Salesforce Order Management Administrator Accredited Professional Sample Questions (Q80-Q85):

NEW QUESTION # 80

In which two ways can order management license be assigned? (choose 2)

- A. By user
- B. By role
- C. By profile
- D. By permission set

Answer: A,D

NEW QUESTION # 81

An admin is analyzing project requirements and notes that there are requirements to support both high volume and multiple locations. What is the recommended approach for this scenario?

- A. Download the Single Location High Volume sample flow from the Partner Community and modify all the flows to loop through locations
- B. Download the Single Location High Volume sample flow from the Partner Community and have the developers add Apex code to enhance performance
- C. Download the Single Location High Volume sample flow and the Multiple Locations sample flow from the Partner Community and make a blend between the two considering trade-offs
- D. Download the Multiple Locations sample flow from the Partner Community and have developers add Apex code to enhance performance

Answer: C

Explanation:

The Single Location High Volume sample flow and the Multiple Locations sample flow are two examples of how to implement order fulfillment with Order Management. The Single Location High Volume sample flow is optimized for performance and scalability, but it only supports one fulfillment location per order. The Multiple Locations sample flow supports multiple fulfillment locations per order, but it has lower performance and scalability. To support both high volume and multiple locations, an admin can download both sample flows from the Partner Community and make a blend between them, considering trade-offs such as complexity, maintainability, and customizability. References: Order Fulfillment Flows, Partner Community

NEW QUESTION # 82

A user wants to review credit card payment data for a specific Order. Which object should the employee navigate to?

- A. Order
- **B. Order Payment Summary**
- C. Payment
- D. Payment Method

Answer: B

Explanation:

The object that the user should navigate to to review credit card payment data for a specific Order is Order Payment Summary. An Order Payment Summary is a record that represents a payment made for an order or part of an order. An Order Payment Summary has a lookup relationship to both Order Summary and Invoice objects, and it contains information such as the payment amount, method, status, etc. Verified References:

NEW QUESTION # 83

How can an administrator quickly examine the relationships between several objects?

- A. File a support case asking for a data relationship diagram
- B. Generate an Entity Relationship Diagram by going to Data in Setup
- C. Download it from the Partner Community
- **D. Go to Schema Builder and check the boxes next to the object names**

Answer: D

Explanation:

The best way for an administrator to quickly examine the relationships between several objects is to go to Schema Builder and check the boxes next to the object names. Schema Builder is a tool that allows administrators to view and modify the data model of their org in a graphical interface. Schema Builder shows the objects and fields in the org, as well as the relationships between them. The administrator can use Schema Builder to select the objects that they want to examine, and see how they are connected to each other. Verified Reference: https://help.salesforce.com/s/articleView?id=sf.schema_builder.htm&type=5

NEW QUESTION # 84

An administrator has created a flow but during testing they encounter an unhandled fault error. Which three can the administrator do to get more details for debugging?

- **A. Create a fault connector**
- **B. Add a Display Text component which includes `{! SFLOW.FaultMessage}`**
- C. Add an error node
- **D. Create an error connector**
- E. Add a screen node

Answer: A,B,D

Explanation:

Three things that the administrator can do to get more details for debugging when encountering an unhandled fault error are: Create a fault connector. A fault connector is a special type of connector that handles errors that occur in a flow element, such as an assignment, a loop, or an action. A fault connector can route the flow to another element or end the flow with an error message.
