

How Can I Prepare Analytics-Admn-201 Exam Questions In One Week? [2026]

DOWNLOAD the newest Dupleader Analytics-Admn-201 PDF dumps from Cloud Storage for free:
https://drive.google.com/open?id=1HBkpA_vcISBEbJFxFx9SN8hl12i7uO1Dv3

The Dupleader is committed from the day first to ace the Salesforce Certified Tableau Server Administrator (Analytics-Admn-201) exam questions preparation at any cost. To achieve this objective Dupleader has hired a team of experienced and qualified Analytics-Admn-201 certification exam experts. They utilize all their expertise to offer top-notch Salesforce Certified Tableau Server Administrator (Analytics-Admn-201) exam dumps. These Salesforce Analytics-Admn-201 exam questions are being offered in three different but easy-to-use formats.

Salesforce Analytics-Admn-201 Exam Syllabus Topics:

Topic	Details
Topic 1	<ul style="list-style-type: none">• Troubleshooting: This section of the exam measures the skills of Support Specialists and covers resolving common Tableau Server issues. Candidates must know how to reset accounts, package logs, validate site resources, rebuild search indexes, and use analysis reports. It also includes understanding the role of browser cookies and creating support requests when needed.
Topic 2	<ul style="list-style-type: none">• Administration: This section of the exam measures the skills of Tableau Administrators and covers the day-to-day tasks of maintaining Tableau Server. Candidates should understand how to create and manage schedules, subscriptions, backups, and restores, as well as how to use tools such as TSM, Tabcmd, and REST API. It emphasizes monitoring, server analysis, log file usage, and embedding practices. It also includes managing projects, sites, and nested structures, while contrasting end-user and administrator abilities. Knowledge of publishing, web authoring, sharing views, caching, and data source certification is also tested.

Topic 3	<ul style="list-style-type: none"> • Installation and Configuration: This section of the exam measures the skills of Server Engineers and covers the process of installing Tableau Server, understanding installation paths, identity store options, SSO integrations, SSL setup, and silent installs. Candidates also need to demonstrate the ability to configure Tableau Server by setting cache, distributing processes, customizing sites, and configuring user quotas. It further includes adding users, managing their roles and permissions, and applying Tableau's security model at different levels from sites to workbooks.
Topic 4	<ul style="list-style-type: none"> • Connecting to and Preparing Data: This section of the exam measures the skills of Tableau Administrators and covers the basic understanding of Tableau Server's interface, navigation, and overall topology. Candidates are expected to recognize both client and server components, understand how these interact, and know where to find information about versions, releases, and updates. It also focuses on system requirements, including hardware, operating systems, browsers, email configurations, cloud considerations, and licensing models. Additionally, it examines knowledge of server processes, data source types, network infrastructure, and ports needed for a stable deployment.
Topic 5	<ul style="list-style-type: none"> • Migration & Upgrade: This section of the exam measures the skills of System Engineers and covers the process of upgrading and migrating Tableau Server environments. Candidates should understand how to carry out clean reinstalls, migrate servers to new hardware, and maintain backward compatibility during the process.

Analytics-Admn-201 Certification Cost, Latest Analytics-Admn-201 Study Notes

Dumpleader Salesforce Analytics-Admn-201 dumps contain required materials for the candidates. Once you purchase our products, all problems will be readily solved. You can try to use our free demo and download pdf real questions and answers before you make a decision. These exam simulations will help you to understand our products. Widespread scope and regularly update are the outstanding characteristic of Dumpleader Salesforce Analytics-Admn-201 braindump. By choosing it, all IT certifications are ok.

Salesforce Certified Tableau Server Administrator Sample Questions (Q49-Q54):

NEW QUESTION # 49

Which two tasks always require a server administrator? (Choose two.)

- A. Adding users
- B. Adding a site
- C. Locking project permissions
- D. Creating a schedule

Answer: A,B

Explanation:

In Tableau Server, roles and permissions dictate who can perform specific administrative tasks. A "server administrator" has full control over the entire Tableau Server deployment, while site administrators manage specific sites. Some tasks are restricted to server administrators due to their server-wide impact.

Option B (Adding a site): Creating a new site in a multi-site Tableau Server environment is a server-level task that only a server administrator can perform. Sites are logical partitions within the server, and adding a site affects the overall server structure. Site administrators cannot create new sites; they can only manage existing ones.

Option D (Adding users): Adding users to Tableau Server (e.g., via the TSM interface or tabcmd) is a server administrator task when it involves adding users at the server level or assigning them to the default site. While site administrators can add users to their specific site in a multi-site environment, the initial addition of users to the server requires server administrator privileges. The question's phrasing ("always require") suggests a server-wide context, making this a correct choice.

