However, preparing for the The Open Group OGEA-103 exam can be challenging, with potential hurdles like exam anxiety and time

constraints.

The Open Group TOGAF Enterprise Architecture Combined Part 1 and Part 2 Exam Sample Questions (Q20-Q25):

NEW QUESTION # 20

Consider the following descriptions of deliverables consumed and produced across the TOGAF ADM cycle.

Which deliverables match these descriptions?

- A. 1 Architecture Requirements Specification - 2 Request for Architecture Work - 3 Statement of Architecture Work - 4 Architecture Principles
- B. 1 Architecture Principles - 2 Architecture Requirements Specification - 3 Request for Architecture Work - 4 Statement of Architecture Work
- C. 1 Request for Architecture Work - 2 Statement of Architecture Work - 3 Architecture Principles - 4 Architecture Requirements Specification
- D. 1 Statement of Architecture Work - 2 Architecture Principles - 3 Architecture Requirements Specification - 4 Request for Architecture Work

Answer: C

Explanation:

The Request for Architecture Work is a deliverable that is sent from the sponsor and triggers the start of an architecture development cycle. It defines the scope, budget, schedule, and deliverables for a specific architecture project. The Statement of Architecture Work is a deliverable that is produced by the architect and defines the approach and resources needed to complete an architecture project. It forms the basis of a contractual agreement between the sponsor and the architecture organization. The Architecture Principles are a deliverable that is produced by the architect and defines the general rules and guidelines for the architecture work. They reflect the business principles, business goals, and business drivers of the organization. The Architecture Requirements Specification is a deliverable that is produced by the architect and defines the requirements that govern the architecture work. It covers both functional and non-functional requirements as well as constraints and assumptions.

NEW QUESTION # 21

Complete the following sentence:

Presenting different _____ and _____ to stakeholders helps architects to extract hidden agendas principles and requirements that could impact the final Target Architecture

- A. Architecture Views Architecture Viewpoints
- B. Alternatives Trade-offs
- C. Solutions Applications
- D. Business Scenarios Business Models

Answer: A

Explanation:

According to the TOGAF Standard, an architecture view is a representation of a system from the perspective of a related set of concerns¹. An architecture viewpoint is a specification of the conventions for a particular kind of architecture view¹. Presenting different architecture views and architecture viewpoints to stakeholders helps architects to extract hidden agendas, principles, and requirements that could impact the final target architecture. This is because different stakeholders may have different concerns and interests in the system, and by showing them how the system addresses their concerns from different perspectives, the architects can elicit more feedback and validation from them². For example, a business stakeholder may be interested in the business architecture view, which focuses on the business processes, functions, and capabilities of the system³. A security stakeholder may be interested in the enterprise security view, which addresses the security aspects of the system, such as confidentiality, integrity, and availability³. By presenting these views to the respective stakeholders, the architects can ensure that the system meets their expectations and needs, and also identify any potential issues or gaps that may affect the target architecture. NEW QUESTION # 22

Which statement best describes the main purpose of the TOGAF Content Framework?

- A. To drive consistency in the outputs when following the ADM.
- B. To store the artifacts identified in the Architecture Repository.
- C. To prevent gaps in the target architecture deliverable set.
- D. To address IT system concerns relevant to an enterprise.

Answer: A

Explanation:

The TOGAF Content Framework exists to give a detailed model of architectural work products-including deliverables, the artifacts within them, and the architectural building blocks those artifacts represent. The fundamental intent of embedding a Content Framework in TOGAF is to drive greater consistency in the outputs produced when following the Architecture Development Method (ADM). That means regardless of who is doing the architecture work, or in which phase of ADM, the types of outputs, their structure, classification (deliverable # artifact # building block), naming, and relationships remain consistent across the organisation. This structured model ensures that architecture work is systematic, standardised, and comparable across different projects or cycles. It is not primarily a mechanism for storage (that's the role of the repository), nor is it only about addressing IT concerns or preventing gaps - its primary purpose is standardising architecture outputs to support clear communication, reuse, and governance across the enterprise

NEW QUESTION # 23

Which of the following describes the practice by which the enterprise architecture is managed and controlled at an enterprise-wide level?

- A. Architecture governance
- B. Technology governance
- C. Corporate governance
- D. IT governance

Answer: A

Explanation:

According to the TOGAF Standard, 10th Edition, architecture governance is "the practice by which enterprise architectures and other architectures are managed and controlled at an enterprise-wide level" 1. Architecture governance ensures that the architecture development and implementation are aligned with the strategic objectives, principles, standards, and requirements of the enterprise, and that they deliver the expected value and outcomes. Architecture governance also involves establishing and maintaining the architecture framework, repository, board, contracts, and compliance reviews 1. The other options are not correct, as they are not the term used by the TOGAF Standard to describe the practice by which the enterprise architecture is managed and controlled at an enterprise-wide level. Corporate governance is "the system by which an organization is directed and controlled" 2, and it covers aspects such as leadership, strategy, performance, accountability, and ethics. IT governance is "the system by which the current and future use of IT is directed and controlled" 2, and it covers aspects such as IT strategy, policies, standards, and services. Technology governance is "the system by which the technology decisions and investments are directed and controlled" 3, and it covers aspects such as technology selection, acquisition, deployment, and maintenance. Reference: 1: TOGAF Standard, 10th Edition, Part VI: Architecture Governance, Chapter 44: Introduction. 2: TOGAF Standard, 10th Edition, Part I: Introduction, Chapter 3: Definitions. 3: TOGAF Series Guide: Using the TOGAF Framework to Define and Govern Service-Oriented Architectures, Part II: Using the TOGAF Framework to Define and Govern Service-Oriented Architectures, Chapter 5: Technology Governance.

NEW QUESTION # 24

Which section of the TOGAF template for Architecture Principles should describe the relationship to other principles?

- A. Rationale
- B. Statement
- C. Implications
- D. Name

Answer: A

Explanation:

According to the TOGAF template for Architecture Principles, the Rationale section should describe the relationship to other principles, as well as the business benefits and the intentions of adhering to the principle. The Rationale section should use business terminology and point to the similarity of information and technology principles to the principles governing business operations. The

Rationale section should also explain how the principle supports the achievement of the business objectives and key architecture drivers. Reference:
