Reliable 156-315.81 Exam Blueprint | Test 156-315.81 Lab Questions

The majority of people encounter the issue of finding extraordinary Check Point Certified Security Expert R81 (156-315.81) exam dumps that can help them prepare for the actual CheckPoint 156-315.81 exam. They strive to locate authentic and up-to-date CheckPoint 156-315.81 Practice Questions for the Financials in Check Point Certified Security Expert R81 (156-315.81) exam, which is a tough ask.

CheckPoint Check Point Certified Security Expert R81 Sample Questions (Q351-Q356):

NEW QUESTION # 351

You have enabled "Full Log" as a tracking option to a security rule. However, you are still not seeing any data type information. What is the MOST likely reason?

- A. Data Awareness is not enabled.
- B. Identity Awareness is not enabled.
- C. Logs are arriving from Pre-R81 gateways.
- D. Logging has disk space issues. Change logging storage options on the logging server or Security Management Server properties and install database.

Answer: D

NEW QUESTION # 352

What are possible Automatic Reactions in SmartEvent?

- A. Web Mail, Forward to SandBlast Appliance, SNMP Trap, External Script
- B. Web Mail, Block Destination, SNMP Trap, SmartTask
- C. Web Mail, Block Service, SNMP Trap, SmartTask, Geo Protection
- **D. Mail, SNMP Trap, Block Source, Block Event Activity, External Script**

Answer: D

Explanation:

Explanation

The possible Automatic Reactions in SmartEvent are Mail, SNMP Trap, Block Source, Block Event Activity, and External Script¹. Automatic Reactions are actions that SmartEvent can perform automatically when a specific event occurs². They can help you respond quickly and efficiently to security incidents and threats². The Automatic Reactions are¹:

Mail: This reaction sends an email notification to a specified recipient with the details of the event. You can customize the subject and the body of the email, and use variables to include relevant information.

SNMP Trap: This reaction sends an SNMP trap to a specified SNMP server with the details of the event. You can customize the OID and the community string of the trap, and use variables to include relevant information.

Block Source: This reaction blocks the source IP address of the event from accessing your network for a specified duration. You can choose to block the source on all gateways or on specific gateways. You can also choose to block the source on a specific port or service.

Block Event Activity: This reaction blocks the specific activity that triggered the event from occurring again for a specified duration. You can choose to block the activity on all gateways or on specific gateways. You can also choose to block the activity on a specific port or service.

External Script: This reaction runs an external script on a specified server with the details of the event as arguments. You can use any script that can be executed by the operating system of the server, such as bash, perl, python, etc. You can use variables to include relevant information in the script arguments.

NEW QUESTION # 353

Which of the following is NOT a method used by Identity Awareness for acquiring identity?

- **A. Remote Access**
- B. Active Directory Query
- C. Cloud IdP (Identity Provider)
- D. RADIUS

Answer: A

Explanation:

Identity Awareness uses various methods to acquire identity information. These methods include:

Active Directory Query: Identity Awareness queries Active Directory servers to retrieve user and group information.

Cloud IdP (Identity Provider): Identity Awareness integrates with cloud identity providers such as Microsoft Azure AD, Okta, and Google Workspace.

RADIUS: Identity Awareness can use RADIUS servers to authenticate users.

However, Remote Access is not a method used by Identity Awareness for acquiring identity. Remote Access typically refers to VPN connections, and while Identity Awareness can be used in conjunction with VPNs, it does not directly acquire identity information from remote access connections.

NEW QUESTION # 354

Fill in the blank: With the User Directory Software Blade, you can create user definitions on a(n) _____ Server.

- A. SecurID
- B. NT domain

- C. LDAP
- D. SMTP

Answer: C

Explanation:

Explanation

The User Directory Software Blade allows you to create user definitions on an LDAP server, such as Active Directory, and use them in your security policy. You can also integrate with other user authentication methods, such as SecurID, RADIUS, or TACACS+, but you cannot create user definitions on those servers.

NEW QUESTION # 355

SmartEvent does NOT use which of the following procedures to identify events:

- A. Matching a log against local exclusions
- B. Matching a log against each event definition
- C. Create an event candidate
- D. Matching a log against global exclusions

Answer: A

Explanation:

Explanation

Events are detected by the SmartEvent Correlation Unit. The Correlation Unit task is to scan logs for criteria that match an Event Definition. SmartEvent uses these procedures to identify events:

- * Matching a Log Against Global Exclusions
- * Matching a Log Against Each Event Definition
- * Creating an Event Candidate
- * When a Candidate Becomes an Event