Option A (Creating a schedule): This is incorrect because both server administrators and site administrators can create schedules for tasks like extract refreshes or subscriptions within their scope. It's not exclusive to server administrators.

Option C (Locking project permissions): This is incorrect because locking project permissions can be done by a site administrator or

project leader with appropriate permissions. It's a project-level action, not a server-level task requiring a server administrator.
Reference: Tableau Server Documentation - "Administrative Tasks" (https://help.tableau.com/current/server/en-us/admin_tasks.htm) and "User Management" (<https://help.tableau.com/current/server/en-us/users.htm>).

NEW QUESTION # 50

Which two options can be configured by a server administrator per site? (Choose two.)

- A. Limitation on number of users
- B. Ability to embed credentials
- C. Language and locale
- D. Limitation on storage space

Answer: C,D

Explanation:

Tableau Server supports multi-tenancy via sites, each with customizable settings managed by server or site administrators. Let's analyze what's configurable per site:

* Site Settings: Found in the web UI under Site > Settings > General. Server admins can override site admin settings.

* Option B (Limitation on storage space): Correct.

* Details: Server admins can set a storage quota per site (e.g., 100 GB) to cap disk usage for extracts and workbooks.

* How: In TSM or site settings (if enabled)-e.g., tsm configuration set -k site.storage.quota -v 100000.

* Impact: Prevents one site from monopolizing resources in multi-site deployments.

* Option D (Language and locale): Correct.

* Details: Each site can set its language (e.g., English, French) and locale (e.g., date/number formats).

* How: Site settings UI-e.g., "Language: French, Locale: France."

* Impact: Tailors the user experience per site's audience.

* Option A (Ability to embed credentials): Incorrect.

* Details: Embedding credentials (e.g., in data sources) is a server-wide setting (tsm data-access), not per-site. Site admins can't override it.

* Option C (Limitation on number of users): Incorrect.

* Details: User limits are tied to licenses (server-wide), not configurable per site. Site admins manage user assignments, not quotas.

Why This Matters: Site-specific settings enable tailored governance and resource allocation in multi-tenant environments.

Reference: Tableau Server Documentation - "Site Settings" (https://help.tableau.com/current/server/en-us/site_settings.htm).

NEW QUESTION # 51

You attempt to delete a user who owns content on a Tableau Server. What is the result of the delete action?

- A. The user is deleted, and the user's content is reassigned to the project leader
- B. The user is deleted, and the user's content is reassigned to the server administrator
- C. The user is switched to an Unlicensed site role and is NOT deleted
- D. The user and all of the user's content is deleted

Answer: C

Explanation:

Deleting a user in Tableau Server involves handling their owned content (workbooks, data sources)-let's analyze the process:

* Deletion Rules:

* Ownership Check: Tableau prevents deletion if the user owns content to avoid orphaning it.

* Action: Instead of deleting, the user's site role is set to Unlicensed, retaining their account and content ownership.

* Resolution: An admin must reassign ownership (e.g., via Users > Actions > Change Owner) before deletion.

* Option D (User switched to Unlicensed and NOT deleted): Correct.

* Details: Attempting deletion (e.g., Users > Select User > Actions > Delete) triggers a check. If content exists, the user becomes Unlicensed-still in the system but unable to log in.

* Why: Protects data integrity-content remains accessible for reassignment.

* Option A (Deleted, content to server admin): Incorrect.

* Why: No automatic reassignment to the server admin-manual action is required first.

* Option B (Deleted, content to project leader): Incorrect.

* Why: Project leaders don't automatically inherit content-no such mechanism exists.
 * Option C (User and content deleted): Incorrect.
 * Why: Tableau avoids deleting content with the user-too destructive without explicit intent.
 Why This Matters: This safeguard prevents accidental data loss, ensuring admins manage ownership transitions deliberately.
 Reference: Tableau Server Documentation - "Delete Users" (https://help.tableau.com/current/server/en-us/users_delete.htm).

NEW QUESTION # 52

You use Tableau Desktop 10.5 and plan to publish a visualization to a Tableau Server that runs version 2020.1. You are assigned the Creator site role, and Publisher permissions for a project. What statement correctly describes what happens when you attempt to publish the visualization?

- A. You will see a warning message instructing you that the workbook will be upgraded to a new version
- **B. You will see a warning message instructing you that embedded .tde extracts will be upgraded to .hyper**
- C. You will see an error message instructing you that you are unable to publish the workbook to a newer version of Tableau Server
- D. You will successfully publish the visualization without any errors or warnings

Answer: B

Explanation:

Tableau Desktop and Tableau Server have versioning considerations when publishing content, particularly regarding compatibility between older Desktop versions (e.g., 10.5) and newer Server versions (e.g., 2020.1).

