100% Pass 2026 Axis Useful ANVE: Axis Network Video Exam Latest Guide Files

Even though our ANVE training materials have received quick sale all around the world, in order to help as many candidates for the exam as possible to pass the exam and get the related certification at their first try, we still keep the most favorable price for our best ANVE test prep. In addition, if you keep a close eye on our website you will find that we will provide discount in some important festivals, we can assure you that you can use the least amount of money to buy the best product in here. We aim at providing the best ANVE Exam Engine for our customers and at trying our best to get your satisfaction.

Axis Network Video Exam Sample Questions (Q37-Q42):

NEW QUESTION # 37

Closing the aperture at a fixed focal length provides

- A. a shorter depth of field and a higher f-number.
- B. a longer depth of field and a higher f-number.
- C. a longer field of view and a lower f-number.
- D. a shorter field of view and a higher f-number.

Answer: B

Explanation:

Closing the aperture at a fixed focal length increases the f-number (aperture value), resulting in a longer depth of field. This means

that a greater portion of the scene will be in focus, both in the foreground and background. A higher f-number indicates a smaller aperture, which allows less light to enter the lens but enhances the sharpness and clarity of the image over a larger depth. NEW QUESTION # 38

Audio detection can be used

- A. Only with cameras with built in microphone.
- B. In all Axis cameras but an extra intelligent video (IV) module is necessary.
- C. Only in quiet areas.
- D. For detecting a change in decibel levels.

Answer: D

NEW QUESTION # 39

PoE class 3 corresponds to what power level at the PSE?

- A. 30 W
- B. 7.0 W
- C. 15.4 W
- D. 4.0 W

Answer: C

Explanation:

PoE (Power over Ethernet) Class 3 corresponds to a power level of 15.4 W at the Power Sourcing Equipment (PSE). This classification allows the delivery of up to 15.4 W of power over standard Ethernet cables to devices such as IP cameras and VoIP phones. This information is based on the IEEE 802.3af standard, which defines the power levels for different PoE classes. Axis Communications' documentation on PoE standards confirms this power level for Class 3.

NEW QUESTION # 40

Two cameras are streaming 6 Mbit/s each. Approximately how much storage is required to record one hour of video from both streams?

- A. 11.4 GB
- B. 2.6 GB
- C. 5.4 GB
- D. 24.2 GB

Answer: C

Explanation:

To calculate the storage required to record one hour of video from two cameras streaming at 6 Mbit/s each, we use the following steps:

* Total bitrate for both cameras: $6 \text{ Mbit/s} \times 2 = 12 \text{ Mbit/s}$

* Convert Mbit/s to Mbyte/s: $12 \text{ Mbit/s} \div 8 = 1.5 \text{ Mbyte/s}$

* Calculate the total data for one hour: $1.5 \text{ Mbyte/s} \times 3600 \text{ seconds} = 5400 \text{ Mbytes}$

* Convert Mbytes to Gbytes: $5400 \text{ Mbytes} \div 1024 = 5.27 \text{ Gbytes}$

Approximately, the storage required is 5.4 GB.

NEW QUESTION # 41

When using Axis' Corridor Format

- A. Privacy masks block out areas outside the specified corridor width.
- B. The depth of field is automatically adjusted to keep the entire length of a corridor in focus.
- C. Axis PTZ cameras can automatically track people walking down a corridor.
- **D. The image is rotated 90 degrees, changing the aspect ratio to 9:16.**

Answer: D

Explanation:

When using Axis' Corridor Format, the image is rotated 90 degrees, changing the aspect ratio to 9:16. This format is particularly useful for monitoring narrow, vertical areas such as hallways, corridors, and aisles, maximizing the camera's field of view in such environments and ensuring better coverage of the intended area while minimizing wasted pixels on unimportant regions like walls.
