MB-820 Valid Exam Duration - Test MB-820 Guide

Our primary objective is to provide you with Microsoft Dynamics 365 Business Central Developer (MB-820) actual questions to complete preparation for the test in few days. Our product includes Microsoft Dynamics 365 Business Central Developer real questions, desktop practice test software, and web-based practice exam. Keep reading to find out what are the specifications of these formats.

Microsoft Dynamics 365 Business Central Developer Sample Questions

(Q121-Q126):

NEW QUESTION # 121

You plan to create a table to hold client data.

You have the following data integrity requirements:

- * Lookups into other records must be established.
- * Validate if a record exists in a destination record.

You need to select the table field property to use for each requirement.

Which table field property should you use? To answer, select the appropriate options in the answer area.

NOTE: Each correct selection is worth one point.

Answer:

Explanation:

Explanation:

For the data integrity requirements, the table field properties to use are:

- * To establish lookups into other records, use the TableRelation property.
- * To validate if a record exists in a destination record, use the ValidateTableRelation property.

In Business Central, when creating tables to hold data, maintaining data integrity is crucial:

- * TableRelation Property: This property is used to create a relationship between the field in one table and a field in another table, which is typically used for lookups. When you set the TableRelation property on a field, it allows users to select from a list of values that exist in the related table.
- * ValidateTableRelation Property: This property is used to ensure that the value entered in a field matches one of the values in a related table. If a user tries to enter a value that doesn't exist in the related table, an error will occur.

NEW QUESTION # 122

A company uses four objects in development in Business Central.

The company plans to make changes to the objects.

You need to identify the application layer for each object in Visual Studio Code.

Which objects are available in each application layer? To answer, move the appropriate application layer to the correct objects. You may use each application layer once, more than once, or not at all. You may need to move the split bar between panes or scroll to view content.

NOTE: Each correct selection is worth one point.

Answer:

Explanation:

Explanation:

Language table # System layer

Activities Cue table # Base layer

Extension Management codeunit # System layer

Business Unit Card page # Base layer

Application Layers in Business Central:

In Business Central, there are different layers such as Base and System, which represent different levels of the application architecture. Here's a breakdown of where each object is likely to belong based on typical Business Central architecture:

- * Language Table: This table typically belongs to the System layer, as language and localization features are often part of the foundational aspects of the system.
- * Activities Cue Table: This would likely be found in the Base layer because it involves business logic that supports user interface elements (like activity cues) specific to the Business Central application.
- * Extension Management Codeunit: The Extension Management Codeunit likely belongs to the System layer, as it deals with handling extensions, which is closely related to the core system functionality for managing and deploying changes.
- * Business Unit Card Page: This object would typically be part of the Base layer, as it is a business-specific object that handles the user interface for business unit data, part of the core Business Central application.

NEW QUESTION # 123

A company uses Azure Application Insights for Business Central online in its production environment.

A user observes that some job queues go into the failed state and require manual intervention.

You need to analyze job queue lifecycle telemetry.

How should you complete the code segment? To answer, select the appropriate options in the answer area.

NOTE: Each correct selection is worth one point.

☐

Answer:

Explanation:

☐

NEW QUESTION # 124

Note: This question is part of a series of questions that present the same scenario. Each question in the series contains a unique solution that might meet the stated goals. Some question sets might have more than one correct solution, while others might not have a correct solution.

After you answer a question in this section, you will NOT be able to return to it. As a result these questions will not appear in the review screen.

A company plans to optimize its permission sets.

The company has the following permission sets:

☐

You need to provide the following implementation for a third permission set:

- * Create a new Permission Set C that is a composite of Permission Set A and Permission Set B.

- * Assign Permission Set C to a user.

You need to ensure that the user has only read access to the Job table.

Solution: Set the IncludedPermissionSets property to Permission Set A and the Excluded PermissionSets property to Permission SetB.

Does the solution meet the goal?

- A. Yes
- B. No

Answer: B

NEW QUESTION # 125

You are exporting data from Business Central.

You must export the data in a non-fixed length and width in CSV format.

You need to generate an XMLport to export the data in the required format Which Format property value should you use?

- A. XML
- B. VariableText
- C. FixedText

Answer: B

Explanation:

When exporting data from Business Central and the requirement is for the data to be in a non-fixed length and width CSV format, the Format property of the XMLport should be set to VariableText (B). The VariableText format is designed for handling data exports where the fields are separated by a delimiter, such as a comma or tab, which is typical of CSV (Comma-Separated Values) files. This format allows for the flexibility needed when dealing with varying field lengths, as it does not enforce a fixed width for each field, making it ideal for CSV data exports. Setting the Format property to FixedText (C) would enforce a fixed width for each field, which is not suitable for CSV files, while the XML format (A) is used for exporting data in an XML structure, which is different from the CSV format requirements.

NEW QUESTION # 126

.....

In order to make sure your whole experience of buying our MB-820 prep guide more comfortable, our company will provide all people with 24 hours online service. The experts and professors from our company designed the online service system on our MB-820 exam questions for all customers. If you purchasing the MB-820 Test Practice files designed by many experts and professors from our company, we can promise that our online workers are going to serve you day and night during your learning period. And you can enjoy updates of MB-820 learning guide for one year after purchase.
