Salesforce PDI Valid Test Materials: Platform Developer I (PDI) - TestPassKing Spend your Little Time and Energy to prepare

The TestPassKing is committed to ace your Platform Developer I (PDI) (PDI) exam preparation and ensure your success on the first attempt. To achieve this objective the TestPassKing is offering top-rated, real, and updated Platform Developer I (PDI) (PDI) exam questions in three different formats. The names of these formats are PDI PDF dumps file, desktop practice test software, and web-based practice test software.

To prepare for the Salesforce PDI exam, candidates can take the official Salesforce PDI certification training, which covers all the topics and concepts tested in the exam. Candidates can also use various online resources, such as study guides, practice exams, and forums, to prepare for the exam. Once certified, individuals can enjoy a range of benefits, such as increased job opportunities, higher salaries, and access to a global community of Salesforce developers.

Salesforce PDI Certification Exam is an essential certification for developers who work with the Salesforce platform. Passing PDI exam demonstrates that the developer has a deep understanding of the platform and its capabilities, and is capable of designing and developing custom applications that meet the customer's requirements. With this certification, developers can enhance their career prospects and become more valuable to their organizations.

Salesforce PDI (Platform Developer I) Exam is a certification exam designed for individuals who want to demonstrate their proficiency in Salesforce development. PDI exam is ideal for developers who have experience in building custom applications, automating business processes, and integrating systems using the Salesforce platform. The PDI exam covers a wide range of topics

such as Salesforce fundamentals, data modeling, Apex programming, and Lightning components development. Passing PDI exam indicates that the candidate has a deep understanding of Salesforce development best practices and can build high-quality solutions that meet business requirements.

Salesforce Platform Developer I (PDI) Sample Questions (Q123-Q128):

NEW QUESTION # 123
A custom picklist field, Food_Preference__c, exist on a custom object. The picklist contains the following options:
'Vegan','Kosher','No Preference'. The developer must ensure a value is populated every time a record is created or updated. What is the most efficient way to ensure a value is selected every time a record is saved?

- A. Mark the field as Required on the object's page layout.
- B. Set a validation rule to enforce a value is selected.
- C. Mark the field as Required on the field definition.
- D. Set "Use the first value in the list as the default value" as True.

Answer: D

NEW QUESTION # 124
What should a developer do to check the code coverage of a class after running all tests?

- A. View the code coverage percentage for the class using the Overall Code Coverage panel in the Developer Console Tests tab.
- B. View the Code Coverage column in the list view an the Apex Classes page.
- C. View the Class Test Percentage tab on the Apex Class list view in Salesforce Setup.
- D. Select and run the class on the Apex Test Execution page in the Developer Console.

Answer: A

NEW QUESTION # 125
Universal Containers stores the availability date on each Line Item of an Order and Orders are only shipped when all of the Line Items are available. Which method should be used to calculate the estimated ship date for an Order?

- A. Use a CEILING formula on each of the Latest availability date fields.
- B. Use a Max Roll-Up Summary field on the Latest availability date fields.
- C. Use a DAYS formula on each of the availability date fields and a COUNT Roll-Up Summary field on the Order.
- D. Use a LATEST formula on each of the latest availability date fields.

Answer: B

NEW QUESTION # 126
Managers at Universal Containers want to ensure that only decommissioned containers are able to be deleted in the system. To meet the business requirement a Salesforce developer adds "Decommissioned" as a picklist value for the Status _c custom field within the Container _c object.
Which two approaches could a developer use to enforce only Container records with a status of
"Decommissioned" can be deleted?
Choose 2 answers

- A. Before record-triggered flaw
- B. Apex trigger
- C. After record-triggered flow
- D. Validation rule

Answer: B,D

Explanation:
Apex Trigger (Option B):

An Apex trigger can be written on theContainer__cobject to prevent deletion unless theStatus__cfield value is "Decommissioned".
This allows custom logic to be executed during the deletion process.
Apex Triggers Documentation
Validation Rule (Option D):
A validation rule is typically used to enforce conditions during record creation or update. However, it cannot directly restrict deletions.
To ensure deletion restriction, an Apex trigger is more effective.
Not Suitable:
Option A(Before record-triggered flow): Flows triggered "before delete" are not available.
Option C(After record-triggered flow): These occur after a record is deleted, so they cannot prevent the deletion process.

NEW QUESTION # 127

How can a developer check the test coverage of active Process Builder and Flows deploying them in a Changing Set?

- A. Use the Apex testresult class
- B. Use the code Coverage Setup page
- C. Use the Flow properties page.
- D. Use SOQL and the Tooling API

Answer: B

NEW QUESTION # 128

......
