Plat-Dev-210최고품질 덤프데모 다운로드 완벽한 시험대비 인증덤프

Itexamdump의 제품을 구매하시면 우리는 일년무료업데이트 서비스를 제공함으로써 여러분을 인증시험을 패스하게 도와줍니다. 만약 인증시험내용이 변경이 되면 우리는 바로 여러분들에게 알려드립니다.그리고 최신버전이 있다면 바로 여러분들한테 보내드립니다. Itexamdump는 한번에Salesforce Plat-Dev-210인증시험을 패스를 보장합니다.

최신 Salesforce Developer Plat-Dev-210 무료샘플문제 (Q102-Q107):

질문 # 102

A developer needs to build a DataRaptor Transform to send current weather to both an OmniScript Card Layout. Which of these samples would be valid for the Expected Output JSON?

- A. ☐
- B. ☒
- C. ☐
- D. ☐

정답: B

설명:

According to the Transform External Data Unit, the Expected Output JSON should match the Output Path of the DataRaptor Transform. In option D, the Output Path is Current.CityState, which matches the Expected Output JSON. The other options have different Output Paths that do not match the Expected Output JSON.

Therefore, the correct answer is D.

질문 # 103

A developer is configuring the API URL in an HTTP Action element within an Integration procedure. What is the merge code syntax for passing a Date node from an element named SetValues in the URL?

- A. %SetValues Date
- B. x%SetValues.Date%
- C. {(SetValues. Date)}
- D. (' Setvalues'] ['Date']

정답: C

설명:

The correct syntax for merge codes in Integration Procedure is {(NodeName)}, where NodeName is the name of the JSON node in the data source. The other options are either missing the parentheses or using incorrect symbols.

질문 # 104

A developer needs to display read-only contact information in an OmniScript. The developer will format the information as a table, using merge codes to dynamically include first name, last name, street address, state, postal, code, and country from the data JSON. Which OmniScript element should the developer use to meet this requirement?

- A. Rich text Area
- B. Text Block
- C. Edit Block
- D. Text area

정답: B

설명:

A Text Block element allows the developer to display read-only text in a table format, using merge codes to dynamically include data from the data JSON. A Rich Text Area element is used to display formatted text with images and links. A Text Area element is used to display editable text in a single line or multiple lines.

An Edit Block element is used to display editable fields in a form layout.

질문 # 105

A developer needs to limit the output of a Data Mapper Extract to a maximum of one result. How should the developer configure this?

- A. Use the LIMIT filter on the Extract definition.
- B. Set the Limit property on the action that calls the Data Mapper Extract.

- C. Define a formula with the Filter function.
- D. Use a Custom Output Type when creating the Data Mapper.

정답: B

설명:

According to the OmniStudio DataRaptor Extract documentation, if a developer wants to limit the number of records returned, the best way is to set the "Limit" property on the element or action that is calling the DataRaptor, such as in an Integration Procedure or OmniScript Action.

* A. Set the Limit property on the action that calls the Data Mapper Extract - This is the correct method. The calling context (e.g., OmniScript Action or Integration Procedure) includes a property for setting the limit on query results, which is a recommended and clean method to ensure only one record is retrieved.

Incorrect Options:

- * B. There is no "LIMIT" clause within the DataRaptor Extract definition UI or JSON definition itself.
- * C. Custom Output Type controls the structure, not the quantity of output.
- * D. The Filter function applies conditional logic, not record count.

Salesforce OmniStudio Developer Guide # DataRaptor Extract Configuration

질문 # 106

A developer needs to change some field labels on a FlexCard. The FlexCard is currently deployed to production. The developer that the best course of action is to version the FlexCard rather than cloning it.

Which factor would lead the developer to this decision?

- A. All instances of the FlexCard must be updated with the changes.
- B. The new and current versions will be displayed together on the same target.
- C. The new version of the FlexCard will be used in a new Console, and the current version of the FlexCard should remain unchanged.
- D. Another team member is developing new actions, fields, and styling for the current version of the FlexCard.

정답: A

설명:

Versioning a FlexCard allows the developer to make changes to the FlexCard without affecting the existing instances of the FlexCard. The developer can choose to update all instances of the FlexCard with the new version or keep them as they are. This is useful when the changes are minor and do not affect the functionality or layout of the FlexCard. Cloning a FlexCard creates a copy of the FlexCard with a new name and ID. The developer can make changes to the cloned FlexCard without affecting the original FlexCard. This is useful when the changes are major and require a different configuration or design of the FlexCard. In this case, since all instances of the FlexCard must be updated with the changes, versioning is the best course of action.
