Our C_SEC_2405 study materials are easy to be mastered and boost varied functions. We compile Our C_SEC_2405 preparation questions elaborately and provide the wonderful service to you thus you can get a good learning and preparation for the C_SEC_2405 Exam. After you know the characteristics and functions of our C_SEC_2405 training materials in detail, you will definitely love our exam dumps and enjoy the wonderful study experience.

SAP Certified Associate - Security Administrator Sample Questions (Q36-Q41):**NEW QUESTION # 36**

An authorization based on what object is required for trusted system access to an SAP Fiori back-end server?

- A. S_SERVICE
- B. S_RFC
- C. S_RFCACL
- D. S_START

Answer: C

Explanation:

For trusted system access to an SAP Fiori back-end server, the authorization object S_RFCACL is required.

S_RFCACL (RFC Authorization for Trusted Systems) controls access in trusted RFC (Remote Function Call) connections, which are used to establish secure communication between the Fiori front-end server and the back-end server. This object ensures that only authorized systems or users can execute RFC calls in a trusted relationship, verifying the calling system's identity and the user's permissions. It is critical for securing Fiori app access, as these apps rely on RFC connections to retrieve data from the back-end. S_START is used for starting Fiori apps, S_SERVICE governs OData service access, and S_RFC controls general RFC access but lacks the trusted system specificity of S_RFCACL. By requiring S_RFCACL, SAP ensures that trusted connections are tightly controlled, preventing unauthorized access and maintaining the integrity of Fiori back-end interactions in SAP S/4HANA systems.

NEW QUESTION # 37

Which log types are available in the Administration Console of Cloud Identity Services? Note: There are 2 correct answers to this question.

- A. Usage logs
- B. Troubleshooting logs
- C. Performance logs
- D. Change logs

Answer: A,D

NEW QUESTION # 38

Which protocol is the industry standard for provisioning identity and access management in hybrid landscapes?

- A. SAML
- B. SCIM
- C. OIDC
- D. SSL

Answer: B

NEW QUESTION # 39

Which object type is assigned to activated OData services in transaction SU24?

- **A. IWSV**
- B. HTTP
- C. G4BA
- D. IWSG

Answer: A

Explanation:

In SAP systems, activated OData services are assigned the object type IWSV (SAP Gateway Business Suite Enablement-Service) in transaction SU24. SU24 is used to maintain authorization defaults for transactions and services, and for OData services, which power SAP Fiori apps, the IWSV object type represents the service definitions required for front-end and back-end communication. When an OData service is activated, its authorization requirements, such as the S_SERVICE authorization object with the SRV_NAME field, are linked to the IWSV type in SU24, ensuring that these are proposed when the service is added to a PFCG role.

The HTTP object type is not used for OData services, G4BA relates to OData V4 services, and IWSG represents service group metadata, not activated services. By associating OData services with IWSV in SU24, SAP ensures that authorization maintenance is streamlined, enabling secure and efficient access to Fiori apps while aligning with the system's authorization framework.

NEW QUESTION # 40

When planning an authorization concept for your SAP S/4HANA Cloud Public Edition implementation, what rules must you consider? Note: There are 2 correct answers to this question.

- A. SAP Fiori apps, dashboards, and displays can be assigned directly to a business role.
- **B. Business roles can be assigned directly to a business user.**
- **C. Business catalogs can be assigned directly to a business role.**
- D. Business catalogs can be assigned directly to a business user.

Answer: B,C

NEW QUESTION # 41

.....
