-side API debug log method is available for scoped applications?

- A. **gs.info()**
- B. gs.print()
- C. gs.log()
- D. gs.debugLog()

正解: A

解説:

Comprehensive and Detailed Explanation:

In ServiceNow Scoped Applications, not all logging methods available in the GlideSystem (gs) API for global applications are permitted. The correct method for logging debug information in a Scoped Application is gs.info().

* Option A (gs.log()) (Incorrect):

* gs.log() is available in Global Applications but is restricted in Scoped Applications due to security and namespace isolation.

* Option B (gs.print()) (Incorrect):

* gs.print() is primarily used for testing in background scripts and does not write logs to the system log (syslog). It is not intended for debugging in a production environment.

* Option C (gs.debugLog()) (Incorrect):

* This method does not exist in ServiceNow's GlideSystem API and is therefore incorrect.

* Option D (gs.info()) (Correct):

* gs.info() is the correct method for writing informational log messages in Scoped Applications.

* It allows developers to record important debug or operational messages while adhering to scoped security restrictions.

Example Usage:

```
javascript
```

```
CopyEdit
```

```
gs.info("This is a debug message from a Scoped Application");
```

This will write the message to the System Log (syslog), viewable under System Logs > System Log in the ServiceNow instance.

質問 # 299

What are the three source control plug ins found in the backstage view of UiPath Studio in Home - Tools - Plugins?

- A. GIT, CVS, TFS
- B. **GIT, SVN, TFS.**
- C. GIT, SVN, Mercurial
- D. GIT, CVS, Bitbucket.

正解: B

解説:

UiPath Studio supports three main source control plugins that can be found in the Backstage View under Home # Tools # Plugins:

* GIT (GitHub, GitLab, Bitbucket) - Used for version control with repositories.

* SVN (Apache Subversion) - A centralized version control system.

* TFS (Azure DevOps Server) - Microsoft's Team Foundation Server for version control and project management.

Why not the other options?

* A (GIT, SVN, Mercurial) # Mercurial is not supported in UiPath Studio.

* C (GIT, CVS, TFS) # CVS (Concurrent Versions System) is outdated and not supported in UiPath.

* D (GIT, CVS, Bitbucket) # Bitbucket is a hosting service, not a version control system itself.

質問 # 300

The provided exhibit displays the representation of the "Deadline" field using the yyyy-mm-dd format.

□ In what order should the Queue Items be processed by a single robot executing a Performer workflow?

□

正解:

解説:

□ Explanation:

The Queue Items should be processed by a single robot executing a Performer workflow in the following order:

* EmployeeID1

- * EmployeeID4
- * EmployeeID8
- * EmployeeID3
- * EmployeeID6
- * EmployeeID9
- * EmployeeID5
- * EmployeeID2
- * EmployeeID7

A queue is a container that holds an unlimited number of items that can be processed by a robot¹. A queue item can have a deadline and a priority, which affect the order in which the robot retrieves the items from the queue². The Performer workflow is a part of the REFramework template that processes the queue items using the Get Transaction Item activity³. The order of queue execution is determined by the following rules⁴:

* Items that have a deadline are processed first, in order of priority and according to the set deadline for items with the same priority.

* Items that have no deadline are processed next, in order of priority and according to the rule First In, First Out for items with the same priority.

Based on these rules and the exhibit, the order of queue execution is as follows:

- * EmployeeID1 has the earliest deadline (2050-01-01) and high priority, so it is processed first.
- * EmployeeID4 has the same deadline as EmployeeID1, but normal priority, so it is processed second.
- * EmployeeID8 has the same deadline and priority as EmployeeID4, but it was added later to the queue, so it is processed third.
- * EmployeeID3 has the next earliest deadline (2050-01-02) and high priority, so it is processed fourth.
- * EmployeeID6 has the same deadline as EmployeeID3, but normal priority, so it is processed fifth.
- * EmployeeID9 has the same deadline and priority as EmployeeID6, but it was added later to the queue, so it is processed sixth.
- * EmployeeID5 has no deadline, but high priority, so it is processed seventh.
- * EmployeeID2 has no deadline and normal priority, so it is processed eighth.
- * EmployeeID7 has no deadline and low priority, so it is processed ninth.

質問 # 301

A developer wants to add items to a list of strings using the Invoke Method activity. The list is declared as follows:

□ Based on the information shown in the exhibits, what is the outcome of the Invoke Method activity?

- A. Colors will contain an item with the value "Colors: Yellow".
- **B. Colors will contain an item with the value "Yellow".**
- C. An exception will be thrown.
- D. Colors will contain an item with an empty value.

正解: B

解説:

The Invoke Method activity is used to add items to a list of strings. In this case, the list is declared as "Colors". The outcome of the Invoke Method activity will be that the list "Colors" will contain an item with the value "Yellow". This is because the TargetObject property is set to "Colors", which is the list variable, the MethodName property is set to "Add", which is the method of the list class, and the Parameters property is set to "Yellow", which is the value to be added to the list. (UiPath Studio documentation¹)

質問 # 302

Which of the following statements accurately describes the function of the If activity in a workflow?

- A. It evaluates a boolean condition and creates a single branch that executes both true and false statements sequentially.
- B. It evaluates a set of boolean conditions and branches the workflow execution to the first true condition encountered.
- **C. It evaluates a boolean condition and creates two separate branches for both true and false conditions, executing only one branch.**
- D. It evaluates a boolean condition and runs the branch with the highest priority, regardless of the condition's truthiness.

正解: C

解説:

Comprehensive and Detailed In-Depth Explanation:

The If activity in UiPath is a control flow activity that evaluates a Boolean condition and determines the execution path accordingly:

* If the condition evaluates to True, the workflow executes the Then branch.

* If the condition evaluates to False, the workflow executes the Else branch.

* Only one of the two branches is executed, depending on the condition.

Why the other options are incorrect?

B: The If activity does not have a "priority-based execution"; it simply follows the condition's result.

C: A multi-condition evaluation requires a Switch or Flow Decision activity, not an If activity.

D: If does not execute both branches; only one branch is executed at a time.
