Salesforce Certified Platform App Builder certification covers topics such as data modeling, security, user interface design, and business logic.

Salesforce Certified Platform App Builder Sample Questions (Q241-Q246):

NEW QUESTION # 241
Universal Containers is piloting new features in an existing sandbox and wants to prevent outbound email sends during testing.
What should the app builder do to meet the requirement?

- A. Email deliverability set to system email only.
- B. Email configured for SMTP authentication.
- C. Email deliverability set to no access.
- D. Email relay to the configured host enabled.

Answer: C

Explanation:
Setting email deliverability to no access would prevent outbound email sends during testing in a sandbox. This would ensure that no emails are sent to any users or external email addresses from the sandbox. Setting email deliverability to system email only would still allow some emails to be sent, such as password reset emails or new user emails. Configuring SMTP authentication or email relay would not affect email deliverability in a sandbox

NEW QUESTION # 242

Universal Containers (UC) needs a picklist field called Status on three separate custom objects. UC has a requirement to share the list of values for this field across each object.

- A. Global Picklist Value Set
- B. Related Picklist
- C. Shared Custom Field
- D. Dependent Picklist

Answer: A

Explanation:
When multiple objects require the same picklist values, the correct approach is to create a Global Picklist Value Set (also called a Global Value Set). This allows an organization to maintain one centralized list of picklist values that can be reused across multiple picklist fields on different objects.
* Why C is correct:Exact Extract:"Global value sets let you share the same picklist values with more than one picklist field. A global value set is a set of shared values that you define once and use in multiple custom picklist fields." - Salesforce Help | Global Value SetsThis ensures consistent data values, simplifies maintenance, and makes changes automatically available wherever the global picklist is used.
Why C is correct:Exact Extract:"Global value sets let you share the same picklist values with more than one picklist field. A global value set is a set of shared values that you define once and use in multiple custom picklist fields." - Salesforce Help | Global Value SetsThis ensures consistent data values, simplifies maintenance, and makes changes automatically available wherever the global picklist is used.
* Why not A (Related Picklist):"Related Picklist" is not a valid Salesforce feature.
* Why not B (Shared Custom Field):Salesforce does not provide a "Shared Custom Field" functionality.
Each field belongs to a specific object.
* Why not D (Dependent Picklist):Dependent picklists control available values based on another field's value. They do not allow reuse of a single value list across multiple objects.

NEW QUESTION # 243

Each workflow rule applies to a single object.

- A. False
- B. True

Answer: B

NEW QUESTION # 244

What is a use case for validation rules?

- A. Prevent deals with less than a 10% discount from entering an approval process

- B. Restrict partner Lead visibility to the channel sales team
- C. Ensure zip/postal codes are entered in the correct format
- D. Prevent non-managers from joining a private Chatter Group

Answer: C

NEW QUESTION # 245

DreamHouse Realty wants to import its property records from an external system into Salesforce. The app builder will use an external ID field to house the property ID from the external system.
Which two field types are allowed as an external ID?

- A. Test field
- B. Phone field
- C. URL field
- D. Number field

Answer: A,D

Explanation:
A: Number fields and C: Text fields can be set as External IDs. These field types are suitable for housing unique identifiers from external systems.
