### WGU Cloud Deployment and Operations Sample Questions (Q48-Q53):

#### NEW QUESTION # 48

(What is used to change stacks across multiple accounts and Regions in a single operation?)

- A. Stack policies
- B. Nested stacks
- C. StackInstance
- D. StackSets

Answer: D

Explanation:

Comprehensive and Detailed Explanation From Exact Extract:

StackSets are used to change stacks across multiple AWS accounts and regions in a single operation, enabling centralized management of infrastructure deployments. StackSets allow administrators to create, update, or delete stacks consistently across specified accounts and regions. The WGU Cloud Deployment and Operations Study Guide (Section 5.4, StackSets) states, "StackSets provide the capability to manage and update stacks across multiple accounts and regions with a single operation, streamlining multi-region deployments." StackInstance, nested stacks, and stack policies do not support this multi-account, multi-region functionality.

#### NEW QUESTION # 49

(What is a patch baseline attached to if it is not defined in Patch Manager?)

- A. Accelerate patch baseline
- B. Baseline data set
- C. Default patch group
- D. Patch process

**Answer: C**

Explanation:

If a patch baseline is not explicitly defined in Patch Manager, it is attached to the default patch group. This default group applies a preconfigured baseline with AWS-recommended patches, ensuring basic compliance for instances without custom baselines. The WGU Cloud Deployment and Operations Study Guide (Section 5.2, Patch Manager) states, "If no custom patch baseline is defined, instances are associated with the default patch group, which uses AWS-provided baseline settings for automatic patch approval." Options A, C, and D are not valid attachments for patch baselines.

#### NEW QUESTION # 50

(Which Performance Insights view provides information on the hardware resource that may be causing a bottleneck?)

- A. Users
- B. Hosts
- C. Statement
- D. Wait event

**Answer: D**

Explanation:

The Wait event view in Amazon RDS Performance Insights provides information on hardware resources (e.g., CPU, I/O, memory) that may be causing bottlenecks by showing wait times for database operations. The WGU Cloud Deployment and Operations Study Guide (Section 7.2, Performance Insights) states, "The Wait event view in Performance Insights identifies resource bottlenecks (e.g., I/O wait times) by analyzing wait states, helping optimize database performance on hardware resources." Users, Hosts, and Statement views focus on different aspects and do not directly address hardware bottlenecks.

#### NEW QUESTION # 51

(An administrator sets up a route table with the default outbound route via an internet gateway and links it to a VPC. Which solution should be used to ensure the route takes effect?)

- A. Create an edge association
- B. Create a subnet association
- C. Configure tags
- D. Configure propagation

**Answer: B**

Explanation:

To ensure the route table with a default outbound route via an internet gateway takes effect, the administrator must create a subnet association, linking the route table to specific subnets within the VPC. This association applies the routing rules to the subnet's traffic. The WGU Cloud Deployment and Operations Study Guide (Section 3.2, VPC Routing) states, "A route table must be associated

with a subnet (subnet association) to enforce routing rules, such as the default route to an internet gateway, ensuring outbound traffic follows the defined path." Propagation, tags, and edge associations do not activate the route.

### NEW QUESTION # 52

(Which service enables a company to enforce and manage governance rules across multiple AWS accounts?)

- A. Security Hub
- **B. Control Tower**
- C. GuardDuty
- D. Systems Manager

**Answer: B**

Explanation:

AWS Control Tower enables a company to enforce and manage governance rules across multiple AWS accounts by setting up a landing zone with preconfigured policies for security, compliance, and operations. It simplifies multi-account management. The WGU Cloud Deployment and Operations Study Guide (Section 6.5, Control Tower) states, "Control Tower provides a centralized solution to establish and enforce governance rules across multiple accounts, using guardrails and a landing zone to ensure compliance with organizational policies." Security Hub, GuardDuty, and Systems Manager do not offer this multi-account governance capability.
