Now we have PDF version, windows software and online engine of the 300-535 certification materials. Although all contents are the same, the learning experience is totally different. First of all, the PDF version 300-535 certification materials are easy to carry and have no restrictions. Then the windows software can simulate the real test environment, which makes you feel you are doing the real test. The online engine of the 300-535 test training can run on all kinds of browsers, which does not need to install on your computers or other electronic equipment. All in all, we hope that you can purchase our three versions of the 300-535 real exam dumps.

Cisco 300-535 certification exam is a challenging test that validates the candidate's expertise in automating and programming collaboration solutions. Automating and Programming Cisco Collaboration Solutions certification is ideal for professionals who want to enhance their programming skills and advance their careers in the collaboration industry. Passing 300-535 Exam will not only showcase the candidate's proficiency in collaboration technology but also demonstrate their ability to develop innovative solutions that can streamline business operations.

Trusted 300-535 Latest Test Materials & Leader in Qualification Exams & Accurate 300-535: Automating and Programming Cisco Collaboration Solutions

If you want to choose the best 300-535 exam bootcamp, you should not miss our 300-535 exam materials. We have not only experienced industries elites who compile the high-quality products but also professional IT staff to develop three formats of our 300-535 study guide and the fast shopping environment. Buyers can enjoy free-worry shopping experience. Besides we provide one year free updates of our 300-535 training braindump and service warranty for buyers. With our 300-535 exam questions, your success is guaranteed.

Cisco Automating and Programming Cisco Collaboration Solutions Sample Questions (Q124-Q129):

NEW QUESTION # 124

An engineer is deploying a Python script to manage network devices through SSH. Which library based on Paramiko is used?

- A. paramiko.agent
- B. netmiko
- C. libssh2

- D. sshmiko

Answer: B

Explanation:

Section: 2.0 Automation APIs and Protocols

Explanation/Reference: <https://pynet.twb-tech.com/blog/automation/netmiko.html>

NEW QUESTION # 125

What is a benefit of implementing a Python virtual environment when initiating a new development project?

- A. standardized and contained runtime configuration without impacting versions or modules of other projects
- B. increase in efficiency of the native Python compiler that enables increased performance in parallelization
- C. auto-generated project stub that has the required boilerplate code implemented already
- D. cross-platform vendor-agnostic environment regardless of the operating system architecture and version

Answer: A

Explanation:

A Python virtual environment provides a standardized and contained runtime configuration, allowing dependencies and versions to be managed per project without impacting other projects on the same system.

NEW QUESTION # 126

Refer to the exhibit. An engineer must change an interface description by adding "-modified" as a suffix. Which code snippet must be added to the box in the code to accomplish this task?

```
import requests
from requests.auth import HTTPBasicAuth
r = requests.get(
    "https://192.168.10.1/restconf/data/native/interface/GigabitEthernet=1",
    headers={"Accept": "application/yang-data+json"},
    auth=HTTPBasicAuth("user", "pass")
)
interface = r.json()
description = interface["Cisco-IOS-XE-native:GigabitEthernet"][0]["description"]
payload = {
    "GigabitEthernet": {
        "name": "1",
        "description": description + "-modified"
    }
}
endpoint = https://192.168.10.1/restconf/data/native/interface/GigabitEthernet
mime = "application/yang-data+json"
```

- A.

```
r = requests.post(
    endpoint,
    headers={"Content-type": "application/json",
    auth=HTTPBasicAuth("user", "pass"),
    xml=payload
)
```

- B.

```
r = requests.patch(  
    endpoint,  
    headers={"Content-type": "application/yang-data  
            +json",  
            auth=HTTPBasicAuth("user", "pass"),  
            json=payload  
    )
```

- C.

```
r = requests.update(  
    endpoint,  
    headers={"Accept": "application/yang-data",  
            auth=BasicAuth("user", "pass"),  
            json=payload  
    )
```

- D.

```
r = requests.patch(  
    endpoint,  
    headers={"Accept": "application/data",  
            auth=BasicAuth("user", "pass"),  
            xml=payload  
    )
```

Answer: B

Explanation:

Chosen option uses the correct requests.patch method, the appropriate Content-type header for YANG-JSON, the correct authentication, and the payload format. This is required to update the interface description through the RESTCONF API.

NEW QUESTION # 127

Refer to the exhibit.

```

def configure_ip_address(interface, ip, length):
    url = BASE_URL + "/data/ietf-interfaces:interfaces/interface={i}".format(
        i = interface
    )
    data = OrderedDict(
        [
            (
                "ietf-interfaces:interface",
                OrderedDict(
                    [
                        ("name", interface),
                        ("type", "iana-if-type:ethernetCsmacd"),
                        (
                            "ietf-ip:ipv6",
                            OrderedDict(
                                [
                                    (
                                        "address",
                                        [OrderedDict([("ip", ip), ("prefix-length", length)])],
                                    )
                                ]
                            )
                        )
                    ]
                )
            )
        ]
    )
    response = requests.put(
        url, auth=(USERNAME, PASSWORD), headers=HEADERS, verify=False, json=data
    )
    print(response.status_code)

configure_ip_address("GigabitEthernet2", "2001:db8:636c:6179:2063:7572:7469:7300", "64")

```

What is the effect of the script on the device?

- A. It replaces the entire configuration for GigabitEthernet2 on the device using RESTCONF.
- **B. It merges the new configuration with the existing configuration on the device using RESTCONF.**
- C. It compares the configuration to the device. If it matches, the device sends back an HTTP 204 status code.
- D. All interfaces except GigabitEthernet2 are reset to their default configurations.

Answer: B

NEW QUESTION # 128

Refer to the exhibit. Which lines of code need to be placed on the snippet where the code is missing to configure the disjoint path in Cisco SR-PCE?

```

(config)# pce
(config)# disjoint-path
(config)# disjoint-path group-id 400 type link
(config-pce-path-group)# 
(config-pce-path-group)# 
(config-pce-path-group)# commit

```

- **A. lsp 1 pcc ipv4 10.200.2.77 lsp-name PE1_PE3
lsp 2 pcc ipv4 192.168.217.32 lsp-name PE2_PE4**
- B. lsp 1 pcc ipv4 10.200.2.77 lsp-name PE1_PE3
lsp 2 pcc ipv4 192.168.217.32 lsp-name PE2_PE4
- C. group 1 pcc ipv4 10.200.2.77 lsp-name PE1_PE3
group 2 pcc ipv4 192.168.217.32 lsp-name PE2_PE4
- D. group 1 pcc ipv4 10.200.2.77 lsp-name PE1_PE3
group 2 pcc ipv4 192.168.217.32 lsp-name PE2_PE4

Answer: A

Explanation:

The correct syntax for associating LSPs with a disjoint path group in Cisco SR-PCE is to use the `lsp` keyword, specify the LSP number, pcc, the IPv4 address, and the LSP name.

NEW QUESTION # 129

.....

At the moment you come into contact with 300-535 learning guide you can enjoy our excellent service. You can ask our staff about what you want to know, then you can choose to buy. If you use the 300-535 study materials, and have problems you cannot solve, feel free to contact us at any time. Our staff is online 24 hours to help you on our 300-535 simulating exam. When you use 300-535 learning guide, we hope that you can feel humanistic care while acquiring knowledge. Every staff at 300-535 simulating exam stands with you.
