The SAP C-ACDET-2506 Exam Questions give you a complete insight into each chapter and an easy understanding with simple and quick-to-understand language. The SAP C-ACDET-2506 exam dumps are the best choice to make. The common problem SAP C-ACDET-2506 Exam applicants face is seeking updated and real SAP C-ACDET-2506 practice test questions to prepare successfully for the cherished SAP Certified Associate - Configuring SAP Ariba Strategic Sourcing Suite C-ACDET-2506 certification exam.

SAP C-ACDET-2506 Exam Syllabus Topics:

Topic	Details
Topic 1	<ul style="list-style-type: none">• Project Overview, Roles and Responsibilities: This section of the exam measures the skills of an SAP Cloud Consultant and covers the fundamental understanding of SAP Activate methodology within the context of a cloud implementation project. Candidates are expected to be familiar with the project lifecycle, including phases such as Prepare, Explore, Realize, Deploy, and Run. This part also focuses on identifying key roles and responsibilities within a cloud project team, ensuring clarity in collaboration between consultants, clients, and SAP. It checks whether the consultant understands governance, stakeholder management, and the high-level structure of cloud deployment using SAP best practices.
Topic 2	<ul style="list-style-type: none">• Field Configuration: This domain evaluates the knowledge of an SAP Deployment Specialist and focuses on customizing and configuring business fields in the SAP system according to client-specific needs. This includes adjusting system settings for master data, transaction data, and other essential field-level controls to support business processes effectively. The section tests the candidate's ability to use configuration tools, apply SAP standard templates, and ensure that the field configurations align with the desired operational workflows of the business. It also touches upon validation, testing, and documenting the configuration changes made during the implementation.

Topic 3	<ul style="list-style-type: none"> • Deploy and Migration: This part of the exam assesses the expertise of an SAP Deployment Specialist and focuses on the final deployment of the configured solution and the data migration process. Candidates should demonstrate a solid grasp of how to move configurations from a testing environment into production while minimizing disruption. It also includes knowledge of tools and strategies used for data extraction.

High Pass Rate SAP C-ACDET-2506 Test Dumps Cram is the best for you - Prep4sureGuide

Our company has forged a group of professional experts with the excelsior craftsmanship and a mature service system. The quality of our C-ACDET-2506 latest question is high because our expert team organizes and compiles them according to the real exam's needs and has extracted the essence of all of the information about the test. So our C-ACDET-2506 Certification tool is the boutique among the same kinds of the study materials. Our assiduous pursuit for high quality of our C-ACDET-2506 exam prep creates our top-ranking C-ACDET-2506 test guide and constantly increasing sales volume.

SAP Certified Associate - Configuring SAP Ariba Strategic Sourcing Suite Sample Questions (Q20-Q25):

NEW QUESTION # 20

Which scenarios are applicable when moving templates from the test site to the production site by Intelligent Configuration Manager (ICM)? (Select 2 correct answers)

- **A. Draft templates on the source site are skipped.**
- B. Batch imports are available for templates when migrating configuration bundles.
- **C. New templates that successfully migrated to the production site are in Draft state.**
- D. Published templates with flex master data references in the test site are migrated to the production site during the first migration attempt.

Answer: A,C

Explanation:

ICM only migrates published templates; draft templates are skipped (A). When templates are imported into production, they arrive in draft state by default to allow review and publishing before use (C). Batch imports for templates (B) are not supported; migration is typically handled per template. Flex master data references require manual migration steps and are not migrated automatically during the initial template transfer (D).

NEW QUESTION # 21

How can you create a field label with Italics?

- A. By marking the text in the field and selecting Ctrl-I
- B. By selecting the option "Italic label"
- C. Formatting of a field label is not possible
- **D. By using standard HTML formatting like `<i>label</i>` can be added to the field label**
- E. Find the correct folder

Answer: D

Explanation:

In SAP Ariba, field labels themselves do not support rich text formatting directly in the UI, meaning you cannot use Ctrl-I or a specific "Italic label" toggle to style the label. However, SAP allows the use of basic HTML tags, including `<i>` for italics, in help tip text or validation/error message text associated with fields. By embedding HTML tags like `<i>...</i>`, administrators can add italicized text in these auxiliary field descriptions, enhancing clarity and user guidance.

This is because SAP Ariba's UI rendering engine processes simple HTML in certain field-related text areas but treats field labels as plain text for consistency and localization reasons.

Therefore, the correct method for italicizing field-related text is using HTML tags in Help Tips or validation messages, not in the label

itself.

This behavior is documented in SAP Ariba configuration best practices, emphasizing limited HTML support to maintain UI integrity and accessibility standards.

NEW QUESTION # 22

When performing migration to production for a greenfield customer, which item needs to be made available in production prior to creating the migration in ICM?

- A. Approval Rules
- **B. Users**
- C. Locations
- D. Translations

Answer: B

NEW QUESTION # 23

A customer has requested that a Contracts field be added to an export event. After creating the field, assigning the appropriate checkbox in the advanced section, and publishing, this field still cannot be found in the export. What can be done to rectify this? (Select 2 correct answers)

- A. A custom visibility expression needs to be added stating isVisibleInExport == true
- **B. The data definition needs to be refreshed**
- **C. The field must be accepted and published in the data definition**
- D. Custom fields cannot be added to import/exports

Answer: B,C

Explanation:

To ensure a custom Contracts field appears in export events, it must be accepted and published in the Data Definition within the Integration Manager, which formally exposes it for integrations (B). Also, the Data Definition should be refreshed (D) so that the export metadata is updated. A custom visibility expression is unnecessary, and custom fields can be added to import/export when configured correctly.

NEW QUESTION # 24

During a Bluefield migration, you discover missing flex master data templates. What do you do?

- **A. Rebuild them manually in production**
- B. Ignore them
- C. Defer to post-go-live
- D. Use reporting workaround

Answer: A

Explanation:

In a Bluefield deployment scenario, SAP Ariba requires that all Flex Master Data (FMD) templates and their associated data be present in the Production environment before migrating related configuration elements. If you find missing FMD templates during migration, the recommended approach is to manually recreate the missing templates in Production and load the relevant data. This is essential to maintain integrity because many custom fields depend on these templates, and missing templates can cause migration failures or broken references. Deferring or ignoring the issue risks operational disruptions and data inconsistencies. Reporting workarounds do not address template dependencies and therefore are ineffective. This aligns with SAP's guidance on master data migration within Bluefield scenarios to ensure successful, error-free deployments.

NEW QUESTION # 25
