

Fast Download Ping Identity PAP-001: Certified Professional - PingAccess Lab Questions - High-quality VCEDumps Excellect PAP-001 Pass Rate

BONUS!!! Download part of VCEDumps PAP-001 dumps for free: <https://drive.google.com/open?id=1gB5jZJLICoyszrIn1uQMKGoeNF1ZsiFX>

Nowadays, using electronic materials to prepare for the exam has become more and more popular, so now, you really should not be restricted to paper materials any more, our electronic PAP-001 exam torrent will surprise you with their effectiveness and usefulness. I can assure you that you will pass the PAP-001 Exam as well as getting the related certification under the guidance of our PAP-001 training materials as easy as pie. Just have a try on our PAP-001 exam questions, you will love them for sure!

Ping Identity PAP-001 Exam Syllabus Topics:

Topic	Details
Topic 1	General Configuration: This section of the exam measures skills of Security Administrators and introduces the different object types within PingAccess such as applications, virtual hosts, and web sessions. It explains managing application resource properties, creating web sessions, configuring identity mappings, and navigating the administrative console effectively.
Topic 2	Security: This section of the exam measures skills of Security Administrators and highlights how to manage certificates and certificate groups. It covers the association of certificates with virtual hosts or listeners and the use of administrator roles for authentication management.

Topic 3	• General Maintenance and File System: This section of the exam measures the skills of System Engineers and addresses maintenance tasks such as license management, backups, configuration imports or exports, auditing, and product upgrades. It also includes the purpose of log files and an overview of the PingAccess file system structure with important configuration files.
Topic 4	• Installation and Initial Configuration: This section of the exam measures skills of System Engineers and reviews installation prerequisites, methods of installing or removing PingAccess, and securing configuration database passwords. It explains the role of run.properties entries and outlines how to set up a basic on-premise PingAccess cluster.

Authentic PAP-001 Study Materials: Certified Professional - PingAccess Grant You High-quality Exam Braindumps - VCEdumps

We provide free updates of our PAP-001 exam questions to the client within one year and after one year the client can enjoy 50% discount. If clients are old client, they can enjoy some certain discount. Our experts update the PAP-001 guide torrent each day and provide the latest update of our PAP-001 Study Guide to the client. We provide discounts to the client and make them spend less money. If you are the old client you can enjoy the special discounts thus you can save money. So it is very worthy for you to buy our PAP-001 test torrent.

Ping Identity Certified Professional - PingAccess Sample Questions (Q26-Q31):

NEW QUESTION # 26

A financial application should be prompted for step-up authentication on a URL that allows money transfers.

A previous administrator configured rules to be applied on the required application URL. Users are not prompted for step-up authentication when accessing the/sranafemmeneyURL endpoint.

Which two actions should the administrator take? (Choose 2 answers.)

- A. Verify that an authentication requirement rule is applied to the application to see if a user has met the required authentication context
- B. Make sure that the existing rule's authentication requirements contain the appropriate minimum authentication requirements
- C. Verify that a rejection handler rule exists and is applied to the application to see if a user has met the required authentication context
- D. Make sure that the existing rule's token validation contains the appropriate minimum authentication requirements
- E. Create a new identity mapping containing authentication context values and add the mapping to the existing rule

Answer: A,B

Explanation:

Step-up authentication in PingAccess is enforced through Authentication Requirement Rules. If users are not prompted, the likely issues are:

- * The rule is missing from the application/resource.
- * The rule's minimum authentication context does not include MFA.

Exact Extract:

"Authentication requirement rules determine whether PingAccess will challenge a user with additional authentication (such as MFA). Ensure that the rule is applied to the resource and that the authentication context is set correctly."

- * Option A is incorrect - rejection handlers define error handling, not MFA enforcement.
- * Option B is correct - verify the authentication requirement rule is applied.
- * Option C is correct - ensure the rule contains the right MFA requirements.
- * Option D is incorrect - identity mappings do not enforce step-up authentication.
- * Option E is incorrect - token validation rules check validity, not MFA levels.

NEW QUESTION # 27

Which two browsers are supported for the PingAccess Admin console? (Choose 2 answers.)

- A. Microsoft Edge
- B. Opera
- C. Brave
- D. Apple Safari
- E. Google Chrome

Answer: A,E

Explanation:

PingAccess officially supports Google Chrome and Microsoft Edge for the administrative console. Other browsers (Safari, Opera, Brave) may work but are not officially supported.