Let's break this down step-by-step:

* Version Context: Tableau Desktop 10.5 was released in 2017 and used the .tde (Tableau Data Extract) format for extracts.

Tableau Server 2020.1, released in 2020, introduced the .hyper extract format (starting with version 10.5, but fully standardized later). When publishing from an older Desktop version to a newer Server version, Tableau ensures backward compatibility but may upgrade certain components.

* Publishing Process: With a Creator site role and Publisher permissions, you have the rights to publish workbooks to the specified project. Tableau Server accepts workbooks from older Desktop versions (e.g., 10.5) and upgrades them to the current Server version (2020.1) during publishing. This process is seamless for the workbook itself, but extracts require special handling.

* Extract Handling: If the workbook contains embedded .tde extracts (stored within the .twb or .twbx file), Tableau Server 2020.1 converts these to .hyper format upon publishing. This conversion is necessary because .hyper replaced .tde as the default extract engine starting in Tableau 10.5 and beyond, offering better performance and scalability. During this process, Tableau Desktop or Server displays a warning to inform the user of the upgrade, as it's a one-way conversion (you can't revert to .tde on the Server).

Now, let's evaluate the options:

* Option A (You will successfully publish without any errors or warnings): Incorrect. While the publishing succeeds, a warning about the .tde to .hyper conversion appears if the workbook contains embedded extracts. Without extracts, no warning occurs, but the question's context implies extracts are likely involved (common in visualizations).

* Option B (Error message: unable to publish to a newer version): Incorrect. Tableau supports publishing from older Desktop versions to newer Server versions. There's no outright error blocking this; compatibility is maintained.

* Option C (Warning: embedded .tde extracts will be upgraded to .hyper): Correct. This is the precise warning displayed when a workbook with .tde extracts is published to a Server version that uses

.hyper. It ensures the user is aware of the format change, which might affect extract refresh schedules or performance expectations.

* Option D (Warning: workbook will be upgraded to a new version): Partially correct but less specific. The workbook is upgraded to 2020.1 compatibility, but the warning focuses on the extract format change (.tde to .hyper), not the workbook version generically. Option C is more accurate.

Why This Matters: The .tde to .hyper shift improves query performance and supports larger datasets, but users need to know about it for planning (e.g., extract refresh schedules might need adjustment). The warning ensures transparency.

Reference: Tableau Server Documentation - "Publish a Workbook" (https://help.tableau.com/current/server/en-us/publish_workbook.htm) and "Hyper Extract FAQ" (https://help.tableau.com/current/server/en-us/hyper_faqs.htm).

NEW QUESTION # 53

If a user already exists as part of a group in Tableau Server, and Active Directory synchronization then applies a minimum site role to the group, what will happen to the existing user's site role?

- A. It will always change to the minimum site role
- B. It will change to the minimum site role only if the minimum site role provides more access
- C. It will never change as a result of synchronization
- D. It will change to the minimum site role only if the minimum site role reduces access

Answer: D

Explanation:

When Tableau Server uses Active Directory (AD) for authentication, group synchronization imports AD groups and assigns a minimum site role (e.g., Viewer, Explorer) to users in that group. This ensures users meet a baseline access level. The behavior for existing users during sync is:

- * If the user's current site role provides more access than the minimum (e.g., Explorer vs. Viewer), their role remains unchanged.
- * If the user's current role provides less access than the minimum (e.g., Unlicensed vs. Viewer), their role is upgraded to the minimum.

This preserves higher privileges while enforcing a floor. "Reduces access" means the minimum role is lower than the current role (e.g., Viewer vs. Explorer), in which case the existing role stays.

- * Option A (It will change to the minimum site role only if the minimum site role reduces access):

Correct. The user's role changes only if the minimum increases access (e.g., Unlicensed to Viewer); otherwise, it stays higher.

- * Option B (It will change only if the minimum provides more access): Incorrect wording. This is the inverse of the actual behavior—change occurs when needed to meet the minimum, not to exceed it.

- * Option C (It will always change): Incorrect. Existing higher roles are preserved.

- * Option D (It will never change): Incorrect. It changes if the current role is below the minimum.

Reference: Tableau Server Documentation - "Synchronize Active Directory Groups" (https://help.tableau.com/current/server/en-us/groups_sync.htm).

NEW QUESTION # 54

.....

If you want to pass the Salesforce Analytics-Admn-201 exam on the first attempt then we suggest you start this journey with Salesforce Analytics-Admn-201 exam dumps. The Salesforce Analytics-Admn-201 PDF dumps file, practice test software, and web-based practice test software, all three Salesforce Analytics-Admn-201 Exam Questions formats are ready for download.