Exact Extract:

"The PingAccess administrative console is supported on current versions of Google Chrome and Microsoft Edge."

* Option A (Safari) is not officially supported.

* Option B (Opera) is not supported.

* Option C (Google Chrome) is correct.

* Option D (Microsoft Edge) is correct.

* Option E (Brave) is not officially supported.

NEW QUESTION # 28

PingAccess will terminate SSL for multiple proxied applications that share the customer.com URL domain.

The administrator needs different ways to minimize the number of SSL certificates to manage these user-facing applications.

What are two ways this requirement can be met? (Choose 2 answers.)

- A. Assign unique Key Pairs to each Virtual Host
- B. Assign a wildcard certificate to the Engine Listener
- C. Assign a Subject Alternative Name Certificate to the Engine Listener
- D. Assign a Subject Alternative Name Certificate to the Agent Listener
- E. Assign a wildcard certificate to the Agent Listener

Answer: B,C

Explanation:

PingAccess uses Engine Listeners for SSL termination of proxied applications. To minimize the number of certificates, administrators can:

* Use a wildcard certificate (e.g., *.customer.com) on the engine listener.

* Use a Subject Alternative Name (SAN) certificate that covers multiple FQDNs under the customer.com domain.

Exact Extract:

"PingAccess engine listeners can use certificates containing either wildcard entries or Subject Alternative Names to secure multiple applications under a single domain."

* Option A is incorrect - assigning unique key pairs increases, not decreases, certificate management overhead.

* Option B is correct - a wildcard certificate covers all subdomains (e.g., app1.customer.com, app2.customer.com).

* Option C is correct - a SAN certificate lists multiple FQDNs explicitly.

* Option D is incorrect - agent listeners don't handle SSL termination for proxied apps.

* Option E is incorrect for the same reason - agent listeners aren't used for SSL.

NEW QUESTION # 29

What information must be provided when setting the PingFederate Standard Token Provider for the Runtime engines?

- A. Issuer
- B. Host
- C. Port

- D. Client ID

Answer: B

Explanation:

When configuring PingAccess to use PingFederate as the Standard Token Provider for runtime engines, PingAccess must know how to contact PingFederate. The configuration requires the Host (PingFederate base URL).

Exact Extract:

"When configuring the Standard Token Provider, specify the PingFederate host to which PingAccess engines will connect for token validation."

- * Option A (Issuer) is part of OIDC metadata but not required explicitly in this configuration.
- * Option B (Client ID) is needed for OAuth clients but not when defining the token provider connection itself.
- * Option C (Host) is correct - this is required to connect to PingFederate.
- * Option D (Port) may be included within the host definition (host:port) but is not the required field.

Reference: PingAccess Administration Guide - Configuring PingFederate as a Token Provider

NEW QUESTION # 30

An administrator needs to configure a protected web application using the Authorization Code login flow. Which two configuration parameters must be set? (Choose 2 answers.)

- A. OpenID Connect Issuer
- B. Virtual Host
- C. OAuth Client ID
- D. OAuth Token Introspection Endpoint
- E. OpenID Connect Login Type

Answer: C,E

Explanation:

When using the Authorization Code Flow for authentication, PingAccess must be configured with:

- * An OAuth Client ID that identifies the application to the IdP.
- * The OpenID Connect Login Type set to Authorization Code.

Exact Extract:

"When configuring an OIDC web session, specify the OAuth client ID and select the OpenID Connect login type (Authorization Code, Hybrid, or Implicit)."

- * Option A (OAuth Token Introspection Endpoint) is not required for Authorization Code flow - token introspection is used in other cases.
- * Option B (OAuth Client ID) is correct - required for OIDC authorization requests.
- * Option C (OpenID Connect Issuer) is discovered automatically via metadata when you configure the token provider.
- * Option D (Virtual Host) is required for application exposure but not specific to OIDC flow.
- * Option E (OpenID Connect Login Type) is correct - must be set to "Authorization Code." Reference: PingAccess Administration Guide - Configuring OIDC Web Sessions

NEW QUESTION # 31

.....

Because our Ping Identity PAP-001 practice test is a web-based mock test, there is no need for software installation as it works with all of the popular web browsers, including Internet Explorer, MS Edge, Firefox, Chrome, Opera, and Safari. Your preparation for the PAP-001 Certification Exam will go more smoothly because our Ping Identity PAP-001 online practice exam precisely replicates the environment of the actual exam.
